A PRIMER ON ENRON: LESSONS FROM A PERFECT STORM OF FINANCIAL REPORTING, CORPORATE GOVERNANCE AND ETHICAL CULTURE FAILURES

MARIANNE M. JENNINGS*

I. INTRODUCTION

As the stories of the collapse of Enron Corporation (Enron)\(^1\) and the travails of its outside auditor, Arthur Andersen (Andersen), emerged\(^2\) the usual...
questions arose: Where were the auditors? Where was the audit committee? Where were the lawyers? Where was the Board?4

However, the story of Enron and its ripple effect on Andersen is far too complex of a tale to enable a simple point of the finger and clear placement of blame.5 The more accurate question is, "What went wrong here?"6 The

Dec. 3, 2001, at A1. While the author recognizes that this piece focuses on the Enron collapse, the WorldCom debacle will be another 300-footnote piece. How on earth does a company hide $9 billion in expenses? A walk-in closet won’t even hold the receipts. Andersen was also the auditor for WorldCom and it is safe to say that Andersen auditors were not the sharpest tools in the shed when it came to ballpark figures on earnings and expenses. "Close enough" was apparently their model.

2. Between the period of September 2001 and June 2002, when Andersen was convicted of obstruction of justice, the number of Enron stories was remarkable. Simply take a gander at the sources in the footnotes in this piece. See infra all my footnotes.

4. Additionally, many have asked post-bankruptcy, as they realize that the earnings were not only unrealized, but unrealistic and largely nonexistent, “Where was the money?” Another frequent question is, “Where were the analysts?” The analysts generally pose that question because they have become generally confused about where they are supposed to be and what they are supposed to do; apparently no one was aware of this confusion regarding analysts’ roles prior to Enron. At any rate, the New York Attorney General, Eliot Spitzer, found the analysts, or, more relevantly, found the analysts’ e-mails to each other. Mr. Spitzer summarized the emails saying, “[A]t the very moment they were telling us to buy this stock, invest more of your money in it, they were saying internally, there is absolutely no reason to own this stock. [...]. It’s a dog.” Now with Bill Moyers (PBS television broadcast, May 31, 2002). Mr. Spitzer continued, “This correspondence shows that the people writing stock reports at times functioned essentially as sales representatives for the firm’s investment bankers.” Patrick McGeehan, Merrill Lynch Under Attack as Giving Out Tainted Advice, N.Y. TIMES, Apr. 9, 2002, at C1. Mr. Spitzer not only found the analysts, he extracted a rather tidy sum from Merrill Lynch. Merrill Lynch settled its case for $100 million, an apology to investors, and disclosure of any investment bank fees it received during the past twelve months for companies whose stock its analysts had recommended. Charles Gasparino, Merrill Lynch to Pay Big Fine, Increase Oversight of Analysts, WALL ST. J., May 22, 2002, at A1. Other firms are under investigation for analyst behaviors and the SEC has joined Mr. Spitzer in the investigations. Charles Gasparino, New York Attorney General Turns up Heat on Wall Street, WALL ST. J., Apr. 10, 2002, at C1; see also Charles Gasparino, SEC Launches Inquiry into Wall Street Research, WALL ST. J., May 1, 2002, at C3. The negotiations over a settlement, liability and issues for the Wall Street firms continue. Gregory Zuckerman, Wall Street’s Settlement Will be Less Taxing, WALL STREET J., Feb. 13, 2003, C1.

5. Apparently, the tale of Enron was far too complex for even its directors to understand. See infra section III for discussion, including charts and graphs, of the Enron complexity. The author is reminded of a quote from a Wall Street investment banker who left the room as some young hotshots were making a pitch for a company with derivatives, leasebacks, SLOBs, SWATS, FICAS, FUTAS and RUBES. His partners said as he departed, “A little too complex for you?” to which he responded, “The fact that I don’t understand one thing that has been said in this room does not make this a good investment.”

6. Oh, for the days of the 1980s and Gordon Gekko, see WALL STREET (Twentieth Century Fox 1987), when the activity was just insider trading, the motivation was just greed and we could understand what the heck they were doing. Heck, we understood preppie Dan Akroyd’s (Louis Winthrop’s) plan to get even with the Duke Brothers in TRADING PLACES (Paramount Pictures 1983) for giving him Eddie Murphy’s (Billy Ray Valentine’s) life as a street hustler. He got the citrus crop report in advance, lied about its content, had the Dukes
answer to that question is detailed and layered. No singular aspect of corporate governance, audit rules, or corporate compliance programs is responsible. For an Enron to collapse, or for that matter, for any of the companies that collapsed since Enron’s bubble burst,7 required a confluence of events and behaviors, a sort of Perfect Storm8 of Board shortcomings; audit lapses,

bet the wrong way while he bet the right way on the price of citrus and he bankrupt the Dukes whilst winning Ophelia’s (Jamie Lee Curtis’) hand. Id. Trading on inside information, selling short: those are things Hollywood and we understand. “Complexity allowed Enron to hide the true picture from the capital markets,” was the assessment from Professor Henry T.C. Hu at the University of Texas. Daniel Altman, Contracts So Complex They Imperil the System, N.Y. TIMES, Feb. 24, 2002, § 3, at 1. Enron’s executives were daft, diabolical or stupid. But, there was a great deal going on here besides greed and selling short. These seem to be easy concepts next to Enron’s offshore layers. See infra section II.B and accompanying charts.

7. Since the time of Enron, WorldCom filed for bankruptcy and it claimed that it is the world’s largest bankruptcy. Simon Romero & Rita D. Atlas, WorldCom Files for Bankruptcy: Largest U.S. Case, N.Y. TIMES, July 22, 2002, at A1. Sure, and I have some broadband worth a billion I’d like to sell you and you can capitalize the cost, so no impact on earnings. Wait a minute, that line worked during most of the 1990s. At this point, it is hard to believe it could matter which of these companies is indeed the world’s largest bankruptcy. Who knows, there may be other surprises out there. WorldCom had to restate its earnings by several billion; Xerox had to restate its earnings yet another time; and Martha Stewart is making soufflés under a cloud of suspicion related to insider trading because she dumped $223,000 of ImClone stock the day before the company, (headed by Martha’s boyfriend, formerly her daughter’s boyfriend), announced that the FDA was not going to approve its new and highly touted anticancer drug, Erbitux. Constance L. Hays & Patrick McGeehan, The Media Business: Advertising; Stewart Broker Handled Shares for Her Friends, N.Y. TIMES, July 3, 2002, at C1. Martha missed her calling—it’s soap opera for which she has a flair, not cranberry root and moss cobbler.

She appeared to be poised to claw the eyes from Jane Clayson’s head. CBS executives had made Ms. Clayson’s questions, about the insider trading allegations, a precondition of Martha’s regular appearance on the show. Ms. Stewart cancelled her next appearance on the show, which was to involve the preparation of icebox desserts. Id. One can distract an audience from insider trading questions with a salad, but icebox desserts just don’t have near the draw.

The former CEO of ImClone Systems, Inc., Samuel Waksal, has been indicted by the U.S. Attorney for fraud and has entered a not guilty plea. Jerry Markon, ImClone Ex-CEO Waksal Pleads Not Guilty to Charges of Fraud, WALL ST. J., Aug. 13, 2002, at A6. Ms. Stewart is under investigation by Congress, the Justice Department and the SEC, who, reportedly, are not happy with inconsistencies and holes in the story that her broker sold merely under a stop-loss order. Constance L. Hays, Investigators Said to Be Frustrated in Stewart Case, N.Y. TIMES, Aug. 12, 2002, at C4.

8. THE PERFECT STORM (Warner Bros. Pictures 2000) based on the book SEBASTIAN JUNGER, THE PERFECT STORM (1998), starred George Clooney as the determined skipper of the Andrea Gail, a swordfish boat. Clooney, crew and the Andrea Gail wind up in the intersection of three major weather fronts, one of which was Hurricane Grace. The result was the “greatest storm recorded in history.” Everyone aboard the Andrea Gail is presumed dead. They pushed the envelope in search of fertile waters (please excuse mixed and inappropriate metaphors) and destroyed themselves. Judging from the charts depicting Enron’s not-so-fertile offshore investments, the executives mixed assets and commingled funds destroying their company, careers, and a good chunk of Houston, Texas. Even the Houston Astros no longer play in Enron Field; it is now the “Minute Maid Park.” Michael McCarthy, Sports Sponsorship Game Heating Up, USA TODAY, June 12, 2002, at B3. Robin Williams refers to
including the assumed watchful eyes of auditors, analysts and business media; and a corporate ethical culture that left those who saw the massive storm front moving in at the last minute, with few or no options, as it were, for shelter.

Litigation and prosecutions related to both Enron and Andersen will continue with the usual goals of assessing blame. However, the quest for it as "Fifth Amendment Field." Robin Williams, Interview on Late Night with David Letterman (CBS television broadcast, July 10, 2002).

9. As of July 2002, the following steps occurred regarding criminal, civil and legislative investigations: Arthur Andersen, LLP, which served as Enron's outside auditors, was charged by the U.S. Department of Justice with one felony count of obstruction of justice for destruction of documents related to its Enron work. Jonathan Weil et al., Editor's Ruling: Andersen Win Lifts U.S. Enron Case, WALL ST. J., June 17, 2002, at A1. Following a six-week jury trial, Andersen was convicted. Id. A federal grand jury was impaneled in March 2002 to investigate Enron and its officers for possible criminal conduct including "fraud, perjury and obstruction of justice." Id. Financial institutions, including commercial banks, are also part of the federal investigation, as well as an independent inquiry by the Manhattan District Attorney's office. Kurt Eichenwald & David Barboza, Enron Criminal Investigation is Said to Expand to Bankers, N.Y. TIMES, June 26, 2002, at A1. Three British bankers were charged with criminal fraud for their involvement with South Hampton L.P., a partnership with Andrew Fastow, Enron's former CFO, as a principal. Kurt Eichenwald, 3 British Bankers are Accused of Fraud in Offshoot of Enron Case, N.Y. TIMES, June 28, 2002, at C1. Connecticut's investigation into its $200 million deal with Enron is sputtering because, as some theorize, there is no heart for looking at corruption in the state. Paul Ziegelbauer, Bureaucratic Finger-Pointing Impedes Connecticut's Inquiry into Enron Deal, N.Y. TIMES, June 20, 2002, at B1. Apparently corruption is as corruption does in Connecticut and it is a classic case of the following conclusion, "Let's not go there." Congress has been conducting ongoing hearings. The Senate Commerce Committee held hearings, beginning in January 2002. Greg Hitt & Kathryn Kranhold, Internal Probe of Enron Finds Wide-Ranging Abuses, WALL ST. J., Feb. 4, 2002, at A3; see also Stephen Labaton & Richard A. Oppel, Jr., Enron's Many Strands: The Overview; Testimony from Enron Executives is Contradictory, N.Y. TIMES, Feb. 8, 2002, at A1.

In fact, by the end of January 2002, six Senate committees, including: Banking; Commerce; Energy and Natural Resources; Finance; Governmental Affairs; and Health, Education, Labor and Pensions had all announced their own hearings on Enron. Jayne O'Donnell & Jim Drinkard, Agencies, Panels Set Hearings on Enron, USA TODAY, Jan. 21, 2002, at 3B. In the House, the following committees announced hearings: Education and Workforce, Energy and Commerce, and Financial Services. Id.; see also Don Van Natta Jr., Enron's Collapse: The Politicians; Enron Spread Contributions on Both Sides of the Aisle, N.Y. TIMES, Jan. 21, 2002, at A13. Andersen and Enron both face shareholder litigation. Jonathan D. Glater, Rivals and Lawyers Vie over Andersen Remains, N.Y. TIMES, June 18, 2002, at C4; Eric Berger, $680 Million Paid to Enron Execs in '01; Lay, Skilling Together Topped $109 Million, HOUS. CHRON., June 17, 2002, at A1. States such as Texas are also conducting probes. The Fall of Enron, HOUS. CHRON., Jan. 25, 2002, at A19. The FBI has been investigating insider-trading issues. Kurt Eichenwald, U.S. Inquiry Tracks Insiders at Enron, N.Y. TIMES, Apr. 15, 2002, at A1. The Justice Department is focusing on the company and its officers via a criminal probe and the Labor Department investigates Enron's retirement plans. Julie Mason, Concerned Ex-Worker Was Sent to Human Resources, HOUS. CHRON., Jan. 31, 2002, at A11. The SEC has, of course, also investigated. Jayne O'Donnell & Jim Drinkard, Agencies, Panels Set Hearings on Enron, USA TODAY, Jan. 21, 2002, at 3B. When a company collapses, can the SEC be far behind? The author realized too late that it would have been easier to list those agencies and committees that are not currently investigating Enron. The Department of Parks and Recreation in Mankato, Minnesota has declined prosecution.

In a major break-through, Michael J. Kopper, the former financial executive under Andrew Fastow, Enron's CFO, entered a guilty plea to money laundering and conspiracy to commit
blame is not a helpful exercise to implement the type of checks and balances that could have provided shelter from the storm or at least created some warning systems so that the collapse was not so sudden as to leave so many with no protection. Enron could not have happened without complicity on many fronts. The examination of that complicity proves helpful in prevention.

An examination of the confluence of these three separate storms provides insight into the types of reforms, regulatory and otherwise, that might prevent other unprecedented collapses or perhaps provide the means of intervention before the three components merge. As in *The Perfect Storm*, an Enron, with its full creative accounting scenario could not have occurred if just one of the three legs of the stool had functioned differently. There are prevention techniques, both minor and those requiring systemic change, applicable in each of the three legs that could serve to halt what otherwise is an inexorable march to destruction.

This analysis proceeds, in Part II with the story of Enron, what happened and when, and the resulting impact on the stakeholders of Enron. Part III examines the events and system flaws that had to come together at one time for Enron to collapse as it did, including the complicity of the parties, the flaws in the various systems created to prevent what happened to and within Enron, including internal audit, external audit, the Board, the audit committee, analysts, underwriters, and the business press. Finally, Part IV offers the prevention tools from the lessons of Enron with a detailed list of changes companies should make in order to prevent the havoc that befalls those whose checks and balances might otherwise fail simultaneously for the creation of the *perfect storm*.

II. THE STORY OF ENRON: WHAT REALLY HAPPENED HERE

When people speak of Enron, they do so quite easily with catch phrases such as, "You mean like Enron?" or "There are hundreds of other Enrons out there." Yet, just as when Enron was in business, it is not at all clear that

---

10. The author recognizes that she once again mixes metaphors, but *Perfect Storm*, *Perfect Stool*, close enough.

11. Post-Enron collapse, one compensation expert summed up Enron as follows, "I am dissatisfied with using fuzzy numbers in doing accounting." Matt Kranz & Del Jones, *Enron’s Fall Fuels Push for Stock Option Law*, USA TODAY, Feb. 8, 2002, at B3. As the discussion following shows, Enron involved a bit more than fuzzy numbers and option reforms won’t fix another Enron. One *Fortune* writer said the collapse of Kmart for mismanagement was the real scandal. Geoffrey Colvin, *It Ain’t All About Enron*, FORTUNE, Feb. 18, 2002, at 44. Mr. Colvin understands Kmart’s collapse was no surprise. *Id.* Martha Stewart caused that. She’s trying to hawk glazed acorn napkin rings to folks who shop at Kmart, who don’t use napkins. Kmart failed because of strategic errors, not knaves running the corporation. There is a differ-
those who reference Enron are able to explain exactly what Enron was doing and why it collapsed. Enron's story is necessarily complex because its complexity is at least a partial explanation as to why it was able to continue in such grandeur for so long with so little in terms of performance and so few realizing, or at least saying aloud, that there were serious issues with a company that could implode at any time.

A. The Initial Years

Enron, Corp. was incorporated in Oregon in 1985, as a simple gas company as a result of a merger of Houston Natural Gas and Internorth of Omaha. With its principal offices in Houston, Texas, it became the "world's largest energy company." While Kenneth Lay, one of the com-
pany’s founders, was an innovator in the energy field, popularizing utilities’ involvement in hedging activities to cover fluctuations in weather and energy pricing, it was not until Harvard MBA, Jeffrey Skilling was hired in 1990 that Enron began its descent (or ascent followed by descent) into leveraged energy trading.16

By the end of 2001, Enron held twenty-five percent of all of the world’s energy trading contracts.17 Enron’s public relations materials describe it as “one of the world’s leading electricity, natural gas and communications companies, which markets electricity and natural gas, delivers physical commodities and financial and risk management services to companies around the world, and has developed an intelligent network platform to facilitate online business.”18 Enron held interests and operated companies on all continents except Antarctica.19 By 2001, it was called the “most innovative company” in America by Fortune, and with $100 billion in annual revenues, it was number seven of the Fortune 500.20

Enron was also one of the world’s most admired corporations, appearing consistently in listings of the “100 Best Companies to Work For,” an annual analysis done by Fortune magazine of companies and their treatment of em-

16. Mr. Skilling came in contact with Enron as a management consultant during his time at McKinsey & Co. John Schwartz, Enron’s Many Strands: The Former C.E.O., Darth Vader, Machiavelli, Skilling Set Intense Pace, N.Y. TIMES, Feb. 7, 2002, at C1. His first position at Enron, in 1990, was director of trading operations. Id.
17. Noelle Knox, Enron to Fire 4,000 from Headquarters, USA TODAY, Dec. 4, 2001, at B1. One of the things you quickly learn in exploring Enron is that all of its rankings were based on the numbers management generated internally, which, as we know now, were spun out of whole cloth. So, when Enron says that it held twenty-five percent of the world’s energy contracts, it is important to understand the concept of restatement. The author refers not to the RESTATEMENT OF CONTRACTS, but rather, to the new activity of most companies, which is restatement of earnings. Enron has restated its earnings, its assets, its equity, ergo the numbers upon which these were based, i.e., contracts for the sale of energy, were, perhaps, bogus, or the stated returns from those contracts were fictitious. The problem with the accuracy of the numbers is exacerbated by the problem of the contracts themselves that no one really understood. In fact, many folks who were parties to Enron contracts were not actually sure what they had purchased or what Enron was offering for sale. See David Barboza, Ex-Executives Say Sham Deal Helped Enron, N.Y. TIMES, Aug. 8, 2002, at A1; Tom Fowler, Broadband-unit Hype Didn’t Match Reality, HOUS. CHRON., Jan. 18, 2002, at A1; Rebecca Smith & John R. Emshwiller, Running on Empty: Enron Faces Collapse as Credit, Stock Dive and Dynegy Bolts, WALL ST. J., Nov. 29, 2001, at A1. Like the dot-coms, Enron sold a great deal of air, but with nice margins, at least as originally reported.
18. Plaintiff’s Complaint at 1, Kaufman v. Enron Corp., No. 4:01-3682 (S.D. Tex., filed Oct. 25, 2001) (on file with California Western Law Review). Enron staked its ground with this description as opposed to the rest of the world that has developed really stupid network platforms.
20. Running on Empty: Enron Faces Collapse as Credit, Stock Dive and Dynegy Bolts, supra note 17. That ranking put it ahead of IBM and AT&T, as far as we knew at that time. Id.; see also supra note 1 for discussion of Enron’s bankruptcy.
ployees. Enron’s outside auditors, from the beginning of the aggressive financial techniques, were Arthur Andersen, with partner David Duncan out of the Houston office assigned to the Enron account. Mr. Duncan had a ten-year relationship with Enron; during the last five he was the partner in charge. As will be noted later, Mr. Duncan played a critical role in Enron’s growth and preparation of earnings statements.

Enron was positioned strategically in the 1980s and 1990s to take a first-mover position and advantage in the energy markets that were moving toward deregulation. Enron seized the opportunity to become an energy

21. Shelly Branch, The 100 Best Companies to Work for in America, FORTUNE, Jan. 11, 1999, at 118. Enron appeared for the first time in the top 100 in 1997. In 2000, it was ranked as #24, and in 2001 it was #22. Robert Levering & Milton Moskowitz, The 100 Best Companies to Work for: These Employers Show No Signs of Cutting Back on Their Commitment to Employees, FORTUNE, Jan. 8, 2001, at 148. Employees had a “[h]ealth club, doctor’s office, subsidized Starbucks coffee, concierge, massages, and car wash” on site. Alexei Barrionuevo, Your Career Matters: Jobless in a Flash, Enron’s Ex-Employees are Stunned, Bitter, Ashamed, WALL ST. J. Dec. 11, 2001, at B1. The key to the options program was running for your life from the company. Fortune was duped for a time, but its writer Bethany McLean eventually came through. Why Enron Went Bust, supra note 15. See infra notes 293-298 and accompanying text for discussion. Enron was, in reality, one of the “100 Best Companies to Work For,” as far as we knew. The company had opulent headquarters and was gearing up to build even bigger and better headquarters when its bubble burst. Of course, Enron was doing the square footage computation on the new company headquarters so it might well be that the square footage was overstated as well. Employees at company headquarters were also able to enjoy one of the many concierges, a masseuse for relieving tension and a service to have their cars washed while they were at work. Workout rooms, generous retirement plans, you name it, and Enron employees had it. Barrionuevo, supra. Actually, the retirement plans also had to be restated because they included large amounts of Enron stock. Enron employees, current and former, now have retirement plans that consist, on average, of about 10,000 shares of Enron stock, valued at $0.67 cents per share. Julie Mason, Former Enron Workers Air Complaints on CNN, HOUS. CHRON., Jan. 21, 2002, at A10. It’s not a posh retirement, just about enough to have your car washed once or twice. Enron Broadband employees got Palm Pilots, cell phones and wireless laptops. Barrionuevo, supra. Enron International employees had authorization for $5,000 bar tabs. Id.

22. Anita Raghavan, Accountable: How a Bright Star at Andersen Fell Along with Enron, WALL ST. J., May 15, 2002, at A1. By all accounts, David Duncan, 43, was a hard-working family man, committed to his local church, and a fast-tracker at Andersen. After graduating from Texas A&M, he became one of Arthur Andersen’s youngest partners and earned $1,000,000 per year, as the managing partner for Enron’s audits. However, as attorney Rusty Hardin, the lead defense lawyer for Andersen in its obstruction of justice case noted, “No question David Duncan was a client pleaser.” Id. Mr. Duncan’s pastor said Enron put the pressure on him, “[h]e basically said it was unrelenting. It was a constant fight. Wherever he drew that line, Enron pushed that line—he was under constant pressure from year to year to push that line.” Id.

23. Id. Mr. Duncan’s office was in the Enron building in Houston and he was a close friend of Enron’s chief accounting officer, Richard Causey—they traveled together, lunched together, golfed together, and now after Duncan’s guilty plea, apparently cooked the books together. Id.; see also Cathy Booth Thomas & Deborah Fowler, Will Enron’s Auditor Sing? TIME, May 20, 2002, at 44. Duncan was bringing in $50 million per year in audit fees from Enron. Id.

24. See infra section III.A.1 and accompanying text and footnotes.

25. The first mover position is one of those “strategery” terms, restated, as it were, in lay terms (pun intended), “No one has thought of your idea yet, so move on in and make as
trader at a time when the federal and state governments opened the doors for utilities to participate in an open market for the wholesale, and eventually retail, purchase and sale of electricity. Just beginning at the time of Enron’s initial seizure, were the creation of national power grids, the spot pricing of electricity, and long-term contract commitments with locked in prices.26 Enron became a new and critical player in this open market because its trading operations allowed electric utilities to hedge risk with futures contracts for energy.27 Enron dominated the market; in fact, utilities around the country often used “the Enron model” as a basis for their strategic discussions and plans.28

much money as you can before they do.” One Enron executive phrased it this way—Enron created a “regulatory black hole . . . [Its] core management philosophy . . . was to be the first mover into a market and to make money in the initial chaos and lack of transparency.” Jeff Gerth & Richard A. Oppel, Jr., Regulators Struggle With a Marketplace Created by Enron, N.Y. Times, Nov. 10, 2001, at C1.

26. Enron Unplugged, supra note 14. Enron was forced to move, because of the heavy debt from the merger that created it and the stiff competition that soon appeared in the industry, from a simple gas and electric company into the role of a broker, middle-man for utilities, in the buying and selling of electricity. “Think of it as an energy eBay with algorithms,” was one description of Enron. Id.

27. Enron did not limit its hedging activity to electricity. It was hedging telecommunications wire load, bandwidth, lumber, and even television ad times. If there were anything that sounded like a bet, Enron would take by creating contracts that went both ways and selling them both ways. Enron was AC/DC on electricity and all forms of futures. For example, it created a market for snowfall, that is, ski lodges could hedge their risk on snowfall. If the snow fell, Enron made money. If the snow didn’t fall, the ski lodge got paid by Enron and was covered for its lost season. Id. Actually, Enron probably sold contracts the other way to people who were betting there would be snow and so Enron was covered no matter what happened with the snowfall. If this all sounds made-up and risky, it was. Bankruptcy at the largest level the U.S. has ever seen, “don’t come easy,” as Ringo Starr would say. RINGO STARR, It Don’t Come Easy, on BLAST FROM YOUR PAST (Apple 1975). See generally Enron Unplugged, supra note 14; see also supra note 1 for an important caveat on bankruptcy rankings.

28. McKinsey & Company, specifically a young consultant, named Jeffrey K. Skilling, was the mastermind of the Enron model. He piloted Enron through the new waters it had charted (note apropos and consistent metaphor for The Perfect Storm theme). Audacious Climb to Success Ended in a Dizzying Plunge, supra note 14.

The Enron model included some market tactics that California and the Federal Energy Regulatory Commission are investigating. Richard A. Oppel, Jr. & Jeff Gerth, Enron Forced Up California Prices, Documents Show, N.Y. Times, May 7, 2002, at A1. For example, “ricochet” or “megawatt laundering” are names for some trading activities of which regulators now question the legality. Id. Enron would buy power in California, transport that power to the national market, and then bring it back into California at a higher price. Enron also used a “Get Shorty” strategy, which employed the sale of power commitments. Id. They would sell the commitments at a high price and then buy its own commitments at a low price. In effect, it was making money selling a service to provide power it knew it would never be forced to provide. Enron also used the “Death Star” strategy of scheduling power it didn’t need to drive up the price and force others to pay the premium prices required to have them forgo use of backed-up transmission lines in periods of high volume (congestion, as they say in the trade). Id. The names are courtesy of Enron traders. The disclosure of the strategies comes from ongoing investigations. See Oppel & Gerth supra; Kathryn Kranhold & Rebecca Smith, Energy Sellers Teamed up in Profit-Boosting Scheme: Role of White’s Unit Raised, Wall St. J., May 9, 2002, at A1. See generally John Swartz, Daschle: Somebody Ought to Go to Jail, USA Today, May 10, 2002, at 5B.
By 1995, Enron was the country’s largest national gas purveyor. In fact, Enron became “the biggest e-commerce company in the world.” Revenues topped $100 billion and Enron began pursuing investments in hard assets, such as power plants and water companies. Enron still sold natural gas, but in long-term contracts that were hedged by other instruments, with Enron taking a cut in all contracts. Enron’s niche, combined with creative and aggressive trading in the boom of the 1990s, saw the company’s share price soar to $83 per share in January 2001 with 20,000 employees and earning nearly $100 billion per year.

As other utilities entered the market for national and international wholesale sales of electricity, however, Enron lost its dominant position and its ability to post the double-digit earnings growth and resulting share price increases its investors, employees, officers, and Board had come to expect. It was during 1999, when Enron executives began to feel the crunch of the market; as a result, multifarious forms of financial creativity were began as a...
means of bolstering earnings and maintaining or increasing the market price of Enron’s shares.36

B. The Creative Years: The Data Behind Enron’s Financial Statements

Enron followed two strategies for maximizing revenue growth. During the late 1990s, Enron expanded itself from energy trader to highly leveraged hedge fund through a series of structural changes.37 Enron transitioned from stodgy energy trader to leveraged hedge fund dealer without alarming shareholders or even analysts because hedge funds have so little regulation in terms of disclosure requirements when run by a power trading company.38 The second strategy involved complex structures that technically complied with the Financial Accounting Standards Board (FASB) rules and therefore, not subject to the long arm of the law.

36. See Enron’s Collapse: Audacious Climb to Success Ended in a Dizzying Plunge, supra note 14. The period between 1999 and Enron’s bankruptcy in December 2001 represented fertile times for officer trading: “Mr. Lay sold Enron stock 350 times, trading almost daily, receiving $101.3 million. In all, Mr. Lay sold 1.8 million Enron shares between early 1999 and July 2001, five months before Enron filed for bankruptcy.” Leslie Wayne, Before Debacle, Enron Insiders Cashed in $1.1 Billion in Shares, N.Y. TIMES, Jan. 13, 2002, at A1. The sales were at prices ranging from $31 to $86 per share. Id. Beginning in December 2000, Mr. Skilling sold his shares at a rate of 10,000 every seven days. Id. A suit by Amalgamated Bank of New York documents what its lawyers call, “the most massive insider bailout that we’ve ever seen. …The overall size of this case is unprecedented.” Id.

Interestingly, Enron began marketing its earnings management techniques to other companies, including AT&T, Eli Lilly & Company, Owens-Illinois, Lockheed Martin, and Qwest Communications. David Barboza, Enron Offered Management Aid to Companies, N.Y. TIMES, Apr. 10, 2002, at C1. One of the techniques touted was “swap[s]”, an area of investigation for Qwest. Id.

37. Gregory Zuckerman, Enron Quietly Ran a Risky Hedge Fund That Did Well, WALL ST. J., Apr. 11, 2002, at C1. Mr. Skilling created the hedge-fund operations in 1996 through an Enron subsidiary called ECT Investments. Id. The benefit of the hedge fund was two-fold: (1) large returns (20%); and (2) regulatory no-man’s land. Id. The result was the ECT could bet high and with leveraged funds with little disclosure required. Id. ECT was an autonomous trading unit and had the highest RO of any of Enron’s subsidiaries. Id. It was responsible for 40 percent of Enron’s earnings. Id.

38. Id. “They [Enron] didn’t hide it, but there was not a lot of financial disclosure about the hedge-fund group.” Id. Of course, no one referred to Enron as such until after the collapse despite the obvious revelations that basic financial report analysis would have provided. A safety tip on companies is that when they have income through the roof but nonexistent cash flow and returns lower than their cost of capital, something might be amiss. The Enron team quickly mocked those who asked such basic finance and financial reporting questions. Fortune magazine’s editors had to accept a tongue lashing from Jeffrey Skilling because one of its reporters, Bethany McLean, had the nerve to raise the basic question, “How are these guys doing this?” Actually, she asked an even better question, “What exactly are these guys doing?” Ms. McLean indicates that she obtained her insights and questions from a short-seller, one of those risky market types (although no more risky than an Enron investor, as we know now) who bets that a company’s stock will go down. It seems short-sellers really do their homework. See Why Enron Went Bust, supra note 15; see also Cassell Bryan-Low & Suzanne McGee, What Enron’s Financial Reports Did and Didn’t Reveal: Enron Short Seller Detected Red Flags in Regulatory Filings, WALL ST. J., Nov. 5, 2001, at C1.
Two critical FASB rules enabled Enron to make the transition from energy company to hedge fund with minimal disclosures. The first rule dealt with disclosures on special purposed entities ("SPEs"). Direct disclosures about these entities were not required on Enron's financial reports if these SPEs were structured a certain way. To even understand the scope and breadth of these off-the-books entities required great expertise and significant outside research. Without this significant outside research, it was impossible to understand or evaluate Enron's true financial situation.

Enron also used the flexibility FASB provided on the booking of revenues for contracts that will be performed in the future, known as mark-to-market accounting. Under FASB rules, management was charged with the duty and discretion of valuing those contracts and Enron management used that discretion liberally.

Enron rode the wave of double-digit earnings and a booming economy by taking advantage of the flexibility of the FASB rules and the even greater flexibility of auditors charged with their application to their clients' financial

39. ACCOUNTING FOR TRANSFERS AND SERVICING OF FINANCIAL ASSETS AND EXTINGUISHMENTS OF LIABILITIES, Statement of Financial Accounting Standards No. 140 (Financial Accounting Standards Bd. 2000) [hereinafter ACCOUNTING FOR TRANSFERS], a replacement of FASB 125, governs the consolidation of financial statements with regard to SPEs. The rule provides that until the company owns fifty percent or more of the voting shares, consolidation reporting with the parent is not required. Enron's Accounting Issues—What Can We Learn To Prevent Future Enrons Statement Before the House Energy & Commerce Comm., 107th Cong. (Feb. 6, 2002) (prepared statement of Bala G. Dharan, Ph.D., C.P.A., Professor of Accounting at Rice University) [hereinafter Dharan testimony]. See infra section II.B for further explanation of Enron's use of SPEs to manipulate the FASB rules.

40. Note, once again, the use of the water metaphor. For example, one of Enron's 10-Ks (1999) simply disclosed that officers of the company were the principals in organizations that were doing business with Enron. The mandatory "related party transactions" disclosures revealed the following, a senior officer of Enron "is the 'managing member' of [LJM] with which Enron had entered into series of transactions." What Enron's Financial Reports Did and Didn't Reveal: Enron Short Seller Detected Red Flags in Regulatory Filings. supra note 38. This one-line disclosure was a signal to some analysts, i.e., "Dad gum, these guys are doing business with themselves and taking commissions from each other to do it." However, few analysts actually took the time to investigate Enron's true structure and debt exposure. Actually, given the revelations on analysts post-Enron and Merrill Lynch's plea agreement, it would seem analysts were doing very little except touting the shares of companies in which their firms had an underwriting interest. Hear no evil, see no evil, speak no evil, and don't say anything about the financials or 881 Enron subsidiaries, 700 of which are in the Cayman Islands. Professor Alan Bromberg notes, "[t]he heart of disclosure is intelligibility... If the people to whom it's addressed can't understand it, it hasn't been adequately disclosed. There's clearly a qualitative, as well as a factual, component to disclosure." Jonathan Weil, What Enron's Financial Reports Did and Didn't Reveal: Auditor Could Face Scrutiny on Clarity of Financial Reports, WALL ST. J., Nov. 5, 2001, at C1. Those who did question Enron were met with the wrath of Khan, or at least Skilling. A short seller who criticized Enron for not providing a balance sheet was called an "ah" by Jeffrey Skilling in April 2001. What Enron's Financial Reports Did and Didn't Reveal: Enron Short Seller Detected Red Flags in Regulatory Filings, supra note 38.
The confluence of the effects of these two accounting rules permitted Enron's managers to paint a picture of Enron's financial condition that neither reflected the exposure investors held in terms of risk nor the true amount of earnings the company had.

1. "Mark-to-Market Accounting"

Enron utilized "mark-to-market accounting," in full compliance with accounting rules for the reporting of income from futures contracts. These rules apply not just to energy contracts, but to all types of transactions that are entered into presently, but will realize revenue over long periods of time. The right to receive those revenues or the present value of those contracts is a critical part of a company's, especially one such as Enron, financial picture. Under FASB 133, for example, energy traders are permitted to include in current earnings those profits they expect to earn on energy contracts and related derivative estimates. Accordingly, many energy companies were posting non-cash earnings that they expected to realize some time in the future.

Mark-to-market accounting was an integral part of the electric industry, but was used by all companies that had any form of long-term contracts, future and otherwise. By the time of its collapse, Enron had eighty percent of its earnings from "wholesale energy operations and services" or contracts for sales of power it was not generating but purchasing from others, then hedging, then leveraging and then hedging again, all based on its valuation of its contracts using mark-to-market accounting. For some analysts, understand-
ing mark-to-market accounting was the key to picking Enron apart, even in its hay-day. The additional complexity in mark-to-market contracts and revenues is that those who depend on earnings levels of the company for compensation are assigned the task of valuating the contracts. Mark-to-market accounting requires that company managers develop the formulas used for the valuation of future contracts. The numbers are subjective, both as a function of human error and as a result of the vacillating nature of the value of the contracts because of their direct ties to the fluctuating prices of energy. Contract values carried in earnings depended upon assumptions management made about market factors and the resulting impact on the value of the contracts. Such assumptions, used in computing future earnings booked presently, are not revealed in the financial reports and investors have no way of knowing the validity of those assumptions or even whether they are conservative or aggressive assumptions about energy market expectations.

46. Here is an analysis of Enron stock that might have tipped an open-minded soul, even at $80/share:

- The company stock was selling at 60 times earnings, but
- Its cash flow was negative despite ever-increasing revenues
- It had a very low return on equity (7% even in 2000) (off-the-balance sheet debt not counted)
- It was burning through cash as if there were no tomorrow (who doesn’t with a concierge at company headquarters?)
- Its operating margins were 5% in 2000 and 2% in early 2001.

47. See Mark to Market Gets Scrutiny, supra note 44. ABN Amro Analyst Paul Patterson, a specialist in energy trading firms, offered the following insight, "[w]henever there’s a considerable amount of discretion that companies have in reporting their earnings, one gets concerned that some companies may overstate those earnings in certain situations where they feel pressure to make earnings goals.” Id. For example, many of Enron’s futures contracts were for contracts in states that had not yet deregulated electricity. Those contracts could not be performed until deregulation occurred, but Enron indicated that it had factored in the risk regarding deregulation in the valuation of those contracts. Floyd Norris & Kurt Eichenwald, Enron’s Many Strands: The Accounting; Fuzzy Rules of Accounting and Enron, N.Y. TIMES, Jan. 30, 2002, at C1.

48. Further, the void in regulation permits very little disclosure about the assumptions, Mark to Market Gets Scrutiny, supra note 44.

49. The assumptions that can be all over the maps, weather and otherwise, are the prices of the commodities such as oil, gas and electricity, and, get this, the weather. Whether it will be hot or cold, long winter or short, hot summer or not, controlled the value of these energy contracts. In fact, the volatility of the pricing and value of these contracts was so great that Enron often hedged its contracts with what amounted to bets on the weather, Enron Unplugged, supra note 14. In lay terms (no CEO pun intended), Enron’s contracts bet one way on the weather and then it went into the derivatives and hedge markets to bet the other way.
A simple example illustrates the diversity of opinion. Suppose that an energy company has a contract to sell gas for $1.00 per gallon, with the contract to begin in 2004 and run through 2014. If the price of gas in 2002 is $0.80 per gallon, then the value of that contract can be booked accordingly and handsomely, with a showing of a 20 percent profit margin. However, suppose that the price of gasoline then climbs to $1.20 per gallon during 2003. What is the manager’s resolution and reconciliation in the financial statement of this change in price? The company has a ten-year commitment to sell gas at a price that will produce losses. Likewise, suppose that the price of gas declines further to $0.50 per gallon in 2003. How is this change reflected in the financial statements, or does the company leave the value as it was originally booked in 2002?

Investors have difficulty cross-comparing financial statements of energy companies because they are comparing apples and oranges because of market changes and adjustments or non-adjustments to financial statements, are mostly not disclosed. It is nearly impossible to view earnings as something definitive when firms have a substantial percentage of earnings from mark-to-market accounting.

For example, the unrealized gains portion of Enron’s pretax profit for 2000 was about 50 percent of the total $1.41 billion profit originally reported. That amount was one-third in 1999. Dynegy, another Houston energy company was poised to buy Enron until it realized the extent of the financial issues, also had about one-half of its $762 million in pretax profits in just in case it was wrong on its assumptions in the weather, the contracts and the pricing. Then Enron management had to assess a value for the weather bets. So, the validity of income statements, as you can see, is all tied to barometric pressure under FASB rules.

The wisdom of these ten-year agreements for commodities such as gas and electricity is a stand-alone question. Further, the courts are not particularly generous in forgiving errors made in entering into the long-term contracts. For example, in a line of cases concerning long-term contracts entered into by Westinghouse Electric Corporation, the courts were reluctant to relieve the company of its liability simply based on changes in expectations. Westinghouse committed to deliver uranium to twenty-two utilities under twenty year supply contracts at prices ranging from $3 to $10 per pound. The contracts were entered into in the late 1960s and early 1970s. When the nation’s energy picture changed substantially in 1974 with the Arab oil embargo, prices for uranium went to $45 to $75 per pound, with availability being a substantial question. Westinghouse sought to be excused from performance under the agreements under U.C.C. § 2-615, commercial impracticability. While many of the suits brought by the utilities for performance under the contracts were settled, the eventual decision of the federal judge in the case was that while the fundamental assumptions of the parties had changed and there was some grounds for releasing Westinghouse from the agreements, Westinghouse had also oversubscribed in its contract commitments and was, therefore, at least partially liable. See, e.g., Tenn. Valley Auth. v. Westinghouse Elec. Corp., 429 F. Supp. 940 (E.D. Va. 1977); Tenn. Valley Auth. v. Westinghouse, 69 F.R.D. 5, 6 (E.D. Tenn. 1975); In re Westinghouse Electric Corp. Uranium Contracts Litig., 405 F. Supp. 316, 317 (1975).

For example, while an outsider could examine quoted market prices, there is no way to determine timing, inclusion and other discretionary factors in a company’s booking of revenues on futures contracts.

50. The wisdom of these ten-year agreements for commodities such as gas and electricity is a stand-alone question.

51. For example, while an outsider could examine quoted market prices, there is no way to determine timing, inclusion and other discretionary factors in a company’s booking of revenues on futures contracts.

52. Mark to Market Gets Scrutiny, supra note 44.

53. Id.
unrealized gain. The two companies settled litigation following Dynegy's withdrawal of its offer to purchase a percentage of Enron's mark-to-market earnings.

2. Related Party Transactions and Disclosures

The General Accepted Accounting Principles ("GAAP") and FASB standards for disclosure of a company's transactions with related entities (FASB 125), or those entities in which the company holds an interest, apply...
only when the company owns at least 50 percent of the related entity.\(^5\) If a company owns 49 percent or less of an entity, any debt obligations the related entity carries need not be listed as debt on the company's balance sheet.\(^7\)

While Enron's efforts at transferring debt off the books began with the creation of Whitewing in 1997, its complex network of subsidiaries and special purpose entities (SPEs) did not begin in earnest until the end of 1999.\(^5\) By the time of its collapse, Enron had created 881 to more than 3,000 SPEs,\(^5\) with many of them located in the Cayman Islands with their offshore status designed to eliminate the need for the payment of U.S. federal income tax by the entities and other business ventures.\(^6\)

Whitewing started Enron down the broad road to destruction with what was originally conceived as a fairly narrow pathway and proposed to the Board. Whitewing and its related entities known as Nighthawk and Osprey, was run by Enron employees, did business only with Enron, and was owned fifty percent by Enron and fifty percent by Nighthawk with the remainder of Nighthawk owned by outside investors.\(^6\) Enron guaranteed Whitewing's credit lines for the fifty percent that Enron owned\(^6\) and then, Whitewing purchased, in 11 transactions, nearly $2 billion in Enron assets,\(^6\) leaving Enron with a passel of cash, investors enormously happy with an eight percent immediate return, and everyone none the wiser for owning stock in a company that was pledged to banks for an SPE's debt even as the SPE owned nearly half of Enron's assets.\(^6\)

---

57. Dharan testimony, supra note 39.

59. The Enron Scandal: By the Numbers, supra note 33. The discrepancy in the numbers is due to the complexity in counting the multifarious entities. Many had the same name, but a Roman numeral following them, while others used an Arabic sequential numbering system while others were part of a single umbrella entity. It is impossible to know the exact number although the exhibits to Enron's 10-Ks for 1999 and 2000 do list about 3,000 SPEs. ENRON 10-Ks (1999, 2000) available at http://www.sec.gov/Archives/edgar. See infra note 215 and accompanying text for more information on this disclosure. Not until the government unfolds its criminal case or the shareholders get rolling on their suits can we really know how many, where and what. The why may never be discoverable. Indeed, if there is one consistent theme in the entire Enron debacle it is that no number is ever certain.

60. There were "about 900" partnerships based offshore. The Enron Scandal: By the Numbers, supra note 33.

61. PSI REPORT supra note 58, at 39.

62. Id.

63. Id. at 40.

64. For those of you who have reached the conclusion that everyone was investing in air, you are correct—air with razor-thin margins. Interestingly, Whitewing has not made its way into the business press. Business coverage and analysis generally begins with the 1999 transactions in SPEs, but Whitewing established a precedent and provided management with a pat-
Whitewing, however, was only the beginning of the SPEs and their maximum utilization by Enron for moving its debt off the books. The massive numbers of transactions are the subject of Congressional, criminal, and shareholder litigation. A shareholder class action lawsuit filed in November 2001, includes the following descriptions of Enron's practices:

One of Andrew Fastow's "innovative" accounting techniques was to create entities (trusts) to which Enron would issue millions of dollars in mandatory convertible debentures or depreciated assets. The trust would then use the assets as collateral to receive billions of dollars in financing for Enron projects, including Broadband. Although Enron Corp. officially owned less than fifty percent of these entities, Enron controlled them. Defendants, improperly, did not consolidate these entities into Enron's disclosed financials; rather, Defendants hid the true nature of all of these transactions from the public. This meant Enron was engaged in business deals, risky hedging, self-dealing transactions that were never disclosed to the SEC.65

While it would be impossible to review all of the "off-the-books" transactions, there are several illustrative examples of the complexity, debt exposure, and involvement of Enron management in these SPEs. One series of complex, but fruitful transactions that publicly emerged were the so-called "Raptor" transactions.66 The Raptor transactions were an ongoing series of transactions that involved the LJM transactions.67 But, the LJM transactions were the impetus for the Raptor transactions and necessary to avoid problem...
lems with FASB rules. The names, as well as the complexity of these layers of transaction, provide insight into the nature of Enron’s business, its culture, and the hubris that engulfed its senior management. Further, no one seemed aware of the risks these complexities created until after Enron’s downward spiral began with the revelation of earnings reversals and debt that had heretofore been off the books. That examination is akin to peeling a genetically mutated onion in which the layers themselves have their own layers as well as spots and each layer cannot be peeled back until one reaches the inner layers, but the inner layers cannot be reached without first penetrating the outer layers.

The Raptors were really four off-the-books finance vehicles created as the holding companies for Enron’s high-risk assets, including technology stocks and some of its foreign investments. In short, the Raptors were hedging vehicles. The Senate Report on Enron’s Board concludes:

These documents establish that, step by step, the Enron Board allowed the establishment of Whitewing, supported it with Enron stock, restructured it as an off-the-books entity, approved its use as an off-balance sheet vehicle to purchase Enron assets, monitored billions of dollars in Enron asset sales

68. The Enron Board minutes also document an LJM transaction in which LJM participated in an “Osprey Add-On” which was apparently a means for Osprey to provide additional capitalization for Whitewing, of which Osprey was a subsidiary. PSI REPORT supra note 58, at 40-41 (internal citations omitted). How did these guys sleep at night with birds and raptors dancing through their heads at levels I, II, III and IV and 1 and 2, but not 3. Trying to keep track of all the incestuous financial relationships among the SPEs reminds the author of trying to survive those fire worlds in the original Mario Brothers. Things were flying at you everywhere even as the floor fell out from beneath you and the elevators kept moving.

69. John R. Emshwiller & Rebecca Smith, Scandals Shake Public Trust, WALL ST. J., Dec. 5, 2001, at A1. “It was vintage Enron: minimal disclosure of financial information that, in retrospect, was central to understanding the complex company.” Id. “Many Wall Street analysts admitted to not fully understanding chunks of Enron, a company that had 3,500 subsidiaries and affiliates across the globe.” Id. See infra note 232 for other figures on numbers of subsidiaries. “But to analysts and investors seeking to understand it, Enron was uninformed.” Emshwiller & Smith, supra. The press release for the $618 million loss and the reduction of shareholder equity occurred on October 16, 2001. Why Enron Went Bust, supra note 15, at 66.

71. The Raptors were numbered in sequence and inspired by the film JURASSIC PARK (Universal Studios 1993), in which the raptors ended up eating everyone and everything and controlling the Jurassic Park Island. David M. Boje, Enron is Metatheatre, at http://cbae.nmsu.edu/~dboje/enron/dialogs.htm (last visited Mar. 7, 2003). Enron was not unlike Richard Hatch in the first Survivor television series on CBS. Mr. Hatch’s diabolical conduct with his colleagues found him with all the money. Enron did the same, but without the nudity. Kathryn Kranhold et al., Following the Trail: As Enron Inquiry Intensifies, Midlevel Players Face Spotlight, WALL ST. J., Apr. 30, 2002, at A1 [hereinafter As Inquiry Intensifies, Midlevel Players Face Spotlight].
to Whitewing, and monitored Whitewing’s impact on Enron’s financial statements and its claims on Enron stock. 72

To satisfy FASB 125, the Raptors were required to have at least three percent equity ownership by outsiders. 73 The basic theme of the Raptors and all other Enron partnerships was as follows:

- Enron creates a partnership (an SPE)
- Enron recruits an outside owner to cover the 3% rule 74
- The SPE purchases Enron assets (the riskier ones such as broadband width, shares in subsidiaries in high tech fields) but the sale is simply for an IOU from the SPE 75
- Enron can show a profit on its books for the sale
- The debt (IOU) of the SPE is not carried on Enron’s books
- If the value of the sold asset falls, the SPE can’t pay the IOU
- Enron would issue its stock to the SPE
- The SPE sells the shares of stock to raise cash
- The entire scenario is dependent upon Enron’s share price remaining high 76
- If the share price falls, as it did beginning in the summer of 2001, then all of the SPEs have no assets and no value
- Although Enron told analysts it was non-recourse, Enron was the guarantor for SPE’s IOUs—it was the only way to recruit the outside investor 77
- Andrew Fastow, Enron’s CFO, was the principal in many of the partnerships and would net more than his Enron salary in serv-

72. PSI REPORT supra note 58, at 41.
73. Dharan testimony, supra note 39, at 6. As time went by, the definition of “outsiders” became flexible as the labyrinth web of Enron finances grew. For example, Andrew Fastow, Enron’s CFO, proposed using his wife’s family as the outside investors. When Andersen nixed the idea, he used Michael Kopper, a mid-level employee, who could avoid SEC disclosure because he was not an officer. Joshua Micah Marshall, Talking Points Memo, at http://www.talkingpointsmemo.com/feb0201.html, (Feb. 6, 2002.)
75. Acronyms and movie names abounded among the Enron off-the-books empire. See infra notes 79-104 and accompanying discussion.
76. For diagrams of more details on this process, see Peeling Back the Layers, supra note 70. Several Board members have noted that they felt, during the countless presentations and approval processes for these transactions that there would be no impact on the company and that what they were doing were simply “accounting gimmicks.” PSI REPORT supra note 58, at 46. However, the Board meeting documents also show that the directors were told that the key to all of the transactions was maintenance of Enron’s share price, which as we now know was determined by the tides and/or barometric pressure. See supra note 49 and accompanying text.
77. They were making this up—they were not non-recourse notes. In fact, no one has given non-recourse notes since 1929. See infra note 113.
A PRIMER ON ENRON

Walking through examples of these partnerships illustrates how complex Enron's finances were, perhaps too complex to grasp. The Raptor transactions began with the Raptors created by Enron providing stock in exchange for a promissory note (or some form of IOU as noted in the general model). LJM2, with outside funding, invested $30 million in Raptor in exchange for a promised rate of return of thirty percent. But, Raptor had to recover LJM2's $30 million investment, so Enron paid Raptor $41 million for the right to sell Raptor Enron stock at a fixed price at some time in the future. Raptor took the $41 million and repaid LJM2 its $30 million plus $11 million, thus meeting the thirty percent ROI and providing Fastow with his earnings. Once LJM2 was repaid for its investment, Enron used Raptor

78. Rebecca Smith & John R. Emshwiller, Enron CFO's Partnership Had Millions in Profit, WALL ST. J., Oct. 19, 2001, at C1. Mr. Fastow realized $7 million in management fees and $4 million in investment yields from the LJM2Co-Investment LP, created in 1999 to do business with Enron, in the year 2000. Id. There was also an interesting transaction in which Mr. Fastow and five other Enron employees formed Southampton, L.P., and purchased a subsidiary of LJM1. For those of you still keeping score, (indeed, for any of you still following along,) Mr. Fastow was buying partnerships he owned that owned assets of the company for which he was the CFO and for which he received management fees for both the buying and the selling inasmuch as he was batting for both sides. Bring in his Enron role and he had a triple play each time a deal to transfer assets occurred. Not bad work if you can get it. The downside is pleading the Fifth Amendment at Congressional hearings.

79. In a “Top 10” list written by Enron employees entitled “Top Ten Reasons Enron Restructures so Frequently,” #7 on the list was “[b]ecause the basic business model is to keep the outside investment analysts so confused that they will not be able to figure out that we don’t know what we’re doing.” #1 was “[f]orget all the hype about being Fortune’s #1— congratulations to Enron for having broken a Guinness [B]ook of [W]orld [R]ecord with 942 reorganizations in one year!” Peeling Back the Layers, supra note 70.

80. Frank Partnoy, Testimony of Frank Partnoy at the Senate Enron Hearings, FUTURES & DERIVATIVES L. REP. 1, 4 (Feb. 2002).

81. The Bookkeeping: Too Clever By Half, supra note 66. The author does not want to mislead, the transaction could have involved LJM1. Frankly speaking, the SPEs are more confusing than the financials. But we know that the LJMs did interbreed with Raptors and the interbreeding netted Fastow and others in the company tidy sums because they were the principals of the Raptors and LJMs, but as far as we know, not of the Whitewings and Ospreys and the add-on rooms to the Ospreys. We are also unclear at to how much Fastow actually made on the transactions because he was most resistant, even to Board members, about disclosing his compensation from LJM, Raptors and even the little-known Southampton. One Board member, assigned the task to go and face the dragon CFO, wrote in his notes that Fastow acknowledged receiving $45 million from the various SPEs and the transactions he negotiated both for Enron and the SPEs. PSI REPORT supra note 58, at 36. For more discussion of these fees and Fastow’s reticence, see infra section III.D.3.

82. The Bookkeeping: Too Clever By Half, supra note 66. For those of you with finance background, we have the use of warrants, options, puts and calls going on here. Most of you have probably realized that Enron had issued stock to Raptor to start and was now issuing the right to buy stock as Raptor’s second asset. So, even non-finance types are able to see that the price of Enron’s stock was important to the success of Raptors, Enron, Fastow, shareholders and just about everyone in the Greater Houston area.

83. Id. Andrew Fastow is an interesting character study, although “character” is not used in the integrity sense. He graduated from Tufts University and then received his MBA from
for contracts with itself that provided Enron with hedges for any potential losses on investments (including the volatile high tech areas). The benefit to Raptor was that it would enjoy the gains if the assets increased in value. The downside was that Raptor had to cover any losses in values, but it could do so with Enron stock so long as the share price remained stable or increased.

It seems that most Board members understood the Raptor transactions’ overall effect. Notes from Enron’s corporate secretary at an Enron Board committee meeting reads “[d]oes not transfer economic risk, but transfers P&L volatility.”

While “The Raptors” collectively referred to the many SPEs created for risk transfer, there are several examples that illustrate the extent of other SPEs and the different types of transactions. For example, in 1999, Enron announced that it had transferred, by private agreement, 1,999,999 shares from its affiliate, Sundance Assets, to another affiliate, SE Thunderbird.

Northwestern. He started at Enron in 1990, fresh from his work as a “troubled loan” specialist at Continental Bank. Oh, the Shakespearean foreshadowings! He began using off-the-books partnerships immediately upon his arrival. By age 36, he was CFO of Enron and in 1999 was honored by CFO Magazine for his innovative financing structures. Finest in Finance, CFO, Oct. 1, 1999, at 45. Memo to CFO Magazine: we really need to talk. He told the interviewer for that story that he kept Enron’s credit rating high by keeping debts off the balance sheet. Memo to Wall Street and analysts: the man confessed three years ago and you missed it. At the time of Enron’s collapse, Mr. Fastow was in the process of building an 11,500 square-foot house. David Barboza & John Schwartz, Enron’s Many Strands: The Financial Wizard Tied to Enron’s Fall, N.Y. TIMES, Feb. 6, 2002, at A1. Again, see supra notes 65-126 for information on the extent of restructuring and off-the-books debt; and infra note 238-245 on the takedown Mr. Fastow when it came to Board requests for interviews.

85. The Bookkeeping: Too Clever By Half, supra note 66.
86. Id. In fact, in a chilling touch of arrogance, the Raptor transactions were referred to collectively as Hawaii 125-0, a play on Jack Lord’s old show as well as a fist of defiance to accounting standards and FASB 125 on its three percent ownership requirement coupled with the fifty percent rule. Rebecca Smith, Short Circuit: How Enron’s Plan to Market Electricity Nationwide Fizzled, WALL ST. J., Mar. 25, 2002, at A1. Interestingly, that corporate secretary, Rebecca Carter, received a proposal of marriage from Mr. Skilling in July 2001, just after Mr. Skilling informed Mr. Lay that he was leaving the company. Ms. Carter and Mr. Skilling were married shortly thereafter. To no one’s surprise, this allowed the marital privilege to prevent testimony from the former corporate secretary about which officers knew what and said what and explained what at Board meetings. David Barboza, Enron’s Many Strands: The Former Chief; Friends Say Ex-Chief Despairs, Seeking Someone to Believe Him, N.Y. TIMES, Aug. 22, 2002, at C1.

Enron did not, however, disclose that Sundance Assets was partially owned and controlled by Enron's unconsolidated subsidiary, New Power. Enron owned forty-five percent of New Power and New Power had been created to sell electricity and natural gas to residential and small load customers throughout deregulated markets in the United States. None of these ownership interests or Enron's contracts with these companies was disclosed in Enron's financial statements.

Enron also did a substantial amount of business with LJM Cayman, L.P., a private investment company that specializes in energy futures contracts and which was also managed by Andrew Fastow, a principal in New Power. These complex interrelationships and the lack of a required disclosure enabled Enron to transfer assets into LJM, thereby increasing Enron's equity position and its market worth. For example, in June 2000, Enron transferred, through Mr. Fastow, sufficient shares to LJM2 to permit Enron to report an increase in its equity of $171 million while also reporting the assets that LJM transferred in exchange for the shares represented $500 million in proceeds. Also during that quarter in 2000, Mr. Fastow facilitated the sale of Enron's "dark fiber cable" to LJM2 for $30 million in cash, a $70 million note, and a gross margin of $53 million reported earnings for the quarter. These earnings were subsequently reduced in October 2001 in the now infamous press release that was the beginning of Enron's end. However, the LJM2 partnership reported that the company earned $7 million in management fees and "about $4 million in capital increases" in 2000.
Often, Enron was using other SPEs to hedge and raise cash for partners who wanted to recoup their investments and withdraw. For example, the California Public Employees' Retirement System's (Calpers) formed a joint venture with Enron called, Joint Energy Development Investments, LP (JEDI). Calpers and Enron formed the joint venture to make energy-related investments. Both the partners are believed to have put in $250 million each into JEDI.

In 1997 when Calpers wanted out of JEDI, Enron could not simply buy back Calpers' share because it would have been required to reflect a debt load of $1.6 billion on its balance sheets because of its resulting 100 percent ownership of JEDI that would have occurred and triggered the application of the FASB consolidation rule. Further, it was critical to Enron's survival that any outside company involved in a joint venture not become dissatisfied with its involvement or investment because Enron would be unable to recruit new outside partners to assume the stake necessary to keep the transactions of the SPEs off the Enron books.

To avoid such a disclosure in the Calpers situation, Kopper and Fastow formed Chewco (believed to be named after Chewbacca of "Star Wars" fame) to purchase Calpers' share. In March 2001, a senior officer who reported to Mr. Fastow, Michael Kopper, facilitated a $35 million deal between Enron and Chewco Investments, LP. Mr. Kopper was also listed as a principal in LJM2 and described "manag[ing] the general partner of Chewco, an investment fund with approximately $400 million in capital commitments that was established in 1997 to purchase from Enron an interest in a defined pool of Enron assets." No one has been able to determine how Enron paid the $35 million to Chewco and exactly how much Chewco or Mr. Kopper benefited from the transaction in which Calpers sold its share to Chewco for $375 million. The government has at least submitted a chart establishing its theories on amounts and furthermore, Mr. Kopper’s

---

97. Enron Slashes Profits, supra note 35. These and other transactions were part of a series of Star Wars-named covert partnership operations. Those in Fastow's area were proud of their ability to keep the balance sheet healthy and the earnings rising. Whenever a successful new SPE was launched or a transaction closed, those responsible would receive "plaques with chrome replicas of Star Wars light sabers." Peeling Back the Layers, supra note 70. Others received plaques with R2D2 replicas. Id.

99. Id. Mr. Kopper reported to Mr. Fastow. It is believed he was chosen because no SEC disclosures would be required regarding his role or compensation, because he was not a "16-b" officer. See PSI REPORT supra note 58, at 34. This is the level at which stock transactions and other reporting requirements arise under the Securities Exchange Act of 1934. 15 U.S.C.A. § 78p (2001); PSI REPORT supra note 58, at 12 n.16.

100. Enron Transaction Raises New Questions, supra note 98.

103. Id.
guilty plea adds a truckload of evidence to the case against Enron and certainly Fastow.\textsuperscript{104}

The relationships were actually far more complex with resulting liability exposure for Enron. Enron was advancing the funds for the outside party to invest in the SPEs or the money being used to finance transactions with the SPEs were borrowed from syndicates of lenders who accepted Enron stock as security for the loan.\textsuperscript{103} Additionally, Enron often served as the guarantor for loans to the SPEs and there was no disclosure in Enron’s financial statements about its potential exposure as a guarantor, one of the factors that did cause some discussion between company executives and Andersen auditors.\textsuperscript{106} All of these transactions depended on Enron being able to maintain its share price, a price that was tied directly to the volatility of prices in the energy market.\textsuperscript{107}

These relationships also revealed a loophole in the FASB rules on SPEs that permitted nearly one hundred percent exposure by the company in an SPE without the need for disclosure. For example, in the Calpers relationship, Enron and Calpers formed a joint entity, an LLP, known as New Power.\textsuperscript{108} Calpers would front three percent of the capital necessary for the creation of New Power in order to give it operating funds.\textsuperscript{109} The reason

\textsuperscript{104} Editor’s Ruling: Andersen Win Lifts U.S. Enron Case, supra note 9; see also Kurt Eichenwald, Enron’s Many Strands: The Overview; Ex-Enron Official Admits Payments to Finance Chief, N.Y. Times, Aug. 22, 2002, at A1. No one has been able to determine what the heck was going on here generally, let alone how Chewbacca got $35 million from an underlying finance guy. However, and this is not humor, the Enron executives who closed the Chewco deal did get a life-size Chewbacca head to commemorate their success. Following the Trail: As Enron Inquiry Intensifies, Midlevel Players Face Spotlight, supra note 71.

The author increasingly gets the feeling that Enron was \textit{Animal House} (Universal Studios 1978) with hedge funds and \textit{Star Wars} toys instead of beer and togas. However, Mr. Kopper’s guilty plea is one that guarantees that he sings like a canary in exchange for leniency in his sentencing. And Mr. Kopper is in a position to hold a great deal of information. What we did know is that he was chosen for this particular deal because he was not at a level in the company that required that his role with the SPE be disclosed in the SEC reporting documents. Kopper has already indicated that some of the money in these transactions went to Mr. Fastow. Eichenwald, supra. And, implicitly from the plea terms, some of the money must have come to him because he agreed to pay back $12 million. See \textit{id}. Kopper says he and a Mr. Dodson split $7 million from the Chewco arrangement and that Mr. Fastow’s family got at least $121,000. \textit{Id}. He also maintains that he and Fastow each got $4.5 million from the Southampton deal, with some of Fastow’s distribution going to his wife and children, as theorized. \textit{Id}.

\textsuperscript{105} See As Inquiry Intensifies, Midlevel Players Face Spotlight, supra note 71.

\textsuperscript{106} See John R. Emshwiller & Rebecca Smith, Joint Venture: A 1997 Enron Meeting Belies Officers’ Claims They Were in the Dark, WALL ST. J., Feb. 1, 2002, at A1. There were numerous discussions about whether there was “sufficient equity at risk” in the Raptors to permit the continuing of carrying the SPEs off the books. As Inquiry Intensifies, Midlevel Players Face Spotlight, supra note 71.

\textsuperscript{107} See Enron Meeting Belies Officers’ Claims They Were in the Dark, supra note 106.

\textsuperscript{108} See Diana B. Henriques, Enron’s Many Strands: A Big Investor; Even a Watchdog is not Always Fully Awake, N. Y. Times, Feb. 5, 2002, at C1.

Calpers, and others in similar joint ventures with Enron, would front only 3 percent is because under FASB Rule 125, it was the minimum requirement for protection of the non-consolidation rule. In other words, an outside party, other than lenders and particularly those who investment was guaranteed by the company had to own at least three percent of the SPE that their joint venture created. However, in some cases, Enron advanced the funds to the outsider for the three percent investment.

A consortium of lenders who were given a guarantee on the loan by Enron was the remaining ninety-seven percent of the investment in New Power. The guarantee was only of value to the extent that Enron was able to maintain the market price of its shares. Enron then used the minimal investment of three percent from the outsider to claim an ownership interest in the SPE which it then could consolidate on its own financial statements.

However, by June 2001, the lawsuit says, at least some bank executives knew of Enron’s tenuous financial situation. The lawsuit claims that CSFB managing directors were meeting with Enron executives to discuss the structure of one of Enron’s partnerships.

One CSFB manager “commented to an Enron manager, ‘how can you guys keep doing this?’ referring to Enron’s repeated statements to the market that its stock was undervalued,” the lawsuit states.

The CSFB manager told the Enron executives that the stock was “overvalued” at $40; it was trading at $48.50 at the time. According to the lawsuit, the CSFB manager warned the Enron executive that if the stock fell to $20 a share, “things are going to come falling down and you guys are gonna be fed.”

Despite those comments in June by one CSFB manager, a CSFB analyst came out with a “strong buy” rating on Enron’s stock on Aug. 14 with a price target of $84 a share. There is no evidence in the lawsuit that CSFB’s bankers and research analysts ever colluded or had conversations about Enron’s finances, but Mr. Lerach claims that the CSFB manager had the obligation to tell the analyst about Enron’s potential problems.

“The 13th floor had the responsibility to tell the 10th floor that it’s a fraud,” Mr. Lerach said.

In addition, there are some questions about how the banks such as J.P. Morgan Chase, Citigroup and Credit Suisse First Boston provided their loans to Enron. For example, J.P. Morgan Chase made its loans to Enron through a shell company called Mahonia, a subject of litigation. See Jonathan Sapsford & Anita Raghavan, Trading Charges: Lawsuit Spotlights J.P. Morgan’s Ties to the Enron Debacle, WALL ST. J., Jan. 25, 2002, at A1. And Citigroup lent
vestment SPEs to transfer Enron assets in exchange for cash; something that Enron needed more and more as its share of the energy market dwindled. In the case of Calpers, Enron created New Power, a spin off of Enron and a vehicle for raising capital.\textsuperscript{115} New Power would hold the power plant and the problems associated with the plant while Enron would be paid the funds to aid in the financial problems Enron was facing.\textsuperscript{116}

Knowing that it had the exposure of the loan guarantee in New Power and other similar transactions with third parties, Mr. Fastow then developed a process, repeated many times throughout the web, whereby it would take warrants from New Power and sell them to yet another SPE in exchange for cash. Not only was this secondary layer of SPEs used as means of hedging, it was also yet another source of cash flow.\textsuperscript{117} For example, in the case of New Power, Enron created Raptor III, part of the umbrella of Hawaii 125-0, that was utilized in order to create, without disclosure on Enron's financial statements, this complex extra-structure that provided the cash flow and financial façade necessary for Enron to continue.\textsuperscript{118}

Raptor III would be financed, again, a consortium of lenders.\textsuperscript{119} Raptor III had a consortium of sixteen banks providing its financing, including a group of Canadian banks.\textsuperscript{120} While Enron guaranteed the Raptor III LLP, it

\begin{flushright}
$2.4$ billion via prepaid swaps. Daniel Altman, \textit{Enron's Many Strands: Finances; Enron Had More Than One Way To Disguise Rapid Rise in Debt}, N.Y. TIMES, Feb. 17, 2002, at A1. With a prepaid swap, two parties shift their future ROIs. \textit{Id.} One party pays a small amount for a fixed return in exchange for uncertain gains another party is willing to forgo, \textit{id.}, and we can assume has probably hedged anyway. Finally, Credit Suisse Boston's arrangement with Enron was a loan tied to the price of oil. \textit{Id.} The bank called it a loan while Enron called it an asset of risk management. \textit{Id.}
\end{flushright}

Congress has not been kind to the bankers in the Enron matter. An internal e-mail Congress uncovered in J.P. Morgan Chase documents from a bank executive, George Serice, responsible for the Enron account, read, "Enron loves these deals because they are able to hide funded debt from their equity analysts because they at the very least book it as deferred revenue or, better yet, bury it in their trading liabilities." Lydia Adetunji & Peter Spiegel, \textit{Banks "Actively Helped" Enron to Disguise Debt}, FIN. TIMES, July 22, 2002. The e-mail is dated November 1998. \textit{Id.} The bank referred to "pre-pays" in its e-mails which apparently were complex financial transactions with Enron (were there any other kind?) that purported to be commodities trades but were really loans. \textit{See id.} One e-mail from a Chase employee to George Serice, the executive who wrote the "Enron loves these deals" e-mail, read, "$5 billion in prepays!!!!!!!" Serice responded, "Shutup and delete this e-mail." Paul Beckett et al., \textit{How Energy-Trading Boom Went Bust}, WALL ST. J. EUROPE, Dec. 31, 2002 at A2.

\item \textsuperscript{120} \textit{Id.}
\end{itemize}
did not guarantee the actual loan, Enron was not required to disclose its relationship to Raptor III in its financial statement, so it was 100 percent financed by lenders. Hence, the three percent rule did not apply. Accordingly, Enron was not required to disclose its relationship with Raptor III in its financial statement.\textsuperscript{121}

Enron benefited in other ways from this layered transaction. Fastow served as the principal for Raptor III and when the bank consortium loaned it $500 million, Fastow was entitled to a commission because of his success in arranging for the funding.\textsuperscript{122} New Power pledged warrants for Enron stock to the bank consortium as security for the loan to Raptor III.\textsuperscript{123} New Power would then sell the warrants to Raptor III and Raptor III would turn over the cash to New Power, which also netted officers running that SPE a commission and New Power was awash in cash that it could use to purchase more Enron assets, which Enron would sell to maintain cash flow.\textsuperscript{124}

Realizing its exposure on this guarantee of the Raptor III LLP, Enron then purchased total return swaps as a way of hedging and affording itself protection in the event of changes in the stock price.\textsuperscript{125} The following three diagrams depict the relationships between and among Enron, Calpers, New Power and Raptor III, as well as their lenders.\textsuperscript{126}

\item[123.] Id.
\item[124.] See id.
\item[125.] Id.
\item[126.] Id. There was an additional layer to the New Power/Raptor III transactions in which Fastow created an LLP known as Porcupine, which was a hedging vehicle for New Power. Id. For example, if New Power was to go public with an IPO, Fastow would be protected against any share price drop in New Power with warrants sold to Porcupine. See id. Fastow protected Enron no matter what happened to the transactions with the SPEs. However, that protection was only as good as Enron's share price, something he was trying to buoy with the transactions he was entering into with the SPEs even as he hedged the SPEs.
\end{enumerate}
\end{footnotesize}
A Primer on Enron: Lessons From A Perfect Storm of Financial Repo
As complex as these transactions were, there were still other accounting mirages that contributed to Enron's collapse. One such venture illustrates a combination of FASB 125 with mark-to-market accounting and was known as the "Braveheart" transaction. In this scenario, Enron signed a contract with Blockbuster Video to provide videos for delivery over Enron's broadband. With only a few customers in place for the video contracts, Enron sought to find a means to obtain the cash/profits in advance of sales it expected later of this new product. The Braveheart/Blockbuster partnership followed the classic Enron formula: a little bit of cash from outsiders for the three percent rule and Enron stock. An investment bank fronted $115 million to Braveheart, thus Enron scored cash and was able to record as earnings all those funds advanced because the willingness of a lender to invest that much was a valid measure of the value of future contracts for Enron on Braveheart deals.

There were other partnerships in which more Enron employees became involved. For example, in the Southampton Place Partnership, Enron lawyer Kristina Mordaunt and corporate treasurer Ben Gilsan, invested $5,800 in the Fastow partnership and just months later they had a little over $1 million wired to each of their checking accounts.

In sum, Enron had created a Byzantine empire of financial layers that were impenetrable by investors until the company's collapse when all documents were made public. The documents dribbled out over a period of months as Enron finally came to grips with the fact that it could not pay the debts it had created via the SPEs. While Enron tried mightily to find a cash

127. Floyd Norris & Kurt Eichenwald, Enron's Many Strands: The Accounting: Fuzzy Rules of Accounting and Enron, N.Y. TIMES, Jan. 30, 2002, at Cl. The movie theme continues although no one has been able to discern why the name “Braveheart” was chosen for this transaction.

129. See The Accounting: Fuzzy Rules of Accounting and Enron, supra note 127; Show Business: A Blockbuster Deal Shows How Enron Overplayed Its Hand, supra note 128. Documents indicate only a few apartment complexes had signed up, on a test basis, for the videos via broadband. One Enron employee said when the revenues were booked, "I was just floored.... I mean, I couldn't believe it.... How can they monetize this asset when we're still putting it together? It didn't make any sense to me." Id. (quoting former Enron employee).

131. For those of you still attempting to keep score, Enron parlayed a couple of contracts with apartment complexes into $110.9 million and did so all within accounting rules. See Show Business: A Blockbuster Deal Shows How Enron Overplayed Its Hand, supra note 128. Further, the Wall Street Journal reported that the lender for Braveheart's $115 million had a guarantee from Enron. Norris The Accounting: Fuzzy Rules of Accounting and Enron, supra note 125. Paul Brown, chair of the Accounting Department at NYU adds, "[t]hey were extremely clever." Id. One more thought to contemplate: Enron paid income taxes in only one year from 1996-2000. David Cay Johnston, Enron's Collapse: The Havens; Enron Avoided Income Taxes in 4 of 5 Years, N.Y. TIMES, Jan. 17, 2002, at A1. It received a refund of $105 million in 1999 and $278 million in 2000. Id.

132. As Inquiry Intensifies, Midlevel Players Face Spotlight, supra note 71.
infusion or buyer, any potential savior in just the beginnings of due diligence bolted because of the revelations minimal due diligence unveiled.\textsuperscript{133} By November 2001, Enron had been downgraded to "junk" grade.\textsuperscript{134} Enron's CEO, Kenneth Lay, left the company shortly after the collapse. Mr. Lay waived any rights to his parachute payoff, reportedly worth $60 million,\textsuperscript{135} and also agreed to repay millions he borrowed from the company.\textsuperscript{136}

A number of Wall Street analysts complained from 1995 through 2001, that Enron's financial statements were difficult to read and that its disclosures on officer relationships were not clear.\textsuperscript{137} Another said that Enron managed to operate as a "giant hedge fund" without disclosing that risk in its SEC documents.\textsuperscript{138}

The fallout from Enron's collapse has been pervasive by December 2, 2001. Enron fired 5,100 of its 7,500 employees.\textsuperscript{139} Each employee will receive a $4,500 severance package, if the bankruptcy court approves it.\textsuperscript{140} However, the employees are more concerned about their financial futures. Many held Enron stock and were compensated with Enron stock options. The stock, which was valued at nearly $85 per share in the prior year, was trading at $0.40 per share on December 3, 2001.\textsuperscript{141} Enron employees' 401(k) plans, funded with Enron stock, lost $1.2 billion as of December 3, 2001.\textsuperscript{142} "Almost everyone is gone. . . . Upper management is not talking. No managing directors are around, and police are on every floor. It's so unreal," said one departing employee.\textsuperscript{143} Another employee, Gary Kemper, a maintenance foreman, who is part of a suit filed against Enron related to the employees' 401(k) plans, plan was once worth $225,000 and is now worth less than

\end{itemize}
$10,000, said, "[H]ow am I going to retire now? Everything I've worked for the past 25 years has been wiped out."  

Enron had a matching plan for its employees on the 401(k). However, sixty percent of their plan was invested in Enron stock. Between October 17 and November 19, 2001, when the issues surrounding Enron's accounting practices and related transactions began to surface, the company put a lock down on the plan so that employees could not sell their shares.  

In addition to the impact on Enron, its employees, and Houston, there is a worldwide ripple effect. Enron has large stakes in natural gas pipelines in the United States and around the world and interests in power plants everywhere from Latin America to Venezuela. It is also a partial owner of utilities including telecommunications networks.  

Representative Billy Tauzin of Louisiana, heads the House investigation into Enron noted through his spokesman, Ken Johnson, "[H]ow a company can sink so far, so fast, is very troubling. . . . We need to find out if the company's accounting practices masked severe underlying financial problems."  

Senator Jeff Bingham, chairman of the Senate Energy Committee said, "I believe that our committee is keenly aware of the need for enhanced oversight and market monitoring."  

Enron's bankruptcy filing included a list of creditors fifty-four pages long. While the bankruptcy filing showed $24.76 billion in assets and $13.15 billion in debt, these figures do not include those off-the-balance-sheet obligations, estimated to be about $27 billion. Among the creditors exposed in the Enron bankruptcy, because of derivative transactions on energy contracts are JP Morgan Chase and Chubb.  

Enron's energy customers, including PepsiCo, the California State University system, JC Penney, Owens-Illinois, and Starwood Hotels & Resorts, now scramble to replace energy commitments. Enron had contracts with 28,500 customers. These customers are now revisiting their contracts for loopholes on both sides and ensuring that they have contingency plans in place. California's State Universities were in negotiations for renewal of their 1998 contract with Enron, but those talks are now in a stalemate.  

Trammell Crow halted the groundbreaking ceremony for its planned con-

144. Christine Dugas, Enron Workers Sue Over Retirement Plan, USA TODAY, Nov. 27, 2001, at 3B.  
145. Id.  
150. Id.
struction of new Enron headquarters; a building that would have been thirty-four stories high and included offices, apartments and stores.151

The ripple effect even stretches into unrelated investments. Five major Japanese money market funds with heavy Enron investments fell below their face value by December 3, 2001.152 These losses will have an impact primarily on retirees because the five funds were seen as “safe haven” funds for investors. The banks that financed Enron SPEs are in litigation to recoup funds with the recovered funds also going to partners they had in their funding entities.153

Enron’s collapse also appears to be raising concerns among state regulators about deregulation in the utility industry. Several members of Congress have noted that lawmakers and regulators cannot leave energy products in the regulatory shadows if the companies involved in the industry are harming both consumers and investors.154 In addition, there are investigations at several levels into Enron’s energy trading practices.155

III. WHAT HAD TO COME TOGETHER FOR ALL OF THAT TO HAPPEN

For an Enron to occur there had to be a confluence of events and weaknesses.156 The discussion of the factors that were required to come together for an Enron to occur provides the keys for the prevention of another such mighty collapse. This segment of the paper offers a discussion of those factors.

A. A Weak Board

It is important to note, particularly in light of calls for reform in corporate governance, that Enron’s Board was a model judging by the standards of those who urge strong corporate governance.157 A business school dean, sev-

155. Edward Iwata, Probe of California Power Crisis Grows, USA TODAY, July 17, 2002, at 1B. Those involved in the investigation are the SEC, the Justice Department, Federal Energy Regulatory Commission (FERC), Commodities Futures Trading Commission, the California Attorney General and several other state regulators there. Id.
156. In fact, judging from the diagrams, a confluence of arrows and boxes was also required.
157. William Powers, an Enron Board member, was assigned the task of evaluating the performance of the Enron Board and issued, in February 2002, the so-called Powers Report, that constituted a scathing indictment of the company’s management as well as the lack of oversight from the Board. Mr. Powers is the dean of the University of Texas School of Law
eral CEOs from other companies, an economist, a woman (for diversity), and limited insiders is a characterization of Enron’s Board’s composition. However, a closer look at the individuals illustrates not just the flaws in Enron’s Board, but the flaws in the assumptions made as governance authorities created the ideal Board profile. Kenneth Lay handpicked Enron’s Board and it was not a Board trained in the ways of FASB 125. The Board members were selected for the appearance of depth and possible connections that they brought for Enron. For example, Wendy Gramm, an economist and wife of Senator Phil Gramm was there for political connections. Other members of the Board included Dr. John Mendelsohn who not only served on the Enron Board, but also on its audit committee. The other Board members and their titles are listed below.

Kenneth L. Lay, Chair and CEO, Enron
Robert A. Belfer, CEO, Belfer Management
Norman P. Blake, Jr., Chair, President and CEO, Comdisco
Ronnie C. Chan, Chair, Hang Lung Group
John H. Duncan, Former Chair Exec. Committee, Gulf & Western Ind.
Robert K. Jaedicke, Professor of Accounting, Stanford University
Charles A. LeMaistre, Emeritus, University of Texas MD Anderson Cancer Ctr.
Paulo V. Ferraz Periera, Exec. Vice President, Group Bozano
William C. Powers, Jr., Dean, University of Texas, School of Law

158. It does give one pause that an entire Board of directors found nothing odd about partnerships named after STAR WARS, JURASSIC PARK and FASB rules. The Enron SPEs were evidence of the frat boys running the hedge fund and the irony escaped the Board.

159. Mr. Lay was bright enough to follow corporate governance standards, but also savvy enough to understand that Enron needed a certain deregulation strategy to survive.

160. Interestingly, Dr. Gramm owned no stock because she and Senator Gramm decided in 1998 not to own stock as a means of avoiding conflicts of interest. She was paid some of her Enron Board fees in stock, but it was placed in a deferral account. Reed Abelson, Enron Board Comes Under a Storm of Criticism, N.Y. TIMES (Magazine), Dec. 16, 2001, § 3, at 4.

161. Joann S. Lublin, Inside, Outside Enron, Audit Panel is Scrutinized, WALL ST. J., Feb. 1, 2002, at C1. Mr. Mendelsohn is a leading cancer researcher and president of the University of Texas M.D. Anderson Cancer Center in Houston. Interestingly, Dr. Mendelsohn also served on the Board of ImClone Systems, the company whose anti-cancer drug was not given FDA approval, whose former CEO had been indicted and which is the subject of the Martha Stewart insider trading investigation in which she is alleged to have sold $224,000 of ImClone stock the day before the public announcement of the FDA rejection. Daniel Kadlec, Sam’s Club; ImClone’s Waksal Is Accused of Trying to Dump Company Stock Ahead of Bad News; Jerry Markon, Martha Stewart Sale of Stock Under Inquiry, WALL ST. J., June 14, 2002, at C1; He Couldn’t, but His Friend Martha Stewart Unloaded Hers. Did She Do a Bad Thing? TIME, June 24, 2002, at 48. Jerry Markon, Martha Stewart Sale of Stock Under Inquiry, WALL ST. J., June 14, 2002, at C1; Andrew Pollack & David Cay Johnston, Former Chief of ImClone Systems Is Charged with Insider Trading, N.Y. TIMES, June 13, 2002, at B1. It is perhaps safe to conclude that Dr. Mendelsohn either lacks business savvy or is a horrible judge of character and/or savvy in others. Id.
Frank Savage, CEO, *Savage Holdings*
Raymond Troubh, Financial Consultant
John Wakeham, Chair, *Press Complaints Commission*
Herbert S. Winokur, Jr., Chair, CEO, *Capricorn Holdings*

While Ken Lay and Jeffrey Skilling, prior to his August 2001 departure, were the only insiders on the Board, there were problems with conflicts of interest. The first inherent conflict of interest was that Enron’s directors were the seventh highest paid directors among public companies in the U.S., with a total compensation package of $380,619. The reality is that it is tough for directors to be defiant or walk away from such an amount of money. The other inherent conflict was that the directors were selling off their stock even as they continued to serve and collect it as compensation.

Other conflicts existed in terms of the nature of Houston’s business and political community. The following chart shows various familial, political, and financial connections of various Board members and others with Enron ties. Lawyers and accountants are also included in this chart.

There were additional individual conflicts among Board members that would not require any form of SEC disclosure, but nonetheless created the beholden nature of the Enron Board. Mr. Mendelsohn, again a member of the audit committee, received a donation of $1,564,928\(^{168}\) for his cancer center from Enron and $240,250 from Ken Lay and his wife Linda since joining the Enron Board in 1999.

\(^{168}\) Inside, Outside Enron, Audit Panel is Scrutinized, supra note 161.
Herbert S. Winokur, Jr., one of Enron's original directors from its founding in 1985, serves on the Board of Natco Company, a firm that did business with Enron subsidiaries. Disclosure of directorships is not required for privately held companies.

Since Enron's collapse, other conflict issues arose. For example, Frank Savage, a senior executive at Alliance Capital Management, was a Board member and even when investors were beginning to sell Enron stock in droves as questions arose. Alliance was in an aggressive buying stance with Enron.

Lord John Wakeham, a member of the audit committee, served as a consultant for Enron's European unit for $72,000 per year since 1996. Wendy Gramm, also on the audit committee, is the director of the Mercatus Center Regulatory Studies Program at George Mason University, to which Enron donated $50,000.

Two audit committee members raise issues of independence with their conduct. Ronnie C. Chan missed over one-fourth of the Enron Board and Committee meetings in 1996, 1997 and 2000. And, Dean Robert K. Jaedicke, professor emeritus at Stanford, had been chair of the audit committee since 1985.

One-half of the audit committee members were from outside the U.S., a category of directors that raises two issues. The first issue is the problem of attendance, as the previous discussion indicates. International members of Boards of U.S. companies have lower attendance rates for both Board and committee meetings. The second issue is that there are significant differences in financial report transparency and audit standards in other countries.

Like other aspects of Enron, while the Board appeared to fit the definition of "outsiders of interdependency," the Board was, in fact, a closely connected community and company, the conflicts present and the more subtle issues of quality governance made it more difficult to Board members to raise the issues that were percolating for some time. The failure of the Board to catch obvious "red flags" is perhaps the best evidence of its com-

plicity. At the Senate hearings conducted by the Permanent Subcommittee on Investigations (PSI), Exhibit 1 was a chart entitled "Red Flags Known to Enron’s Board."¹⁷⁸ Those red flags consisted of the following:

- At the February 1999 Audit Committee Meeting, Andersen partner, David Duncan, told the Board members that Enron’s accounting practices tended to “push limits” and were “at the edge” of generally accepted accounting principles (GAAP).¹⁷⁹

- The Board was alerted to the issue of Fastow’s involvement with the SPEs because its approval was required, but it nonetheless agreed to waive company policy in order to facilitate not just the company doing business with an entity headed by one of its officers (the CFO), but that it was acceptable that the CFO earn substantial fees and returns while serving in that capacity.¹⁸⁰

- In September 1999, the Board approved the removal of White-wing, an Enron affiliate, from the company’s consolidated financial statements despite that fact that $1.4 billion in Whitewing debt was guaranteed by Enron stock and that Enron had served as financier for Whitewing’s asset purchases.¹⁸¹

- Throughout the period of 1999-2001, the Board was informed that gross revenues had more than doubled and that these funds were generated by the LJM SPE operated by Fastow, but the curious rise in revenues involving an off-the-books relationship with an entity run by its CEO did not give the directors pause.¹⁸² The Senate Subcommittee investigating Enron’s collapse found no evidence of any director questioning these odds-defying numbers and performances.¹⁸³

¹⁷⁸. PSI REPORT, supra note 58, at 12. See also Accountable: How a Bright Star at Andersen Fell Along with Enron, supra note 22 (explaining that even Mr. Duncan’s pastor was aware that Enron was pushing Mr. Duncan to go beyond his self-imposed accounting limits).

¹⁷⁹. PSI REPORT, supra note 58, at 12.

¹⁸⁰. Andrew Fastow’s conflict of interest waivers were approved on June 28, 1999 and again on October 12, 1999. Inside, Outside Enron, Audit Panel is Scrutinized, supra note 161. The audit committee conducted the review and Chairperson, Robert Jaedicke approved the motions. Id.

¹⁸². Id.

¹⁸³. Id. To paraphrase Brookings Institute Scholar Martin Mayer’s take on astronomical numbers that defy explanation (Lawrence Parks, What the President Should Know About our Monetary System (1999), available at http://www.fame.org/HTM/ President16.htm) this would be like your child coming home one day and saying, “Mom, I made $1 million dollars at the lemonade stand today.” Most parents would respond, “How on earth is that possible?” and then begin a Ward and June Cleaver-like investigation into what exactly the child was doing that day, beginning with a visit to the local video poker machines. However, Enron’s Board, were it in the position of the informed parents simply responded, “Isn’t that nice dear! Bully for you!”
• From October 1999 through October 2000, the Enron Board was asked to approve all of the Raptor I, II, III, IV\textsuperscript{184} and LJM2 and LJM3, including two additional waivers of the conflicts of interest rules for Fastow to serve as principal operating officers for these SPEs.\textsuperscript{185}

Unlike the subcommittee’s analysis of the “red flags” for the Board, it is perhaps fair to halt the analysis there. The report includes additional “red flags” for the Board, but, with due respect to the committee and its staff, it is counting red flags that occurred after the horse had left the barn.\textsuperscript{186} Perhaps the Board could have spoken up earlier with the following events, but there was little that could have been done at these junctures to save the company. The company was too highly leveraged for recovery, even assuming the continuation of the irrational exuberance of the 1990’s economy.

Bethany McLean’s “Is Enron Overpriced?” article appears in the March 5, 2001 issue of Fortune magazine.\textsuperscript{187} The committee refers to the article as “prominent” however, as noted earlier, despite the article’s dead-on questions and assessments, it fell flat.\textsuperscript{188} As will be noted in the discussion of reforms, Enron had become such a phenomenon that few dared question its achievements. Ms. McLean was tilting at windmills and only she and some short-sellers, who pocketed a handy twenty-four percent ROI on their bets against Enron, believed in March 2001 that there was something fundamentally wrong at Enron.\textsuperscript{189}

In April 2001, the Enron Board was told that sixty-four percent of the company’s assets were “troubled” or performing “below expectations.”\textsuperscript{186} Prior to this report they were told that sixty-seven percent of the company’s

\textsuperscript{184} Unlike Sylvester Stallone’s ROCKY (20\textsuperscript{th} Century Fox) series, Enron never made it to Raptor V, although it was certainly not due to any lack of financial imagination on Andrew Fastow’s part.

\textsuperscript{185} PSI REPORT, supra note 58, at 60.

\textsuperscript{186} The author once again mixes metaphors of flags and barn doors, but perhaps the reader gets the point that any red flags after this point were irrelevant because Enron had already painted itself into a financial corner from which there was no salvation. This is particularly evidenced by the general economic downturn followed by the post 9-11-01 fallout. Painting into corners and salvation are two thoughts that generally do not run together, but perhaps the reader understands what really is a critical point: once Enron went down the Raptor and LJM paths, there was no turning back. Alas, a metaphor that matches.

\textsuperscript{187} PSI REPORT, supra note 58, at 12 n.15. See Is Enron Overpriced?, supra note 13.

\textsuperscript{188} PSI REPORT, supra note 58, at 12.

\textsuperscript{189} John Olson, vice president and director of research at the Houston-based Sanders Morris Harris, publicly expressed his doubts about Enron. While every other firm and analyst had a strong “Buy” for Enron, Olson stated that “no analyst worth his salt can seriously analyze Enron.” Why John Olson Wasn’t Bullish on Enron, (Feb, 2, 2002), at http://www.knowledge.wharton.upenn.edu/013002_ss3.html. Olson added that Enron was “not very forthcoming” with information and he defied other analysts with recommendations against Enron. John Schwartz, Man Who Doubted Enron Enjoys New Recognition, N.Y. TIMES, Jan. 21, 2002, at C8. For more discussion of the role of analysts, see infra notes 274-289 and accompanying discussion.

\textsuperscript{190} PSI REPORT, supra note 58, at 12 (citation omitted).
assets were "underperforming." The significance of the April 2001 meeting is that an additional thirty-five percent of the "troubled" assets were tossed into another ten percent of that total group to create a new subtotal of forty-five percent of Enron's "troubled" assets. For those of you still following along, and it is an irony that it is even difficult to understand the way Enron computed its nonperforming and underperforming assets, forty-five percent of the original sixty-seven percent were now totally worthless. That figure translated to a $2.3 billion overstatement of assets on the company's balance sheet. Either March or April would have been a good time for the Board to come clean even if it couldn't fix the problems. Indeed, by this point there were too many Raptors for anyone to even send in Jeff Goldblum, Laura Dern or Sam Neill to the rescue.

The summer of 2001 saw things cooking with gas at Enron. The Board was informed that Andrew Fastow transferred his interest in LJM, ending the need for a review of financial transactions; they were not informed the transfer was to former Enron employee, Michael Kopper. The Board was also informed of the JEDI- and CHEWCO partnerships. If the squirreling about of company assets among employees for an international shell game involving SPEs with goofy names was not enough excitement for the Board in the summer of '01, it soon found itself coping with the resignation of CEO Jeffrey Skilling and the internal investigation of a whistle-blower memo sent

194. The author here employs cinema similes again. JURASSIC PARK the original, not II or III (Universal Studios 1993) had Jeff, Laura and Sam play the independent scientists (although they were about as independent as Wall Street analysts because they came to Jurassic Park as independent scientist whose work was going to be funded by Sir Richard Attenborough for the next ten years—Sir Richard, of course, played the creator and developer of Jurassic Park) who are to certify Jurassic Park as safe for investors and insurers. Seeing as how they were chased about the island by one too many raptors for them to handle, they decided not to sign off on the safety and risk statements. They confront only three raptors in the final dramatic scenes. You will recall the discussion supra II.B.2., that Enron had four Raptors, three LJMs, and a Fastow in the catbird seat on all of them.

195. PSI REPORT, supra note 58, at 34. Kopper resigned from Enron in June, 2001, before most of Enron's problems became generally known outside the company. Former Enron Executive Pleads Guilty, at http://www.pbs.org/newshour/updates/kopper_08-21-02.html. Kopper has proved to be the weak link in the stonewall. The author apologizes for the mixed metaphor, but clearly Kopper failed to stand tall when the going got tough. Fifteen years is the maximum sentence for his two charges. U.S. v. Kopper; Cr. No. H-02-0560(S.D. Tex. filed Aug. 21, 2002)(Cooperation Agreement). See supra note 104 and infra notes 299-334 for more discussion of this transfer and the surrounding culture at Enron.

196. PSI REPORT, supra note 58, at 13. While the recommendations for reform are some pages and footnotes away, the author believes an important safety tip for Board members is best placed here. Should anyone ask you, as a Board member, to approve transactions involving names such as Raptor, JEDI, Chewco or anything employing the numbers of accounting rules, refuse and run like the dickens the other way for it is certain that a perfect storm is on its way. The PSI missed the red flag of goofy names altogether when discussing what should have put the Board on notice.
anonymously, and later revealed to be the work of Sherron Watkins. The Board was assured the concerns expressed in the memo were nothing and it formally closed as an internal investigation in October 2001.\textsuperscript{197}

In their testimony before the PSI and in subsequent interviews with staff members conducting the Enron investigation, Board members\textsuperscript{198} insisted that both management and Enron’s outside auditor, Andersen, were not forthcoming with information about SPEs and the company’s accounting practices.\textsuperscript{199} However, at the February 1999 Enron Board meeting held in London as part of a multi-city international tour that the Board was taking to understand Enron’s extensive holdings and investments, the Audit Committee minutes reveal substantial discussion by David Duncan and other Andersen representatives of the nature of Enron’s accounting and business practices.\textsuperscript{200} In fact, David Duncan provided the audit committee with a one-page summary called, “Selected Observations 1998 Financial Reporting.”\textsuperscript{201} The format of the one-page summary was one in which Duncan highlighted the key accounting issues including “[h]ighly [s]tructured [t]ransactions,” “[c]ommodity and [e]quity [p]ortfolio,” “[p]urchase [a]ccounting,” and “[b]alance [s]heet [i]ssues.”\textsuperscript{202} These issues were then part of a matrix in which Duncan evaluated three categories of risk for the audit committee. The three categories of risk were: “[a]ccounting [j]udgments,” “[d]isclosure [j]udgements [sic],” and “[r]ule [c]hanges.”\textsuperscript{203} Duncan assigned one of three letters to each of the three categories: “H” for High risk, “M” for Medium risk, and “L” for Low risk.\textsuperscript{204} Each of the issues had at least one “H”, mean-

\begin{itemize}
\item \textsuperscript{197} Id. at 12. While discussion of the ethical culture issues at Enron and recommendations for future reforms among companies is forthcoming, another brief safety tip for Board members is in order. Should you receive a memo with this language, “Skilling’s abrupt departure will raise suspicions of accounting improprieties and valuation issues.... The spotlight will be on us, the market just can’t accept that Skilling is leaving his dream job” know that all is not OK in Dodge. \textit{Id.} (quoting Letter from Sherron Watkins, Vice President for Corporate Development, Enron, to Kenneth Lay, Chairman of the Board of Directors, Enron (Aug. 15, 2001)).
\item \textsuperscript{198} The present and past Board members who appeared before the PSI or were questioned include: Norman P. Blake, Jr., John H. Duncan, Herbert S. Winokur, Jr., Dr. Robert K. Jaedicke, and Dr. Charles A. LeMaistre. \textit{Id.} at 1-2.
\item \textsuperscript{199} \textit{Id.} at 14. Mr. Winokur, who served as chair of the Enron Board Finance Committee said, “We cannot, I submit, be criticized for failing to address or remedy problems that have been concealed from us.” \textit{Id.}
\item \textsuperscript{200} \textit{Id.} at 16 (citing \textit{Hearing Exhibit 2b, Enron Audit Committee Minutes (Feb. 7, 1999)}).
\item \textsuperscript{201} \textit{Id.} at 16. This summary sheet qualified as a red flag because in early 1999, the Board still had the opportunity to follow up on issues, halt certain transactions and prevent the further deterioration of the company’s financial position. (This deteriorating financial position resulted from Fastow’s continuing domination of financial strategy, both within and outside the company via the SPEs, courtesy of the conflict rules waived by the Board.) \textit{Id.}
\item \textsuperscript{202} \textit{Id.} Duncan also included sub-issues within these issues with more details on the general categories.
\item \textsuperscript{203} \textit{Id.}
\item \textsuperscript{204} \textit{Id.}
\end{itemize}
ing it was high risk.\textsuperscript{205} Apparently the reconciliation of the subcommittee’s assertion that the Board knew and did nothing, with the Board’s insistence that it did not know, is that while the Board may have been told of the risk, it was relying on management’s and auditors’ judgment in permitting such risk to continue.\textsuperscript{206}

If judged by simplistic standards for good corporate governance, Enron met and exceeded those standards.\textsuperscript{207} Mr. Lay and Mr. Skilling were the only

\textsuperscript{205} Id.

\textsuperscript{206} The obvious debate is whether a Board so inclined to go along with high-risk operations is performing its role of independent overseer sufficiently and whether it has satisfied its fiduciary duty without further investigation.

Further, the question arises, in the review of the minutes from the audit committee and Board meetings, whether the picture presented was somewhat sanitized. For example, the PSI Report raises the following from the minutes from the Enron Audit Committee in May 2000, “Mr. Duncan discussed the financial reporting areas that [Andersen] had determined to be high priorities due to inherent risks that were present. He stated that the ongoing high priority areas included structural transactions, the merchant portfolio, commodity trading activities, project development activities and intercompany and related party transactions.” \textit{Id.} at 18 (citing \textit{Hearing Exhibit 7c, Enron Audit Committee Minutes 2 (May 1, 2000))}.

In fairness to the Board, these discussions sounded like code and/or cover for the auditor. There is nothing in the hearings or the PSI REPORT that finds Duncan standing and screaming, “This is a gigantic fraud. These numbers are all air and we are all going down here if barometric pressure changes.” See supra note 49 (more information on the role of barometric pressure in Enron’s collapse).

\textsuperscript{207} For a review of guidelines on corporate governance, see \textit{Statement of the Business Roundtable on Corporate Governance Principles Relating to the Enron Bankruptcy}, (Feb. 11, 2002), at http://www.brtable.org/document.cfm/650 (last visited July 24, 2002). The Business Roundtable has issued a number of public statements calling on corporate officers to change their ways and regularly participated in the debates on Capitol Hill over Enron. Immediately following the President’s request for a return to ethics, John T. Dillon, the chairman of the Business Roundtable issued this statement:

\begin{quote}
The Business Roundtable actively supports the proposals put forth by the President to improve the transparency of corporate financial statements, to deal harshly with corporate wrongdoers, and to promote strong and independent governance and oversight.

In May, The Business Roundtable called for a majority of a company’s directors to be truly independent, and the audit, compensation and governance committees to be made up entirely of independent directors. We have supported CEO certification of financial statements, and endorse the President’s proposal for personal certification of true and transparent reporting in annual reports. And we have urged that violators of the law must be prosecuted immediately and severely.
\end{quote}

\textout{John T. Dillon, \textit{The Business Roundtable Statement Following The President’s Call For A “New Ethic of Responsibility,”} at http://www.brtable.org/press.cfm/734 (last visited July 9, 2002).}

While its guidelines on corporate governance are extensive, the Business Roundtable issued the following summary in a press release (the full guidelines are available at its Website):

“Independence: Boards of directors must exercise independent judgment and a substantial majority of Board members must be independent of management, as advocated in our Principles of Corporate Governance. The three key committees of the Board—the audit, compensation and governance committees—must be made up entirely of independent directors.” \textit{The Business Roundtable Statement on Restoring Investor Trust}, available at http://www.brtable.org/press.cfm/728 (last visited July 8, 2002). The statement was also pub-
insiders on the Board. Directors were independent on the surface; by a paper examination of credentials they all appeared to be independent. And qualifications such as a former business school dean did not appear to be lacking. However, as noted earlier, they had significant indirect conflicts that created a beholden type of atmosphere among Board members. At least one member of the audit committee, Dr. Mendelsohn, had limited familiarity with accounting principles, along with the substantial conflict with receiving donations to his cancer center from the Enron Foundation, as well as from Ken and Linda Lay.

It is perhaps impossible to know what the directors really understood about Enron's situation. But, it is clear that the Board had given fairly wide latitude and carte blanche supervisory controls to a financially sophisticated team of managers. Those sophisticated business people on the Board, who might have had the insight and ability to raise issues and questions about the extensive SPEs and the accounting for such, were not always full participants in Board meetings and discussions because of travel issues.

The Board appeared to be well informed with regard to the rules that applied to Enron's approach to accounting for those vulnerable areas noted in the Duncan one-page memo. However, it was in the recognition of the level of risk, where the auditors and directors may have had a breakdown in communications, which may or may not have been attributable to management. The Board accepted assurances from the auditor that it was within accounting rules, albeit aggressive in its approach. It is possible that the entire interconnected aspects of the Raptor and LJM SPEs may not have been clear, even as Duncan provided the technical language and briefing. The scope and magnitude of the off-the-books debt plus the extent of the quality of Enron's assets may not have been brought together into one global view until it was too late for Enron's salvation. This acknowledgment of per-
haps some merit in the directors’ claims is critical because meaningful reform mandates that those reforms be effective even in the face of a diabolical management team.\textsuperscript{213}

However, having noted that the directors’ claims may have some merit, however, it is critical to note an overarching problem in the directors’ conduct as to why they did not have full information from the management team about the nature of these transactions; it is in answering the “why” question that the directors may be liable for the breach of their fiduciary duties. For example, all the directors signed Enron’s 10-K filings for 1999 and 2000.\textsuperscript{214} In both years, there were nearly 3,000 separate entities listed, including some 600 entities with the same PO Box address in the Cayman Islands.\textsuperscript{215}

The continuing laxity in the approval of the waiver of the conflicts of interest policy for Mr. Fastow, so that he could operate the SPEs, is a critical issue in the ability of Enron management to continue its operations as a highly leveraged and complex hedge fund. Under Enron’s “Code of Ethics,” the CEO could waive the company’s conflict of interest rules, so that an employee could obtain personal financial gain from dealing with the company. The Enron Code of Ethics has both a general and a specific policy on conflicts of interest. The general ethical principle provides as follows:

\begin{quote}
Employees of Enron Corp., its subsidiaries, and its affiliated companies (collectively the “Company”) are charged with conducting their business affairs in accordance with the highest ethical standards. An employee shall not conduct himself or herself in a manner which directly or indirectly would be detrimental to the best interests of the Company or in a manner which would bring to the employee financial gain separately derived as a direct consequence of his or her employment with the company.\textsuperscript{216}
\end{quote}

any McLean article, \textit{Is Enron Overpriced}? Again, the horse may have already been out of the barn by the time the directors were able to put two and two together. The author recognizes that we have come to expect more of directors than the simple task of adding two and two together. However, the sheer complexity of Enron’s Byzantine finances (see supra Figures and accompanying notes 65-126) may not have been presented with sufficient clarity or with a global view. The Board deserves criticism for its cavalier waiver of the conflicts of interest rules. However, the Board’s defense that it neither knew nor could know of the events at the company until it was too late for salvaging may have a kernel of truth. Now, whether the directors should have known is a question juries will grapple with in the numerous suits pending by shareholders, pension holders and just about everyone in the Houston area.

213. Enron’s management team may have been sorely lacking in ethics and now appear to be a taciturn crowd, but we are forced to acknowledge that they were positively brilliant in their financial structuring and exploitation of loopholes in FASB and the law. Knaves and rogues they may have been, but they did know their FASBs, SLOBS, SPEs, swaps, leverage and, apparently, popular movies.

215. \textit{Id.} In fairness to the directors, however, it is possible that they would have only been given the body of the 10-K reports and not the extensive exhibits that companies must attach to the 10-K.

216. \textit{ENRON, CODE OF ETHICS, EXECUTIVE AND MANAGEMENT 12 (July 2000).} Author in possession of this code (which, by the way, she was able to obtain unopened from e-Bay for a none-of-your-business price; the author viewed it as a donation to the pitiful retirement plan.
The specific provisions that appear later in the code provide:

[T]he employer is entitled to expect of such person complete loyalty to the best interests of the Company. . . . Therefore, it follows that no full-time officer or employee should:

(c) Own an interest in or participate, directly or indirectly, in the profits of another entity which does business with or is a competitor of the Company, unless such ownership or participation has been previously disclosed in writing to the Chairman of the Board and Chief Executive Officer of Enron Corp. and such officer has determined that such interest or participation does not adversely affect the best interests of the Company.

While the CEO could approve a waiver of the policy for everyone except himself, the Board nonetheless, ran the waiver for Fastow at least three times.218 Despite this knowledge, that the Board members did not dispute, no one on the Board hesitated in his or her approval for the waiver of the conflicts rule, as well as the increasing role of Andrew Fastow in SPEs.219 Even as it was approving the waiver of the conflict policies for Fastow, the Board was not devoting a great deal of time to understanding the underlying transaction that found Fastow in need of a waiver of the conflicts policy.220 At the first meeting on the LJM1 partnership, the Board approved the conflicts waiver, authorized a major stock split for Enron, voted to increase the number of shares for employees in the company’s stock compensation program, approved the purchase of a new corporate jet, authorized an investment in a

of the Enron employee who was quite industriously auctioning off codes of his failed company)(on file with California Western Law Review).

217. Id. at 57.
218. PSI REPORT, supra note 58, at 24. Technically, the Board Minutes provide that the Board was asked to ratify the waiver that Mr. Lay had already granted to Mr. Fastow. Dr. Jaedicke said that the ratification was not actually a waiver but an enforcement of the Code of Ethics. This is because the Code permitted the waiver in the discretion of the CEO and the effect of the Board’s ratification was simply to state unequivocally that the conflicts policy and the waiver policy were valid. Id. at 25 n.59. There are those who theorize that the Board ratification was at the suggestion of Andersen and David Duncan. In a May 28, 1999 e-mail to David Duncan, Benjamin Neuhausen, a member based out of Chicago of Andersen’s Professional Standards Group, wrote, “[s]etting aside the accounting, idea of a venture entity managed by CFO is terrible from a business point of view. Conflicts galore. Why would any director in his or her right mind ever approve such a scheme?” Id. at 25. David Duncan replied on June 1, 1999, “[O]n your point 1 (i.e., the whole thing is a bad idea), I really couldn’t agree more. Rest assured that I have already communicated and it has been agreed to by Andy that CEO, General [Counsel], and Board discussion and approval will be a requirement, on our part, for acceptance of a venture similar to what we have been discussing.” Id. at 25-26 (alterations in original). Andersen appeared to be counting on the Board catching it and saving them, but the Board either saw the request differently or did not see its significance or the potential conflicts, three times into the ratification. Id. at 25 n.59. Yet another important safety tip for directors emerges: if the CEO asks you to waive provisions in the Code of Ethics, you perhaps, have a problem.
219. Id. at 26-27.
220. Id.
Middle Eastern power plant, discussed a reorganization/restructuring at Enron that Mr. Lay had planned, and approved the LJM1 creation.\textsuperscript{221} The minutes of the meeting show that the meeting lasted one hour, that there was little discussion or debate, and that the directors had received the information on LJM only three days prior to the meeting.\textsuperscript{222} In terms of fiduciary responsibility, the argument can be made, that the breach of duty is the Board’s failure to devote the time necessary for understanding and debating the LJM plan.\textsuperscript{223} This was a timid Board pitted against aggressive accounting managers, a volatile combination.

There were moments, however, when the Board perhaps realized that there were issues in and among Fastow, his initialed LLPs, and the Raptors. By October 1999, when additional approvals for LJM2 and Fastow waivers were requested, the proposals were first presented to the Finance Committee.\textsuperscript{224} Board members agree that the committee held a “vigorous discussion.”\textsuperscript{225} No one on the Finance Committee or the Board asked to see or ever read the private placement memoranda for the LJM series.\textsuperscript{226} In fact, one Board member received information on the LJM2 series as a potential investor, but confessed that he tossed it before even reading it.\textsuperscript{227} In an indication of how powerless Enron management perceived the Board, Mr. Fastow, prior to the October Board meeting in which LJM2 was approved, had already completed negotiations with Merrill Lynch for the marketing of the LJM2 partnerships.\textsuperscript{228}

The LJM3 partnership was approved in October 2000 in a perfunctory fashion. The approval was requested at the same time LJM issued its first annual report, but the Board neither requested the report nor did management offer it.\textsuperscript{229} In addition, the Board received assurances that that there would be sufficient internal controls in place to manage the potential con-

\textsuperscript{221} Id. at 27 (citing ENRON BD. OF DIRS., MIN. (6/28/99)).
\textsuperscript{222} Id. at 27.
\textsuperscript{223} Some Board members indicated in interviews with staff members that their approval of LJM and the Fastow waiver was based on their understanding that they were approving a one-time transaction, not a steady stream of asset movements and manipulations. Id. at 26 n.63. However, it is interesting to note that these approvals took place via conference call, in an emergency meeting called just two days before the end of the reporting period for that quarter (June 28, 1999). Id. at 26-27.
\textsuperscript{224} Id. at 28.
\textsuperscript{225} Id.
\textsuperscript{226} Id.
\textsuperscript{227} Id. The Board members also never reviewed the Annual Reports from LJM that included the compensation paid to Mr. Fastow and others in their roles as principals of those companies. Id.
\textsuperscript{228} Id.
\textsuperscript{229} Id. Many Board members expressed the view that they were relying on the opinions of both Andersen and Enron’s legal counsel, Vinson & Elkins, in permitting such a smooth approval process. In other words, these Board members trusted auditors and legal counsel. See id. Big mistake.
conflicts of interest. With each requested LJM approval, there were additional controls. By the time the Board faced LJM3, it had assurances that all Enron and LJM transactions would be approved by Causey, Mr. Skilling, and that the Audit Committee would conduct an annual review of all of the transactions involving, among, and, as we now know, between the firms.

By the request for LJM3 in October 2000, the Board was getting testy and imposed a requirement of quarterly reviews of LJM transactions and a one-time look at Mr. Fastow’s compensation, with the Finance Committee conducting the transaction review and the Compensation Committee conducting the Fastow review. The Finance Committee reviews, as well as the standing reviews by the Audit Committee proved to be cursory. Management furnished all the information; it consisted solely of a list of the Enron/LJM transactions and did not include supporting documentation. The presentation and lasted from 15-30 minutes in terms of committee and Board discussion time. No director was struck, then or when interviewed by the Congressional staff members, by the sheer magnitude of the LJM deals. In the 1999 report on LJM transactions, the Board was told that LJM had generated $200 million in earnings in eight days and had an internal rate of return of eighteen percent.

230. In the original LJM proposal, the Board was told that Richard Causey, the company’s Chief Accounting Officer, would be required to approve all transactions between Enron and LJM. Id. at 29. However, we now know that Mr. Causey and Mr. Duncan were very cozy. See supra note 23.

231. PSI REPORT, supra note 58, at 30.

232. Id. at 29-30. In the special report commissioned by the Enron Board (again, after the horse was out of the barn), there was a finding that there was a failure of the proposed internal controls in that LJM transactions occurred without the necessary routing and approvals that had been promised to the Board. Id. at 30. For example, the process required that a Deal Approval Sheet (DASH) be completed and circulated among the necessary officers for approval of LJM transactions. Id. There were some transactions with no DASH sheets, some with DASH sheets without signatures and some transactions were completed before the DASH sheets had the authorized signatures. Id. There is testimony from staff members that they experienced pressure from Mr. Fastow on these deals to get better terms for LJM. The PSI found internal memos expressing concern about lax compliance with the DASH policies. Enron legal counsel Jordan Mintz wrote, “[T]he Company needs to improve both the process it follows in executing such transactions and implement improved procedures regarding written substantiation supporting and memorializing the Enron/LJM transactions.” Id. at 30 n.81 (alteration and emphasis in original). Mr. Mintz also emphasized the need for “more rigorous testing of the fairness and benefits” of these transactions. Id.

233. Id. at 30.

234. Id. at 32.

235. Id.

236. Id. at 33.

237. Id. The PSI REPORT notes that during 2001, the Finance Committee did not ask any questions when informed that Fastow had sold his interest in LJM and did not inquire as to why the quarterly reports had ended. Id. (citing Hearing Record at 175, 179). These lapses can be viewed as evidence of breach of fiduciary duty. Well, that may be, but in August 2001, when the Fastow sale occurred, there was nothing the Board could have done to save the company. Back when Fastow asked for LJM was when the Board should have been proactive.
It is on the issue of Fastow’s compensation that the Board has its greatest vulnerability and is evidence of the deferential nature of the Enron Board. When the one-time review of Fastow’s compensation was announced as a precondition for approval of another LJM transaction, Dr. LeMaistre, as head of the Compensation Committee requested information on his compensation from Mary Joyce, Enron’s senior Compensation Officer.238 His request applied to all “16(b)” officers.239 One year would pass and he would still not have the information from Ms. Joyce.240 At this point the Board directed Dr. LeMaistre and John Duncan to personally approach Mr. Fastow, to obtain the information.241 Understanding the fearful task ahead, of actually confronting the CFO of a company on whose Board they sit, these two directors asked legal counsel for Enron to draft a set of questions that they could take with them to meet Mr. Fastow.242 For those of you still keeping score, this was a Board that had to send a delegation with a script from legal counsel to get information from the company’s Chief Financial Officer about how much money he was making from deals with the company and how much his family members were also making from these deals.

The directors did get some information from Mr. Fastow, that he had made $45 million from LJM 1 and 2, but Mr. Fastow never did return phone calls providing the directors with his return on investment.243 When Dr. LeMaistre and Mr. Duncan asked Mr. Fastow whether any other Enron employees were involved in financial relationships and transactions with the

238. Id. at 34-35.
239. “16(b)” refers to those levels of officers in a company to whom Section 16 of the 1934 Securities Exchange Act applies. Securities Exchange Act, § 16(b), 73 P.L. 291, 73 Cong. Ch. 404, 48 Stat. 881 (1934). These are the officers subject to the six-month, in effect, holding period on their company shares, a timing prohibition to curb acting on inside information. 15 U.S.C. A. § 78p(b) (West 2003).
240. PSI REPORT, supra note 58, at 35.
241. Id. The rich comedic possibilities here abound. One Board member approaches a staff member and asks for all full compensation disclosures on all Officers so as not to irritate Mr. Fastow. Nothing happens for a year so the Board, timidity abounding, sends two Directors to meet the troll to find out money figures.
242. Id. The film OLIVER (RCA COLUMBIA 1968) comes to mind with the two directors approaching Mr. Bumble, “Please, sir, could I have some more information?” Could this Board have been any more obsequious? Take a gander at the script legal counsel drafted for these two directors and keep this deferential tone in mind as we explore the culture of Enron infra at notes 299-323 and accompanying text:

We very much appreciate your willingness to visit with us. Andy, because of the current controversy surrounding LJM I and LJM II, we believe it would be helpful for the Board to have a general understanding of the amount of your investment and of your return on investment in the LJM entities. We understand that a detailed accounting of these matters will be done in connection with the response to the SEC inquiry. In responding to our questions with respect to your interest in the LJM entities, we would appreciate your including any interest . . . that the members of your family may have had in the entities.

A Primer on Enron: Lessons From A Perfect Storm of Financial Repo

A Primer on Enron

company, he responded that there were not. A short time later, during the Powers investigation that the Board commissioned, they discovered that Fastow and other employees had created the Southampton partnership, which consisted of a group of employees investing in LJM.

While it is possible that the Board did not understand the scope of extent of these off-the-books companies and the transactions, their lapse occurred in the failure to ask for more information despite a series of "red flags." The question for their liability as well as the focus of reforms is not whether they knew, but whether they should have known and how they could have found out.

C. Auditors, Analysts and Business Press

Leg two of the three-legged perfect storm that allowed an Enron to happen, is best characterized by failure of external controls. Auditors, analysts, and the business press are, at least in theory, independent outsiders who should be able to detect an Enron house of cards, and then say so publicly. However, Enron was able to create its complex financial scheme, only with a complicit Board accompanied by complicit auditors, complicit analysts, and a complicit business press. Any one of these four groups, the outsiders plus the Board could have brought the Enron train to a screeching halt. That none did, or even raised sufficient questions to cause the investing public to withdraw its support, also warrants examination if meaningful reforms are to take hold. Even with Board weaknesses or failures, investors have traditionally had the resource of third parties to turn to for candid evaluation of a company's performance and the veracity of its financial statements and claims. In this perfect storm, the auditors, analysts, and business press joined Enron, as a sort of cheering section for its ongoing, odds-defying success.

I. Weak Auditors

One of the first weaknesses that consumed the auditors in Enron and other companies was the issue of conflicts of interest. Enron paid Arthur Andersen $25 million for its audit work and $27 million for non-audit work, including both tax and consulting services. Andersen indicated that it did not feel its audits were compromised by the consulting work and Andersen

244. Id.
245. Id. at 36-37. Southampton was quite a deal for employees. They pumped in $5,800 and received $1 million in immediate returns. Not bad work if you can get it without going to jail. Bill Saparito, Speak No Evil, TIME, Feb. 18, 2002, at 34. The estimated total return to Fastow and fellow employees who invested was $43 million. Id.
But, Andersen had more subtle conflicts. The staffs of Enron and Andersen were inextricably intertwined. As noted earlier, David Duncan was a close friend with Mr. Causey, the company’s Chief Accounting Officer and the man responsible for approving the SPE transactions that Mr. Fastow handled as both CFO and principal in the off-the-books entities. Further, the employees at Enron were not sure who the Andersen employees were and who worked for Enron; because many Andersen staff had permanent offices at Enron, were often then hired by Enron, and also were beneficiaries of office parties, just as Enron employees were.

One of the reasons for the staffs of the auditor and the client to be so inextricably intertwined is that Andersen performed and reviewed both the internal and external audit functions. The two were originally separated because independence is compromised when those reviewing the work and judgment calls, did the work and made the calls.

In addition, for Enron to continue for as long as it did with so many intricate accounting issues, the auditors had to buy into “aggressive accounting.” While Andersen has used its employees since the fall of Enron as a

247. Id. The Council of Institutional Investors does, however, beg to differ. Press Release, Council of Institutional Investors, Council of Institutional Investors Calls for Auditor Reforms, (Feb. 4, 2002), at http://www.cii.org/pressreleases/pressrelease1.asp. It is aiding unions and other investors in their shareholder proposals at the following corporations to urge companies to voluntarily adopt conflict-of-interest policies that restrict the companies’ audit firms to performing either audit services or consulting services, but not both. Id. Following each company’s name is a number in parenthesis that indicates the ratio of the company’s non-audit fees to its audit fees: Allegheny Energy (3.1:1); Ameren (2.3:1); American Power Conversion (5.1:1); Apple Computer (12.6:1); Avon (2.9:1); Best Buy (4.4:1); Boston Properties (4.8:1); Bristol Myers Squibb (4.5:1); Constellation Energy Group (4.1:1); Delphi Automotive Systems (7.7:1); Dominion Resources (1.2:1); Duke Energy (3.5:1); Equitable Resources (3.9:1); First Energy (5.9:1); Gap (13.5:1); Halliburton (1.1:1); John Hancock Financial (9.75:1); Johnson & Johnson (4.6:1); Kmart (10.4:1); Lafarge North America (3.1:1); Liz Claiborne (2.2:1); Manpower (3.6:1); Marriott International (4.7:1); McGraw-Hill (2.2:1); Motorola (16:1); PG&E (3.6:1); Reliant (5.1:1); TXU (3:1); VF (5.2:1); and Walt Disney (4.1:1). 248. PSI Report, supra note 58, at 8, 29.

251. Id. Professor Malkiel likens giving the internal and external audit functions to the same firm as akin to having the students grade their own papers and then handle appeals on their grades. Id.

252. Id. Continuing long-standing tradition in law and ethics, accountants refer to “cooking the books” as “earnings management” or “aggressive accounting.” Shantan Pesaru, Tech
sympathetic public relations campaign to save the company and there are indeed employees at Andersen who were not involved in cooking books, the hard facts illustrate that Andersen developed a reputation and peculiar skill for "aggressive accounting." In addition to Enron, Andersen’s audit clients include: Global Crossing (in bankruptcy with questions about its accounting practices), WorldCom (in bankruptcy with the admission that it understated expenses by $4 billion), Qwest Communications (now the subject of an SEC inquiry), Level 3 Communications (issues with restatements of financial information), Waste Management (just now recovering from issues surrounding its financial reports), Baptist Foundation of Arizona (in bankruptcy with Andersen recently settling suit with investors for $100 million), and Sunbeam (in litigation over accounting and restatement issues).

The audit rules themselves permit the complicity that David Duncan and Andersen provided Enron, because they were able to take the approach of absolute compliance with the letter of the auditing laws while failing to acknowledge the overall financial picture of the company, as presented in their certified statements for the company, was not accurately portrayed. In other words, Andersen was able to sign off on the Raptors I, II, III, IV and V and other SPEs because, technically, Enron was in compliance with accounting rules. The question that now emerges is whether those accounting rules are fundamentally flawed and require modification, to a less detailed and

Profs Expose Fuzzy Accounting, (Aug. 23, 2002), at http://www.cyberbuzz.gatech.edu/technique/issues/fall2002/2002-08-23/21.html. But accountants’ creative labeling in order to avoid addressing the fundamental ethical or legal issue involved is not unique to accountants. For example, the youngsters who download music from the Internet do not refer to it as “copyright infringement,” it is “peer-to-peer file-sharing.” Simon Lim, Share No More, NANYANG CHRONICLE (2002), at http://www.ntu.edu.sg/studorgn/chronicle/digital3.html. Taking the answers into an exam is not “cheating,” it is “using memory pegs.” Marianne M. Jennings, Morality beyond the Excuses, MERIDIAN (Jan. 12, 2001), available at http://www.meridianmagazine.com/ideas/991231moralexecuse.html. One of the non-quantifiable causes of Enron and other companies’ collapse is the unwillingness of those involved to place a bright light of reality on the practices, decisions and financial reports of the company.

255. Ken Brown, Andersen Memo Urged Caution with Risky Clients, WALL ST. J., Apr. 12, 2002, at A14. The issues in Global Crossing and WorldCom are the same—cooking the books.

more British approach of the overall accuracy of the financial statements, not compliance with individual and highly technical rules.257

However, in addition to the rules and the conflicts, there is the reality that David Duncan and Andersen were willing to accommodate Enron and its executives with their desires when it came to accounting for both the company’s contracts, the SPEs, and the related debt.258 While Mr. Duncan regularly met with the Audit Committee and pointed out, Enron was embarking into uncharted accounting territory because of the nature of its business, and that management had a great deal of discretion in its reporting of the numbers, in areas such as Enron’s energy contracts; he did not halt the steam engine’s progress toward the brick wall.259 In fact, on one single sheet of paper used as Mr. Duncan’s briefing paper for the February 1999 Enron Audit Committee meeting, Mr. Duncan wrote, “[o]bviously, we are on Board with all of these, but many push limits and have a high ‘others could have a different view’ risk profile.”260 Mr. Duncan conveyed the message of risk at the insistence of Andersen legal counsel.261 While Mr. Duncan pled the Fifth Amendment and declined to testify at the Congressional hearings on Enron and Andersen’s role,262 Andersen’s legal counsel confirmed that Mr. Duncan had, in fact, communicated what was written on his one page of briefing notes to the Enron Audit Committee in February of 1999.263

259. The author has mixed metaphors again, uncharted waters being coupled with steam engines and train tracks. However, the mixed metaphor makes the point that David Duncan was not exactly falling on his sword at the audit committee meetings. Now the author has injected the battlefield into the mix. Perhaps it would serve literature better if we said that David Duncan did not lie down on the tracks to stop the train. Perhaps it would be better for literature if the author would wrap this up, at 200 or so footnotes or sooner. The documentation on the non-sword audit committee meetings can be found at PSI REPORT, supra note 58, at 15-18. See also supra note 200 for a discussion of Mr. Duncan’s matrix analysis of risks and issues related to Enron’s accounting.

260. PSI REPORT, supra note 58, at 17.

261. See id. This was different legal counsel than Nancy Temple, the Andersen lawyer whose e-mail to David Duncan about document destruction policies that was the “smoking gun” in the verdict against Andersen for impeding justice. Peter Martin, Subject: Wrecking the Company: The Andersen Verdict Shows that Even an E-mail that Seems Innocuous May End up Destroying a Business, FIN. TIMES (LONDON), June 18, 2002, at 23. And here also is another important safety tip: If the company you are auditing is the subject of an SEC investigation, is having difficulty securing loans, and has a share price hovering around nine cents, you may want to look into it when the audit partner assigned to the client company calls and asks about document destruction. Just another safety tip.

263. PSI REPORT, supra note 58, at 17. Legal counsel for Tom Bauer at Arthur Andersen wrote to the committee:
Internal Andersen documents also reveal that the auditor was concerned. In 2000, Mr. Duncan and four other Andersen partners prepared what they referred to as the “[r]isk [d]rivers” for Enron.264 Included in their list were “[m]anagement [p]ressures” and “[a]ccounting and [f]inancial [r]porting [r]isk,” with the following comments about these drivers:

- “Enron has aggressive earnings targets and enters into numerous complex transactions to achieve those targets.”265
- “The Company’s personnel are very sophisticated and enter into numerous complex transactions and are often aggressive in structuring transactions to achieve derived financial reporting objectives.”266
- “Form over substance transactions.”267

Despite clear recognition of the accounting issues and concerns, neither Duncan nor anyone at Andersen chose to offer Enron an ultimatum or allow the media to resolve the issue.268 Andersen and Duncan saw the issues in accounting at Enron, reviewed their substantial risk, but still refused to take the steps necessary to reveal the issues to the auditor.269 It was not until October of 2001 that this admission came, when Enron was just two months away from bankruptcy, that Duncan says he realized that the way and structure had been created violated GAAP.270 Andersen served as Enron’s auditor through-

As you requested, on behalf of Tom Bauer, a partner in Arthur Andersen, I am responding to your inquiries. To the best of Mr. Bauer’s knowledge, the handwriting on the document is the handwriting of David Duncan. It reflects what Mr. Duncan and others discussed at an Enron Audit Committee meeting held on February 7, 1999. The risk profile of Enron as reflected in the document was discussed at that meeting with and among the members of the Audit Committee and the representatives of the Company who attended. Certain risk areas were described as “pushing the limits,” [sic] as reflected in Mr. Duncan’s notes, or as being “at the edge.”

PSI REPORT, supra note 58, at 17 (omissions in original) (citing Hearing Exhibit 3, Selected Observations 1998 Financial Reporting (David Duncan talking points or Audit Committee Presentation, Feb. 7, 1999)). The minutes of a May 2000 Audit Committee meeting provide: “Mr. Duncan discussed the financial reporting areas that [Andersen] had determined to be high priorities due to inherent risks that were present. He stated that the ongoing high priority areas included structured transactions, the merchant portfolio, commodity trading activities, project development activities and intercompany and related party transactions.” PSI REPORT, supra note 58, at 17 (alteration in original) (quoting Hearing Exhibit 7c (Audit Committee Minutes from May 1, 2000) at 2).

264. PSI REPORT, supra note 58, at 18.
265. Id.
266. Id.
267. Id. The clear communication in these documents is that Andersen believed that Enron was pushing limits, engaged in aggressive accounting and constituted a risk for the company.

throughout its evolution and, despite briefings to the Audit Committee, it could not bring itself to veto any new partnership, book revenues differently or simply admit that Enron may have pushed the envelope too far.\textsuperscript{271} Forensic accountant, Howard Schilit, has noted that Andersen’s relationship with Enron represented the worst of complicity “[a]uditors should be like referees in football. Sometimes you don’t like the zebras, but that’s just too bad.”\textsuperscript{272} A cartoon in the \textit{Wall Street Journal} in early 2002, showed two executives sitting in a prison cell with one saying to the other, “[I]t’s just say, with accounting, it’s best to think inside the box.”\textsuperscript{273}

\section*{2. Analysts Who Said Nothing or the Opposite of What They Knew to be True}

Even if the Board and the auditors failed in their roles of outsiders, with the ability to change the practices, and hence destiny of a company and its shareholders, there should have been the presence of analysts with sufficient skills to point out the deficiencies in Enron’s financial statements and its levels of disclosure. The analysts during this era, however, were also suffering from conflicts of interest issues.

In the four-month period following Enron’s bankruptcy, there were significant questions raised about why analysts had been “go-go” on Enron when there were, fundamentally, so many problems with it. At least a partial answer came through the revelations in an investigation by New York’s Attorney General, Eliot Spitzer.\textsuperscript{274} In April 2002, Mr. Spitzer announced that he conducted a ten month investigation into the practices of Wall Street analysts and charged Merrill Lynch with several violations of New York laws that focused on a series of e-mails his office had uncovered.\textsuperscript{275}

The e-mails revealed that analysts for Merrill Lynch often felt very differently in private about the companies that they were recommended to clients, but made the recommendations publicly because either their compensation was tied to the success of an offering or company that was a Merrill client or they were prohibited from candidly discussing any Merrill clients.²⁷⁶ Following a $100 million settlement with Merrill, Mr. Spitzer continued his pursuit of the conflicts issues among analysts,²⁷⁷ which offers a partial explanation, as to their taciturn behavior on certain stocks such as Enron, which were clearly courting disaster in terms of their share prices vis-à-vis performance and actual cash flow.

Mr. Spitzer was able to uncover yet another source of conflicts for analysts, the so-called “bonus memo.” The “bonus memo” is written by analysts at the end of the year and is used as a means of touting for management, as it makes its bonus determination for analysts, the achievements of the analyst over the past year.²⁷⁸ Mr. Spitzer found evidence that in the bonus memos, analysts revealed that their positive recommendations were the impetus for obtaining and retaining certain clients for purposes of public offering business.²⁷⁹ The year-end memos, according to initial disclosures from Spitzer’s investigations, reveal that:

[M]any of the major firms on Wall Street during the bull market of the late 1990s wooed analysts with multimillion-dollar contracts based on their ability to generate investment-banking fees. And many firms, in evaluating analysts during bonus time, scrutinized the analysts’ roles in helping their firms win banking business.²⁸⁰

There is other evidence of significant ties and conflicts between firms that are brokers, investment bankers, and the resulting relationship conflicts of their in-house analysts, to the buying and consulting/investing side of the house. For example, Salomon Smith Barney is under scrutiny for its rela-

²⁷⁶. Patrick McGeehan, Merrill Chief is Apologetic Over Analysts; One Dismissed, N.Y. TIMES, Apr. 27, 2002, at C1. The initial investigation focused on Henry Blodget, Merrill Lynch’s Internet analyst. New York Attorney General Turns up Heat on Wall Street, supra note 273. While issuing buy-buy recommendations publicly on certain Internet stocks that were Merrill clients, Mr. Blodget said privately in e-mails that those same stocks were a “dog,” or “crap.” Id. In July 2000, one Merrill analyst called InfoSpace stock “a piece of junk” to friends even though he had given it the firm’s highest rating publicly. Merrill Lynch Deal Won’t Restore Investors’ Trust, USA TODAY, May 23, 2002, at A10. Merrill settled one case brought by an investor who followed the recommendation on InfoSpace because the analyst said the stock would reach a target of $100 per share. New York Attorney General Turns up Heat on Wall Street, supra note 274. Shortly after the investor purchased, the stock plummeted to $1.45 per share. Id.

²⁷⁷. Charles Gasparino, Latest Fuel in Analyst Probe: ‘Bonus’ Memos, WALL ST. J., May 30, 2002, at C1. Mr. Spitzer also extracted a significant number of promises from Merrill. Those promises are covered as part of the reform discussions in Section IV infra.

²⁷⁸. Id.

²⁷⁹. New York Attorney General Turns up Heat on Wall Street, supra note 274.

Andersen could not have been blissfully ignorant of the issues raised by WorldCom in the SALT meetings. Some of the analysts and investors were also certainly aware. One person who knew of the WorldCom's debt and accounting issues was Jack Grubman, who was asked to testify before a House investigating committee. Grubman was the person at Salomon who had been giving WorldCom its highest rating. They, too, were aware of the issues that would ultimately lead to the company's demise. Why he did not downrate WorldCom when the likelihood of bankruptcy increased is a question that the committee must address. How could he make a high rating when the company's future was so uncertain? We need to be able to see the surface clues that would have been obvious to us knowing what we know now.

Apart from the conflicts that existed with regard to client and customer relations, Enron appeared to enjoy a sort of deference from analysts for there seemed to be an unwillingness to point to any chinks in the armor or declare that the emperor had no clothes, despite odds-defying performance by the company and incongruent financial statistics. Why analysts were so differential and unwilling to buck the trend toward Enron worship remains unclear. Some have attributed it to the distance that Andrew Fastow kept between himself and Wall Street: "[t]he CFO never came to analyst conferences; he'd always be buried somewhere with his financiers. Analysts were duped. They were never able to see the off-the-balance-sheet partnerships; they never saw how earnings were being puffed up by mark-to-market accounting." One analyst who did see and state the Enron problem long before its collapse, John Olson, gleaned his information from talking with former employees who described the company as doing everything "on the edge." Interestingly, executives from Enron quickly dogged those who did voice concerns. When Mr. Olson issued his cautions to clients about Enron, Ken Lay wrote a letter to Mr. Olson's employer saying, "John Olson has been wrong about Enron for over 10 years and is still wrong. [B]ut he is con-

285. See supra III.A. for discussion of the surface clues that should have been obvious to those with just minimal financial reading skills.
286. Why John Olson Wasn't Bullish on Enron, supra note 189.
287. Id.
Mr. Olson maintains that too many Wall Street analysts in search of the fame and glory are “schnuckels,” a Yiddish word for dupe. Olsen, like Bush, may have limited understanding of foreign languages; the Yiddish word is likely “schnook.”

3. The Business Press

If the Board, auditors, and analysts failed in their role as outsiders, with the responsibility of examining companies and their practices thoroughly and with skepticism, there still remained the possibility that an independent business media could offer insight and revelations on a company like Enron. Again, however, there were conflicts. It was not until well into the bull market that networks such as CNBC, CNN and MSNBC adopted conflicts policies for their on-air talent and for guests appearing on their shows. Many were using the media outlets for purposes of pumping and dumping shares, which they held even as they appeared on the shows, to tout their excellence as an investment. Even following the Enron collapse, Lou Dobbs of CNN’s Moneyline failed to disclose, even as he adamantly defended Andersen, that it was the auditor for a company in which he holds a substantial interest.

Even when conflicts did not exist, the business media were not particularly aggressive in picking up issues or stories. For example, the issues surrounding Enron should have been obvious using just basic financial analysis, but only one reporter picked up on these issues, and her story fell flat. Peter Eavis of TheStreet.com also raised questions about Enron, including that of how Enron’s profit may have been added by deals related to LJM.

He has accepted speaking fees in the past from the company and was promised an exclusive interview with Joseph Berardino, the former Andersen CEO. Id. Andersen has also been a CNN sponsor in the past. Id.

293. Felicity Barringer, Enron’s Many Strands: Early Scrutiny; 10 Months Ago, Questions on Enron Came and Went with Little Notice, N.Y. Times, Jan. 28, 2002, at A11. Fortune’s managing editor, Rik Kirkland said Bethany McLean’s March 2001 story on Enron was “prescient, but it kind of went out and sank.” Id.

294. Id.
wrote of his concerns about Fastow's dual roles, but no mainstream media outlets picked up on his observations or questions.295

One observer explained that the reason the story was ignored was, "[t]he whole thing was so opaque and so difficult to conceive and so well hidden that it was just beyond the tools of journalism."296 Inasmuch as Ms. McLean gained her insight and story from a short seller,297 there is perhaps a safety and prevention tip for the future—check with the shortsellers to see what's really going on in the market.298

D. The Enron Culture

When all else fails, meaning the Board, auditors, analysts, and press have not taken hold of a company and questions surrounding it; there is the possibility that an employee or former employee might take the issues affecting the company to the public. The Enron culture was not one that was conducive to open feedback. In fact, the Enron culture was a contributing cause to the ethical collapse of the company.

1. A Culture of Conflicts

As noted earlier in the discussions regarding Mr. Fastow's role in the SPEs, the issue of conflicts of interest took a bit of a back seat at Enron. Further, the Fastow issues were not the only conflicts problems. Mr. Lay's son, Mark, with his father's help, created two privately held technology firms, and within months after the companies were created, Enron signed contracts to do business with both of these Lay companies and even invested in one of

295. Id.
296. Id. Still, as Enron's stock price was plummeting, the analyses did not improve and there was little additional coverage of these questions raised by a few reporters who were clearly not in the mainstream business popular press.
297. Id.
298. And another important safety tip: If the CEO of the company leaves suddenly, as Jeffrey Skilling did in August 2001, and the share price is dropping, it is a good time to begin asking questions. There were similar lapses of coverage with regard to WorldCom. A federal judge dismissed a shareholder lawsuit against WorldCom filed on June 1, 2001 on March 29, 2002. The lawsuit included affidavits from 100 employees describing the aggressive accounting practices that they had witnessed at WorldCom. Despite the suit appearing in newspapers and the complaint available for anyone to examine along with the list of affiants and their addresses, no members of the press pursued the issue. Neil Weinberg, Asleep at the Switch: WorldCom Book-Cooking was Laid Out a Year Ago: Too Bad No One Listened, FORBES, July 22, 2002, at 38. In dismissing the suit, the federal judge noted that the numbers are so large and the magnitude of the alleged fraud so expansive that it was impossible to believe. Id. The judge and the media apparently fell into the trap of the bigger the fraud, the easier it will be to perpetrate.
them. In addition, Enron hired Mark Lay as a consultant for a salary of $1,000,000 for a three-year contract and 20,000 options for Enron stock.

Enron used an agency that was co-owned by Mr. Lay’s sister as its travel agent. Sharon Lay was an owner of Alliance Worldwide Travel which booked more than $10 million in travel for Enron and its employees.

2. The “Culture of Arrogance:” Sycophants, Autocrats and Fear

A sense of the Enron culture emerges through the testimony of the anonymous internal memo, later found to have been authored by Vice President for Corporate Development, Sherron Watkins. Ms. Watkins used the term “arrogance” in her testimony as well as “intimidating.” The arrogance that Ms. Watkins referred to was manifest in the spending. At the executive meeting in January 2001 at the Hyatt Regency Hill Country Resort in San Antonio, there was flowing champagne, an open bar, fistfuls of free cigars, a company-sponsored racecar, and executives boasting three Ferraris in their garages.

What she documents in that memo and later testified regarding in the Congressional hearings is an ongoing pattern among companies involved in complete ethical collapse. When companies implode, generally because of financial reporting issues undertaken because of an inability to sustain outstanding financial performance, there is a clear pattern in terms of the culture that consists of: an autocratic CEO, and perhaps many of his or her immediate reports; fear among employees so expansive that they will not raise even the most obvious issues; and punishment for employees who question company processes or procedures.

Ms. Watkins was a former Andersen employee who had been hired into the executive ranks by Enron.\textsuperscript{307} Ms. Watkins wrote a letter to Kenneth Lay on August 15, 2001, that included the following:

I am incredibly nervous that we will implode in a wave of accounting scandals. I have heard from one manager-level employee from the principal investments group say, "I know it would be devastating to all of us, but I wish we would get caught. We're such a crooked company."\textsuperscript{308}

While she zeroed in on Mr. Skilling and Mr. Fastow as responsible for the accounting improprieties she believed existed, she also warned that Mr. Skilling's swift departure would raise questions.\textsuperscript{309} She urged Mr. Lay to simply "come clean" and "point the finger" at these two, describing them as follows, "[t]here were swindlers in the emperor's new clothes discussing the fine materials that they were weaving."\textsuperscript{310} She concluded that because of the accounting improprieties, "[I]t sure looks to the layman on the street that we are hiding losses in a related company."\textsuperscript{311}

In her memo, she listed Cliff Baxter as someone Mr. Lay could talk to in order to verify her facts and that her concerns about the company were legitimate.\textsuperscript{312} Ms. Watkins wrote the memo anonymously, on August 15, 2001, because she feared repercussions from raising the issues.\textsuperscript{313} However, by August 22, and after discussing the memo with former colleagues at Andersen, she told her bosses that she was the one who wrote the memo.\textsuperscript{314}

\bibitem{313} The company indicated he had taken early retirement to spend more time with his family. However, Mr. Baxter was found dead in his 2001 Mercedes of a self-inflicted gun wound to the head at an area just a few miles from his suburban Houston home. Jim Yardley, Enron's Many Strands: An Executive's Death; Critic Who Quit Top Enron Post Is Found Dead, N.Y. Times, Jan. 26, 2002, at A1.
\bibitem{314} What Did They Know and... When Did They Know It?, supra note 303, at 16.
\bibitem{315} Ms. Watkins had obtained a briefing from Rick Buy, Enron's Chief Risk Officer. Enron's Watkins Describes “Arrogant” Culture, supra note 303. And isn't Buy a great last name for a risk officer? She focused on the Raptor partnerships and wrote in the margins next to her description of the Raptors, "There it is! That is the smoking gun. You cannot do this! My understanding as an accountant is that a company can never use its own stock to generate a gain or avoid a loss on its income statement." Id. At her Congressional testimony, Ms. Watkins indicated that she believed Mr. Lay really did not understand clearly the problems with the Rapters and the other accounting issues. After Vinson & Elkins, the law firm for Enron, conducted its investigation into the allegations it concluded, "[b]ased on the findings and conclusions set forth with respect to each of the four areas of primary concern discussed above,

http://scholarlycommons.law.cwsl.edu/cwlr/vol39/iss2/2
Watkins testified before Congress that she did not turn to Mr. Skilling or Mr. Fastow because she said, "[i]t would have been a job-terminating move."315 Other employees within the company were also trying to alert management and others to pending problems. For example, Margaret Ceconi, an employee with Enron Energy Services, wrote a five-page memo to Kenneth Lay on August 28, 2001, stating that losses from Enron Energy Services were being moved to another sector in Enron in order to make the Energy Service arm look profitable.316 One line from her memo read, "[s]ome would say the house of cards are falling."317 Mr. Lay did not meet with Ms. Ceconi, but she was contacted by Enron Human Resources and counseled on employee morale.318 When she raised the accounting issues in her meeting with HR managers, she was told they would be investigated and taken very seriously, but she was never contacted by anyone about her memo.319 Her memo remained dormant until January 2002, when she sent it to the U.S. House of Representatives’ Energy and Commerce Committee,320 the body conducting a series of hearings on the Enron collapse.

Even after Enron’s travails began to trickle out to the public, employees remained in a culture of intimidation and fear. Clayton Vernon was fired after he posted a question on company internal online discussion that was directed at Mr. Lay and asked whether Enron had used aggressive accounting to overstate its profits.321 Another employee was fired for questioning the payment of $55 million in retention bonuses paid to officers in early December 2001.322 Both employees were fired for postings that were deemed “offensive.”323

the facts disclosed through our preliminary investigation do not, in our judgment, warrant a further widespread investigation by independent counsel and auditors." The report by the law firm was issued in the fall of 2001. Peter Behr & April Witt, Concerns Grow Amid Conflicts: Officials Seek to Limit Probe, Fallout of Deals, WASH. POST, July 30, 2002 at A1.

315. Enron’s Watkins Describes “Arrogant” Culture, supra note 303. While there was no evidence beyond her testimony, Ms. Watkins indicated that once Mr. Fastow heard of her memo, he wanted her fired and her computer seized. Id. However, additional documents do reveal that Fastow felt that the criticisms in the memo were an attempt by Watkins to get his job. Rebecca Smith, Fastow Memo Defends Enron Partnerships and Sees Criticism as Ploy to Get His Job, WALL ST. J., Feb. 20, 2002, at A3. Mr. Fastow was not a friendly sort. On his desk was a cube with the company’s values, one of which was communication. Inscribed beneath the “communication” value was the following: “[w]hen Enron says it’s going to ‘rip your face off,’ it will ‘rip your face off.”’ Raghavan, Full Speed Ahead: How Enron Odd Bosses Created a Culture of Pushing Limits, supra note 305.

In addition to the other cultural factors at Enron, there was an underlying cultural profile that perhaps contributed to those factors. The senior officer group of Enron was a collection of well-trained MBAs, given the hyper-technical tools typical of financial education in MBA programs in the 1980s. The credentials for the Enron executive team were as follows: Jeffrey K. Skilling, the former CEO of Enron, held an MBA from Harvard; Andrew Fastow, the former CFO, held a Northwestern MBA; Clifford Baxter, a former vice chairman, who killed himself shortly after the Enron revelations became a daily media event, was a Columbia MBA.

The MBA curriculum since the 1980s has focused on financial models designed to smooth earnings and produce double-digit returns for interminable stretches, things history tells us are not possible. The mandates of the curriculum contain no specific references to issues such as honesty, disclosure and fairness. To the extent ethics is a part of the curriculum it is considered to be social responsibility and a focus on issues such as environmental, health and safety issues and corporate philanthropy. Msrs. Skilling, Fastow, and Baxter emerged as well trained in financial models from MBA programs and equally well trained in terms of social responsibility, particularly with regard to their roles in the philanthropic community. All had extensive presence in the Houston community with regard to philanthropic activities.

flagrant violation of company policy to do what I did. I'm not going to litigate it. I don't think it was unfair." He indicated that the cancellation of the company Christmas party, coupled with the loss of value in his stock and the lack of any work to do at the office were the contributing factors for his messages and use of vulgarity therein. Id.

324. The author understands that she runs the risk of sounding a bit Harry Potterish here, but she is referring to financial wizardry and pride, not non-muggles and Hogwarts. See generally, HARRY POTTER AND THE SORCERER'S STONE (Warner Bros. 2000).

325. Darth Vader. Machiavelli. Skilling Set Intense Pace, supra note 16.

326. The Financial Wizard Tied to Enron's Fall, supra note 83. Mr. Fastow graduated from Tufts University and then the Kellogg School of Management of Northwestern University. Id. He began his work at Enron at age 29 and quickly rose through the ranks to become the CFO at age 36; although he functioned as second in command from the time he was 31. David Ivanovich, Center of the Storm: Aggressive, Driven, Fastow has Many Faces, HOUS. CHRON., Jan. 20, 2002 at A1. After being fired, Mr. Fastow and his wife, an heiress, continued to build their 11,500-square foot home and his friends say that the amount of money someone made was his only measure of a person's worth and success. The Financial Wizard Tied to Enron's Fall, supra note 83.

327. Jim Yardley & Shelia K. Dewan, Enron's Many Strands: The Suicide; Despite His Qualms, Scandal Engulfed Executive, N.Y. TIMES, Jan. 27, 2003, at Mr. Baxter's undergraduate degree was from NYU and his MBA was from Columbia. Id.

328. See infra notes 335-344 and accompanying discussion for more information on business school curricula.

329. For example, in 2000, Enron raised $525,000 in a Houston bike race to raise money for Multiple Sclerosis research and sponsored a race to raise money for the Holocaust Museum, Houston. ENRON CORPORATE RESPONSIBILITY ANNUAL REPORT 26 (2000), available at http://www.enron.com/corp/pressroom/responsibility/CRANNUAL.pdf. The report also highlights Enron's employee giving and matching gift programs. Id. at 26-27.
Mr. Fastow, for example, was prominent in Houston's Jewish community, active in the art museum, and had been a voracious fundraiser for the city's Holocaust museum. One friend who knew Mr. Fastow personally for years and worked with him on community projects said, "[t]he person I know bears absolutely no relation to the person who has been characterized in some reports within the walls of Enron." Mr. Baxter was involved in Junior Achievement, a friend said ironically, to help make sure that young people "understood the values of the free enterprise system." Enron paralleled FINOVA, American Continental Corporation (Charles Keating) and now WorldCom with regard to philanthropic activity. All of these companies had officers heavily involved in community and philanthropic activity, yet all of these companies imploded from accounting improprieties. In their minds, and based on their training it was quite easy for them to conclude, as Jeffrey Skilling did that, "we are on the side of angels."

The following paraphrased excerpt from an analysis by Across the Board, the magazine of the Conference Board, provides a view of the MBA curriculum:

4. The Curriculum as Mandated by the AACSB

The American Assembly of Collegiate Schools of Business (AACSB) is the national accrediting body for business schools. In an attempt to escape the academic stigma of being the least scholarly units on campus, business schools created an accrediting body to dictate courses, content and rigor.

The AACSB has been an active regulatory body for colleges of business. It has also managed to change the atmosphere and philosophy of business schools in the process. When one thinks of business school curriculum, one thinks of accounting, marketing, management, finance and business law. But the AACSB guidelines set a rain forest tone with the preamble to the guidelines offering the following as the four significant challenges businesses face:

- Strong and growing economic global forces
- Conflicting values
- Changing technology in products and processes; and
- Demographic diversity among the employees and customers

---

330. The Financial Wizard Tied to Enron's Fall, supra note 83.
331. Id.
332. The Suicide; Despite His Qualms, Scandal Engulfed Executive, supra note 327.
333. See supra notes 331-32 and accompanying text.
334. Enron Buffed Image to a Shine Even as It Rotted From Within, supra note 83. Mr. Skilling's full quote was, "[w]e are the good guys. We are on the side of angels." Id.
The preamble goes on to add, "In this environment, management education must prepare students to contribute to their organizations and the larger society and to grow personally and professionally through their careers."

There is a slight subversiveness to that simple preamble and the stated goals for business education. Those goals represent a philosophy that businesses exist to serve larger society. While all good Adam Smith apostles understand that economic self-interest does, indeed, benefit society, the issue of whether such a goal supercedes responsibility to shareholders is a topic of debate. Milton Friedman has questioned this premise of businesses serving society since 1970 and there are those of us who adhere to his theory that no one is well served if businesses fail to concentrate on business, not social goals.

Even the description of an appropriate curriculum reflects a newfound focus:

- Ethical and global issues
- The influences of political, social, legal and regulatory, environmental and technological issues; and
- The impact of demographic diversity on organizations

If it sounds a bit like the school of sociology, it is perhaps because there has been so much influence by social scientists. Management departments hire from schools of psychology and increasingly those from other areas of the campus are hired for business faculty positions because although those from around the campus may be anti-business, they are not anti-maximizers and they know where the highest salaries abound. At a recent meeting of the Society for Business Ethics, one of the professors lamented, "Let's face it. We are all in colleges of business because we wanted more money. We sold out years ago."

Only as a subset of these listed content areas do the guidelines mention the topics of accounting, behavioral science, economics, mathematics and statistics. Only at the MBA level are the topics of financial reporting, market analysis and human behavior in organizations mentioned. . . . The lack of practical skills for business or even business history and operations is striking. One finance syllabus described the goal of the course as follows: "In microeconomics we rely heavily on optimization—specifically: maximizing utility subject to a production possibilities frontier an subject to budget constraint." 336

The MBA curriculum is a sterile curriculum with an emphasis on financial models and doing well through volunteer work. However, there is a disconnect in the curriculum between the financial skills and ethics and in understanding that social contributions are not a substitute for candor in financial reports and honesty in company transactions. Enron is not unique in its structure or the attitudes or standards of its MBA officers. For exam-

336. Id.
pie, WorldCom's CFO, Scott Sullivan, is not an MBA, but a business school graduate with a penchant for the deal that piloted a multinational corporation into new waters with regard to financial reporting. Following WorldCom's phenomenal earnings restatement that staggered even an Enron-jaded Wall Street, Mr. Sullivan along with WorldCom's controller, David Myers were charged with securities fraud, conspiracy to commit securities fraud, and making false filing with the SEC.

The MBA curriculum that produced these Enron executives and many other ticking bombs out there carries a certain disdain for traditional business principles of low cost, quality, service and real profits. It is a curriculum that convinces its charges that they are better, smarter, and above the proletarian notion of reporting debt and expenses. Managing earnings is taught as a means of delivering shareholder value.

The notion of spinning debt off the balance sheets is neither new nor unique to Enron. Most MBAs will study the Harvard Business School case on Marriott Corporation in which Marriott split itself into two pieces, spinning off its debt and bondholders into one corporation, with a resulting

339. Simon Romero & Alex Berenson, WorldCom Says it Hid Expenses, Inflating Cash Flow $3.8 Billion, N.Y. TIMES, June 26, 2002, at A1; Kevin Maney & Jon Swartz, "A Stellar Reputation" Shattered, USA TODAY, Aug. 1, 2002, at 1B. Interestingly, Mr. Sullivan not only served as CFO, he was on the Board and served as secretary of the corporation. A bit of a recipe for disaster with one person having that much executive and Board control. WORLDCOM, INC., 2001 ANNUAL REPORT 77-78 (2002), http://www.worldcom.com/global/investor_relations/annual_reports/2001/2001annual.pdf (last visited Nov. 19, 2002); WORLDCOM, INC., 2000 ANNUAL REPORT 145 (2000), http://www.worldcom.com/global/investor_relations/annual_reports/2000/2000annual_report+proxy.pdf(last visited Nov. 19, 2002); WORLDCOM, INC., 1999 ANNUAL REPORT 65 (2000), http://www.worldcom.com/global/investor_relations/annual_reports/1999/1999_wcom_annual.pdf (last visited Nov. 19, 2002). The two were also indicted along with Buford Yates, the former director of general accounting at WorldCom. At the time the indictments were announced, the Justice Department also announced the cooperation of Betty Vinson, an accounting employee who made the changes on the expenses, and Troy Normand, a former accounting employee who gave directions to property accounting to make the changes related to the capital expenses. Mr. Yates was charged with the same charges as Mr. Sullivan. Mr. Myers is said to be cooperating with investigators and expected to enter a guilty plea. All four are business school graduates. U.S., Pushing WorldCom Case, Indicts Ex-CFO and his Aide, supra note 338.

340. Charles A. Nichols, III & Lynn Sharp Paine, MARRIOTT CORPORATION (A), 9-394-085 (Harvard Business School 1997) (1993). Professors James Stearns of Miami University and Shaheen Borna of Ball State University interviewed 300 incarcerated inmates at three minimum security prisons and compared their responses with those of students at 11 MBA programs. The inmates showed just as much integrity, or more, when presented with ethical dilemmas. Inmates were more concerned about customer service while MBAs were more concerned about pleasing shareholders. Inmates were also less likely to pirate employees from other companies than the MBAs. Study available from THE CHRONICLE OF HIGHER EDUCATION, Feb. 9, 1999 at www.chronicle.com.
The executives landed safely in the other corporation with its boosted stock price because, well, it had no debt. They endured some squawking and litigation from bondholders, but lived to tell about it.

There are generally three reactions to the Marriott case among MBA students. Reaction one is, "What exactly is the ethical issue here?" Reaction two is: "So, they screwed the bondholders. It's the shareholders who count." Reaction three comes from the poor souls who raise the issues of reputation, fairness, and the long-term. If not hooted from the room, they are overpowered by those who assure them that these brilliant financial techniques are why they are earning an MBA.

This environment and the types of executives in Enron run parallel to other organizations that have met similar fates in an implosion sense. Charles Keating was surrounded by an executive team a full generation younger, with some of the executives being Keating's sons or sons-in-law. FINOVA and WorldCom also had their youthful MBA profiles at the top of the company. While it is impossible to know cause and effect on these acts of earnings manipulation, management and fraud, it is clear that the presence of MBAs at the top of an organization does not provide any checks and balances for bringing a halt to the "aggressive accounting."

The problem may be much more insidious. Again, as noted in the Conference Board review of business school curricula:

There is a feeling among these students that they have sold their souls by going into business. So indoctrinated are they upon arriving from their undergraduate programs that they are convinced that they have chosen a path of wrongdoing by even being associated with business. Some will be convinced otherwise during the course of the semester, but many will not and they become a particularly dangerous combination. They combine their having sold their soul theory with an odd sort of nihilism and the result is an ethically toxic group headed out into business.

Worse, the notions from the rest of the campus on moral relativism and there being no absolute truth have invaded business ethics discussions as well as courses in management and marketing. The prevailing ethical theory of stakeholderism is not an ethical theory at all but a convenient tool of analysis that permits the justification and rationalization of any business decision so long as the business is acting in the best interest of some stakeholder group. Teaching a value system with shifting accountability could not be more subversive. These students are sent out with theories that teach them that the shareholder is but one group to whom they are accountable. They must use their power in business to improve communities, make charitable contributions, change public policy and advance civi-

341. The author has been harping on earnings management since 1996. See generally Marianne M. Jennings, The Slippery Slope From "Hold to Pay in 45 Days" to Phantom Inventory, 1 CORPORATE FINANCE REV. 39 (1996); Marianne M. Jennings, Earnings Management: The Ethical Issues Remain, 3 CORPORATE FIN. REV. 39 (1999).
lization. The goals are lofty. It's just that corporations are perhaps not equipped to do all of that and meet quarterly sales goals.\textsuperscript{342}

A recent study demonstrates the impact of the MBA on judgment. Seventy-five percent of MBAs said the primary role of a company is maximizing shareholder value, 71% said satisfying customers was the goal of a business and only 33% said producing a quality product was the goal of a company. Those numbers differ prior to business school as 68%, 75% and 43% respectively demonstrating that there is some change brought about by business school training.\textsuperscript{343}

Without definitive rules, the judgment to spin the debt of Enron off the books was quite an easy one to justify because the end result was, that at least for time, shareholders were pleased, employees were treated well, Houston and other communities benefited from Enron's generosity and a general feeling of euphoria overcame the officers as they realized their complex financial models were ideal for serving stakeholders.\textsuperscript{344}

IV. PREVENTION OF ANOTHER ENRON: TOOLS FOR COMPANIES TO USE TO HALT ETHICAL IMPLSION AND RESOLVE THE CRISIS OF CONFIDENCE

The prevention tools and fixes are self-evident because of the detailed discussion of what happened at Enron. Despite the inherent obvious corrections that might have prevented the perfect storm at Enron, the reforms to date are neither well thought out nor directed at the root causes. This section reviews the reforms established presently at both the public and private levels and then provides suggestions for voluntary actions on the part of businesses that would be more effective in addressing the gaps and the failures in checks and balances that led to the Enron perfect storm.

A. The Reforms

Perhaps the easiest reform proposal to cover is that of the Wall Street Journal and other free-market disciples who believe that the decline in the market is not due to a loss of trust, Enron or any other scandal, and that the market is capable of adjusting without any type of regulatory reform. Leave them alone and they will take care of things themselves. To some extent there is some merit in their approach, for this is the third great reform effort of one score and two years. There were the prison terms and reforms following Ivan Boesky and Michael Milken's insider trading and "junk" bond fi-

\textsuperscript{342} Jennings, \textit{supra} note 335, at 39; see also Marianne M. Jennings, \textit{What's Happening in Business Schools?}, 137 THE PUB. INT. 25 (1999).

\textsuperscript{343} Mica Schneider, \textit{How An MBA Can Bend Your Mind}, BUS. WK., Apr. 1, 2002, at 12.

nancing on Wall Street.\textsuperscript{345} Then there were the prison terms and reforms following the savings and loans crisis and Charles Keating.\textsuperscript{346} Presently there are similar cries for prison terms, greater penalties, and reforms from the Enron and WorldCom debacles.

However, the resistance from the business community to any type of change or reform is not helpful in the restoration of trust. Several of the opinion pieces on Enron are of the type that induce flinching in their callousness toward the scope of the problem.\textsuperscript{347} On the day following WorldCom’s declaration of bankruptcy, rumor had to be the largest bankruptcy in the history of the United States, depending of course, on the testimony of three former accounting department employees at WorldCom who have been singing like canaries, Ben Stein wrote in the \textit{Wall Street Journal} of the need for recognizing how good and honest the vast majority of businesses and CEOs are.\textsuperscript{348} Mr. Stein may be absolutely correct, but perception is everything, and the failure to recognize the need for change and take steps in that direction is not helpful for restoring public trust. A look at the year in review gives an indication of how pervasive the issues related to ethics in business are.

\begin{itemize}
\item \textsuperscript{345} Janet Novack, \textit{Almost Makes Boesky a Saint}, \textit{FORBES}, Dec. 10, 2001, at 54; Gary Strauss, \textit{How Did Business Get so Darn Dirty?}, \textit{USA TODAY}, June 12, 2002, at IB.
\item \textsuperscript{347} For example, The \textit{Wall Street Journal} has had pieces entitled, “What Enron Did Right,” “Enron May be Dead but the New Economy Isn’t,” and “Enron: A Wake-Up Call,” a piece by Andersen’s CEO that seems to be a justification for its conduct and not seeing it coming. Samuel Bodily & Robert Bruner, \textit{What Enron Did Right}, \textit{WALL ST. J.}, Nov. 19, 2001, at A20; Joe Berardino, \textit{Enron: A Wake-Up Call}, \textit{WALL ST. J.}, Dec. 4, 2001, at A18; Don Tapscott, \textit{Enron May be Dead but the New Economy Isn’t}, \textit{WALL ST. J.}, Dec. 3, 2001, at A18. And then there are those who accuse New York Attorney General, Eliot Spitzer, of caring only about politics in finding out that analysts were lying to their companies’ clients. Rob Norton, \textit{The Problem with Eliot Spitzer}, \textit{FORTUNE}, July 8, 2002, at 44. I daresay that the problem does not lie with Mr. Spitzer. If he makes a little political hay, more power to him. He was the only public official in the country willing to say aloud what analysts were really doing. Bully!
\item \textsuperscript{348} Ben Stein, \textit{They’re Not All Crooks}, \textit{WALL ST. J.}, July 22, 2002, at A14. One phrase that was particularly irritating is, “I keep thinking that if we subjected journalists or actors or producers to the temptations we offer to CEOs, with as little supervision as they get, how many of us would be able to keep our paws out of the cookie jar as well as most CEOs.” And the point is that we can’t blame them because they had the opportunity to steal??? With this type of editorial in the \textit{Wall Street Journal}, there appears to be little hope for the self-reform and control needed. Indeed, Thomas E. White, the secretary of the Army, and formerly the vice chairman of Enron Energy Services, is a millionaire many times over because of his service at the company and seventy-seven calls from government phones to former Enron colleagues. While he said he was “ashamed” of Enron accounting practices, he assured Congress in testifying that he knew nothing and would retain his earnings from his shares and work there. James Dao, \textit{Senators Question Credibility of Army Secretary on Enron}, \textit{N.Y. TIMES}, July 19, 2002, at A13.
\end{itemize}
The following chart is adapted from a piece in *Corporate Finance Review*.

### THE LAPSES OF THE 2001-2002

349. Marianne M. Jennings, *Why Regulation Won’t Fix the Problems Plaguing Corporations: Moral Clarity as a Resolution*, 7 CORP. FIN. REV. 39 (2002). The chart does not include coverage of Merrill Lynch despite issues there because reforms there are somewhat different from the reforms of an Enron perfect storm and these other companies with financial reporting issues.

354. Andrew Ross Sorkin, *Founder of Adelphia and 2 Sons Arrested*, N.Y. TIMES, July 25, 2002, at C1. Because we are relying on government numbers here, the claim “largest corporate fraud case ever” could be right. Count on the Rigas family to use the defense, “It wasn’t $1 billion because, remember, we were cooking the books and what we embezzled was not near what the government alleges because those earnings were always unrealized, pro forma, marked-to-market and all manner of Ebitda.”

Enron; Global Crossing; Dynegy; WorldCom; Qwest

felony count of obstruction of justice in Enron matter for destruction of documents 356

Dynegy

Accounting issues surrounding: Project Alpha which reduced taxes and inflated cash flow; adequacy of disclosures; 357 questionable partnerships; 358 issues on “round-trip” trading of energy 359

CFO replaced; 360 has halted online energy trading, citing poor credit; 361 CEO quit when subpoenas from federal government regarding energy trading was announced 362

Enron

Earnings overstated through mark-to-market accounting. Off-the-book/special purpose entities carried significant amounts of Enron debt not reflected in the financial statements. Significant off-shore SPEs (770 of 881 SPEs were offshore – primarily in Cayman Islands)

Company is in bankruptcy (touted as the largest bankruptcy in the history of the US). Shareholder litigation is pending. Congressional hearings held. Justice Department and U.S. Attorney offices handling criminal investigations. One guilty plea from Michael Kopper’s on money laundering and wire fraud.

Andrew Fastow, former Enron CFO

Multimillion dollar earnings from serving as principle in SPEs of Enron created to keep debts off the company books; significant sales

Resigned as CFO. Multi-million dollar home under construction in Houston. Appeared before Congress and pled the Fifth

362. Noelle Knox, Dynegy CEO Quits Amid Scrutiny, USA TODAY, May 29, 2002, at 1B.
A PRIMER ON ENRON

of shares in the time frame preceding company collapse. Amendment. Indicted by federal government. 363

Kenneth Lay, former Enron chairman

Significant sales of shares in time frame preceding Enron collapse; warning memo from one financial executive about possible implosion of company due to accounting improprieties. Resigned as CEO. Appeared before Congress and pled the Fifth Amendment.

Jeffrey Skilling, former Enron CEO.

Resigned just prior to company’s collapse. Testified before Congress; offered assurances that he did not understand what was happening at Enron and that he resigned when he became aware.

Global Crossing

Deals with CEO’s son’s companies; 364 accounting questions surrounding booking of revenues (Andersen was auditor); 365 also questions on booking of long-term leases. 366 Filed for bankruptcy; 367 fourth largest bankruptcy in U.S. history. 368 Investigation of related party transactions and sales of shares by officers and an investigation into analysts’ role by NY Attorney General. 369

363. Mr. Fastow faces 78 felony charges. One of his direct reports, Lawrence M. Lawyer entered a guilty plea and has agreed to provide information to prosecutors on Mr. Fastow’s activities at Enron. Kurt Eichenwald, Ex-Executive of Enron Enters A Plea of Guilty, N.Y. TIMES, Nov. 27, 2002, C1.

Inextricably intertwined in the Global Crossing collapse and the WorldCom investigation, because of the business interrelationships, is Qwest, another telecommunications giant. The author predicts that its revelations on accounting are forthcoming.

\textsuperscript{394} Simon Romero & Riva D. Atlas, \textit{WorldCom Files for Bankruptcy; Largest U.S. Case}, N.Y. Times, July 22, 2002, at A1. And as noted, Mr. Sullivan, Mr. Myers and others have now been indicted for securities fraud. \textit{See supra} note 339.

\textsuperscript{396} Alex Pham, \textit{Xerox Adds to Scandals with Huge Restatement}, L.A. Times, June 29, 2002, at B1.

\textsuperscript{399} Harvey L. Pitt, \textit{Auditing Reform Can’t Wait for Congress to Act}, Wall St. J., June 19, 2002, at A18. The problem with this recommendation is that the SEC has not been particularly zealous in its oversight role. In 1992, the SEC’s chief accountant indicated that the peer review process in accounting was ineffective leading to the staff studying ways to improve oversight of the profession. However, the staff work was halted and a report on flaws in accounting practices and oversights was put on hold when Harvey Pitt became chairman of the SEC. Jonathan Weil & Scot J. Paltrow, \textit{Peer Pressure: SEC Saw Accounting Flaw}, Wall St. J., Jan. 29, 2002, at C1.
The following were the suggestions that surfaced through various sources as each of the above business stories has emerged and evolved:

- The Harvey Pitt plan of private regulation goes through a Board called the Public Accountability Board (PAB), which will be dominated by members of the public, not accountants, with independent funding, SEC oversight, the responsibility for setting audit standards and the authority to discipline;\(^\text{400}\)

- The Robert A.G. Monks plan of institutional investors taking charge in corporations and seeing to it that through shareholder activism the books and records of the corporation are accurate;\(^\text{401}\)

- Changes in accounting rules that were used and abused by the companies now in financial trouble;\(^\text{402}\)

- Eliminate the conflicts of interest by prohibiting auditors from also being consultants and brokers and analysts and from touting stocks while having an interest in the company or using the touting to obtain business or giving potential customers preferences on IPOs;\(^\text{403}\)

- More independence on Boards, especially on audit and compensation committees;\(^\text{404}\)

\(^{400}\) See Marc Gunther, *Investors of the World, Unite!*, FORTUNE, June 24, 2002, at 78. To some extent, some investors are doing so. New York and North Carolina’s pension plans have told Wall Street firms that they will do business only with firms that reduce conflicts of interest. Charles Gasparino, *Two Big States Tell Wall Street: Reform, or Else!*, WALL ST. J., June 7, 2002, at C1.

\(^{401}\) Cassel Bryan-Low & Ken Brown, *And Now, the Question is: Where’s the Next Enron? Accounting Textbooks will Get Rewritten, but Few Practices in the Industry Might Change*, WALL ST. J., June 18, 2002, at C1. One suggestion includes requiring companies to fill their pro forma numbers with their GAAP numbers so that investors could see the side-by-side comparison. Dirty Rotten Numbers, supra note 256, at 78 (taking idea from Jack Ciesielski, publisher of Analyst’s Accounting Observer).

\(^{402}\) Watchdogs and Lapdogs, supra note 250. NASD has announced investigation into the activities of Salomon Smith Barney’s research analyst, Jack Grubman, for his touting of Winstar, a Salomon investment bank client, knowing that the firm was experiencing deep financial difficulties. Charles Gasparino, *NASDAQ Prepares Action Against a Star Analyst*, WALL ST. J., July 22, 2002, at A1.

\(^{403}\) Adam Shell, *NYSE Calls for More Independence on Boards*, USA TODAY, June 7, 2002, at 1B.

\(^{404}\) Id.; see also Judith Burns, *SEC Seeks Improvement In Reports*, WALL ST. J., June 13, 2002, at C13. Effective July 1, 2002, the SEC requires CEOs and CFOs to sign under oath the financial statements of the company. Id. The immediacy of the new requirement was achieved by making the change through an SEC order that was deemed necessary as part of an ongoing staff investigation into the accuracy and transparency of corporate financial reports. The order applies to companies with $1.2 billion or more in assets and thus affects 947 companies. PBS, *Taking the Oath: Companies Subject to SEC Order 4-460*, WALL ST. WK., http://www.pbs.org/wsw/news/certifying companies.html (last visited Jan. 16, 2003).
- Make CEOs sign off on financial statements, which the SEC adopted and which has President Bush’s support; 405
- Allow shareholders to vote on all stock compensation programs; 406
- More rules on stock options; 407
- Increased penalties for violations of securities laws, including false financial statements; 408

SEC Order #4-460 provides:
The officers are required to file their written statements with the Commission no later than the close of business on the first day that their company is required to file a Form 10-K or Form 10-Q with the Commission on or after Aug. 14, 2002. The certifications are available to the public on the SEC website.
The certifications apply to the following financial reports:
  - the company’s most recent Annual Report on Form 10-K filed with the Commission;
  - all of the company’s reports on Form 10-Q, all reports on Form 8-K and all definitive proxy materials filed with the Commission subsequent to the filing of the most recent Form 10-K; and
  - any amendments to any of the above.
The attestation language under the Order is:
(1) To the best of my knowledge, based upon a review of the covered reports of [company name], and, except as corrected or supplemented in a subsequent covered report:
  - no covered report contained an untrue statement of a material fact as of the end of the period covered by such report (or in the case of a report on Form 8-K or definitive proxy materials, as of the date on which it was filed); and
  - no covered report omitted to state a material fact necessary to make the statements in the covered report, in light of the circumstances under which they were made, not misleading as of the end of the period covered by such report (or in the case of a report on Form 8-K or definitive proxy materials, as of the date on which it was filed).
(2) I [have/have not] reviewed the contents of this statement with [the Company’s audit committee] [in the absence of an audit committee, the independent members of the Company’s Board of directors].

407. Stephanie Strom, S.E.C. Widens Rule Covering Stock Options, N.Y. TIMES, Dec. 20, 2001, at C1. President Bush has asked for CEOs to make voluntary and complete disclosures. “I challenge every CEO in America to describe in the company’s annual report, prominently and in plain English, details of his or her compensation package, including salary and bonus and benefits. And the CEO, in that report, should also explain why his or her compensation package is in the best interests of the company he serves.” The November Markets, WALL ST. J., July 10, 2002, at A14. Due to a “withering lobbying campaign,” the proposals for reforms on stock option accounting have fallen flat. Jim Drinkard & Kathy Kiely, Stock-Option Rule Change Blocked, USA TODAY, July 12, 2002, at 1A.
408. Known as the Sarbanes legislation because of its drafter, Senator Paul S. Sarbanes, a Maryland Democrat. The Senate version of additional penalties increases prison sentences to
The Goldman Sachs proposal of requiring CEOs to hold stock in their companies for certain extended periods and return any gains made on sales of shares within one year of bankruptcy; and
Longer tenure for CEOs so that they are not as tempted to produce quarterly results at any cost.

B. A Critique of Sarbanes-Oxley and the Other Proposals for Reform

The problem, generically, with all the proposals is that they are technical rules in response to buses of other technical rules by corporate officers. Additional signatures, additional jail sentences, additional oversight Boards, and additional rules for Boards are the types of changes that seem logical, punitive and satisfying for an investor class hungry for the restoration of

---

...
trust. However, these mob solutions born of outrage often have unintended consequences. For example, in response to shareholder outcry over excessive CEO compensation, Congress passed reforms that limited the tax deductibility of compensation to executives to $1,000,000.\textsuperscript{411} Companies avoided the regulation by traipsing down the path of stock options, an issue that is an issue in financial transparency today because options are not booked as an expense and shareholders are often taken aback when they are exercised, particularly at the prices granted and in the volumes awarded. Proposed reforms can backfire and, in the case of these reforms, it is not clear that they address the root cause of the problems that gave rise to Enron's \textit{perfect storm}, a storm that has now found its way into the bellies of other companies.

3. The SEC Certification

One of the first changes in the law occurred through an expedited rule change on the part of the SEC. Under a new rule, the SEC mandated that the financial officers of 947 companies headquartered in the United States affix their signatures to the mandatory SEC certification for their financial reports.\textsuperscript{412} As the deadline approached, there was much posturing for there was the underlying assumption that the fear of certification would begin a flood of earnings restatements, delays and corrections. The August 14, 2002 deadline has come and gone and companies did not drop like flies. While there has been an increase in the number of earnings restatements over the past year, there was no flurry of last-minute activity regarding the certifications. As of August 23, 2002, the SEC announced that only 16 companies were not in compliance with the certified statements requirements.\textsuperscript{413} 

2. Sarbanes-Oxley\textsuperscript{414}

The key elements of this legislation are: (1) an accounting oversight Board;\textsuperscript{415} (2) regulations on the independence of auditors;\textsuperscript{416} (3) corporate
responsibility and governance issues including the structure of audit committees,\footnote{17} certification of financial statements\footnote{18}, forfeiture of bonuses and options,\footnote{19} codes of ethics for senior financial officers,\footnote{20} and professional responsibility rules for attorneys working with companies on certification of financial statements\footnote{21}; (4) analysts’ conflicts of interest\footnote{22}; and (5) increased criminal penalties for fraud in financial reporting.\footnote{23}

Everyone who proposed reforms got a little something in Sarbanes-Oxley.\footnote{24} Both the SEC rules changes on certification of financial statements by CEOs and CFOs and the Sarbanes-Oxley legislation are touted as major reforms. However, a closer examination of the legislation reveals that both the new SEC rules and the Congressional package change very little except the penalties for financial fraud and other white-collar crime. In fact, a list of the key provisions demonstrates the absence of meaningful change.

### SARBANES-OXLEY AND SEC CERTIFICATION REQUIREMENTS VS. STATUS QUO

qualitatively material if they reveal a creative and struggling management (in an accounting and viable entitle sense)\textsuperscript{426}

2. SEC certification of financial statements—Inasmuch as all reports (10-K; 8-K; 10-Q) must be filed with the SEC and require the signatures of the CEO and financial officer as well as those of the Board

\begin{Verbatim}
\textsuperscript{426} For example, the recent unraveling of the Sunbeam Corporation through both SEC charges and its restructuring, demonstrate how quantitatively immaterial financial information can carry significant qualitative materiality weight. Eventually, the SEC required Sunbeam to restate its income by reducing the $189 million report by what it referred to as $62 million in mythical income. One of the examples provided by the SEC related to the booking of contracts that were not firm, but were quantitatively immaterial. Sunbeam, Inc., as a maker of home appliances such as electric blankets, the Oster line of blenders, mixers, can openers and electric skillets, has a rather large inventory of parts it needs for the repair of these appliances when they are returned by customers while they are still under warranty. Sunbeam used a warehouse owned by EPI to store the parts, which were then shipped out as needed. Sunbeam proposed selling the parts to EPI for $11,000,000 and then booking an $8,000,000 profit. However, EPI’s appraisal of the parts came in at only $2,000,000. EPI and Sunbeam, therefore, just entered into an “agreement to agree.” EPI would agree to buy the parts for $11,000,000, Sunbeam would be able to book the contract as revenue of $11,000,000 and then EPI could simply back out of the deal after the first of the year when the financial statements were already completed. Sunbeam’s auditor, Arthur Andersen, approved of the booking of the agreement despite full information about the nature of the “agreement to agree” because the $11,000,000 was quantitatively immaterial. The Andersen partner, Philip Harlow, was, of course, perfectly correct in the application of the materiality standard. However, that booking of a sham $11,000,000 contract represents qualitative materiality that would provide investors and shareholders with substantial insight about management as well as the status of the company.

The SEC did charge Sunbeam with fraud in relation to the booking of these transactions. The SEC director of enforcement called the fraud accusations part of the SEC’s ongoing efforts to prevent “fraudulent earnings-management practices.” Mr. Harlow did hire another set of eyes and standards for Sunbeam. PricewaterhouseCoopers was hired to go over Sunbeam’s books. However, they simply concluded as Harlow did and the financial statements went forward with little accuracy, but great comfort on materiality and his judgment calls and those auditors agree that Mr. Harlow certified “materially accurate financial statements.” See generally, Why Regulation Won’t Fix the Problems Plaguing Corporations: Moral Clarity as a Resolution, supra note 349; Martha Brannigan, Sunbeam Audit to Repudiate ’97 Turnaround, WALL ST. J., Oct. 20, 1998, at A3; Michael Schroeder, Dunlap Settles Fraud Charges with the SEC, WALL ST. J., Sept. 5, 2002, at C1; Floyd Norris, Justice Dept. Starts Inquiry at Sunbeam, N.Y. TIMES, Sept. 9, 2002, at C1.

433. Id. § 301.
434. The SEC will define “financial expert,” but the statute instructs the SEC as follows:

In defining the term ‘financial expert’ for purposes of subsection (a), the Commission shall consider whether a person has, through education and experience as a public accountant or auditor or a principal financial officer, comptroller, or principal accounting officer of an issuer, or from a position involving the performance of similar functions—

(1) an understanding of generally accepted accounting principles and financial statements;

(2) experience in—

(A) the preparation or auditing of financial statements of generally comparable issuers; and

(B) the application of such principles in connection with the accounting for estimates, accruals, and reserves;

(3) experience with internal accounting controls; and

(4) an understanding of audit committee functions.

Id. § 407.
435. Id. § 304. Section 304 states:

If an issuer is required to prepare an accounting restatement due to the material
10. Sarbanes-Oxley
Sec. 306. Insider trades during pension fund blackout periods. Officers and directors cannot trade in stock during this black-out period any stock or interests acquired through company affiliation.

The law attempts to move officers, directors and other insiders to a standard of absolute accountability in which trading in the company’s shares becomes the exception, not the norm.

11. Sarbanes-Oxley
Sec. 307. Rules of

This rule already exists in both the language of professional responsibility as well as various interpretations of the issuer, as a result of misconduct, with any financial reporting requirement under the securities laws, the chief executive officer and chief financial officer of the issuer shall reimburse the issuer for—

(1) any bonus or other incentive-based or equity-based compensation received by that person from the issuer during the 12-month period following the first public issuance or filing with the Commission (whichever first occurs) of the financial document embodying such financial reporting requirement; and

(2) any profits realized from the sale of securities of the issuer during that 12-month period.

Id.

436. Id. § 306. Section 306 states:

Except to the extent otherwise provided by rule of the Commission pursuant to paragraph (3), it shall be unlawful for any director or executive officer of an issuer of any equity security (other than an exempted security), directly or indirectly, to purchase, sell, or otherwise acquire or transfer any equity security of the issuer (other than an exempted security) during any blackout period with respect to such equity security if such director or officer acquires such equity security in connection with his or her service or employment as a director or executive officer.

(2) Remedy:——

(A) In General.—Any profit realized by a director or executive officer referred to in paragraph (1) from any purchase, sale, or other acquisition or transfer in violation of this subsection shall inure to and be recoverable by the issuer, irrespective of any intention on the part of such director or executive officer in entering into the transaction.

\(^{441}\) A Code of Ethics is defined as follows:

In this section, the term "code of ethics" means such standards as are reasonably necessary to promote—

1. honest and ethical conduct, including the ethical handling of actual or apparent conflicts of interest between personal and professional relationships;  
2. full, fair, accurate, timely, and understandable disclosure in the periodic reports required to be filed by the issuer; and  
3. compliance with applicable governmental rules and regulations.

\(^{442}\) 80% of all publicly-traded companies have a Code of Ethics; 55% provide training for their employees; and 30% say they have a hotline for reporting concerns. Ethics Resource Center 2000 Survey, www.ethics.org at Ethics Today Newsletter archives. The reader may recall that Enron had a fabulous Code of Ethics. See supra note 216.
The legislation, in effect, codifies what were known to be the best practices of companies in terms of avoiding ethical collapse. Because of the new specifics in the statute, there are changes all companies will be required to make, even those firms following the best practices that already implemented the statutory changes. For those companies following best practices, the only significant issues they face with the enactment of this reform legislation is that their code of ethics must contain a provision that deals specifically with financial reporting. Companies will be required to add programs, training and distributions that establish for the SEC, as well as for use should it become necessary under the Federal Sentencing Guidelines, that all employees have been told and/or trained to understand the importance of full and fair disclosure in financial reports and the critical role of honesty in fi-
nancial reporting. To make the notion of “full and fair disclosure” clear to employees, and to satisfy the SEC, companies should develop and provide examples and training for employees that walk through the specific types of concerns regarding financial reporting. Generic training of employees discussing the simple proposition that financial reports must be complete and accurate will not suffice under the provisions of Sarbanes-Oxley. Companies must be able to demonstrate that employees understand that if they are asked to book expenses differently, spin debt off the company books, or even include overly optimistic figures in earnings, then they are in a situation that requires some form of internal reporting on their part.

Sarbanes-Oxley is also a two-by-four to the heads of management executive teams because of the strict penalties that are now imposed for securities crimes and all other financial types of crimes and fraud. The penalty for securities fraud has increased to twenty-five years. The White-Collar Crime Penalty Enhancement Act of 2002, enacted as part of the Sarbanes-Oxley bill, increases the penalties for mail and wire fraud from five to twenty years. Violations of ERISA now carry greater penalties with $5,000 fines for individuals increased to $100,000; one-year imprisonment increased to ten years; and company fines of $100,000 increased to $500,000. The new provisions for certification of financial reporting impose penalties of $1,000,000 and/or ten years and for willful violations, $5,000,000 and twenty years. Another statute that was part of the Sar-

444. Id. § 807. This section of the Act provides, in pertinent part:

Whoever knowingly executes, or attempts to execute, a scheme or artifice—

(1) [T]o defraud any person in connection with any security of an issuer with a class of securities registered under section 12 of the Securities Exchange Act of 1934 or that is required to file reports under section 15(d) of the Securities Exchange Act of 1934; or

(2) [T]o obtain, by means of false or fraudulent pretenses, representations, or promises, any money or property in connection with the purchase or sale of any security of an issuer with a class of securities registered under section 12 of the Securities Exchange Act of 1934 or that is required to file reports under section 15(d) of the Securities Exchange Act of 1934; shall be fined under this title, or imprisoned not more than 25 years, or both.

Id. (internal citations omitted).

446. Sarbanes-Oxley Act, supra note 408, § 903.

447. See id.; Id. § 904(1).

448. See id. § 904(2).

449. See id. § 904(3).

450. 18 U.S.C.A. § 1349 (West 2003) provides:

(c) Criminal Penalties.—Whoever—

(1) [C]ertifies any statement as set forth in subsections (a) and (b) of this section knowing that the periodic report accompanying the statement does not comport with all the requirements set forth in this section shall be fined not more than $1,000,000 or imprisoned not more than 10 years, or both; or
banes-Oxley Bill, the Corporate Fraud Accountability Act of 2002, imposes penalties for the concealment or destruction of documents related to the financial reports of a company.\textsuperscript{451} The penalty is a hefty twenty years and would have increased David Duncan’s, the Andersen audit partner for Enron, punishment from a mere obstruction charge to one of financial fraud.\textsuperscript{452}

Penalties under the Securities Exchange Act of 1934 are increased substantially.\textsuperscript{453} The existing $1,000,000, and/or ten years is increased to $5,000,000 and/or twenty years and Company penalties are increased from $2,500,000 to $25,000,000. CEOs also have exposure under the Internal Revenue Code provisions for they must also now sign the corporate tax returns.\textsuperscript{454}

The new legislation also makes the new stiffer fines largely inescapable because debts that arise as a result of financial fraud are now non-dischargeable in bankruptcy.\textsuperscript{455} There is no longer a bankruptcy loophole for officers of companies that have defrauded shareholders and are found guilty. Any orders of restitution continue until paid. Further, the Act makes it easier for litigation on securities fraud in that it increases the statute of limitations from 1 year from the time of discovery but no later than three years after the prospectus is issued to a two year/five year combination.\textsuperscript{456}

\footnotesize{(2) \textit{[W]illfully certifies any statement as set forth in subsections (a) and (b) of this section knowing that the periodic report accompanying the statement does not comport with all the requirements set forth in this section shall be fined not more than $5,000,000, or imprisoned not more than 20 years, or both.}}

\textit{Id.}; \textit{See Sarbanes-Oxley Act, supra note 408, § 906.}

\textbf{451.} 18 U.S.C.A. § 1512(c) (West 2003). The section states:

\begin{quote}
Whoever corruptly (1) alters, destroys, mutilates, or conceals a record, document, or other object, or attempts to do so, with the intent to impair the object’s integrity or availability for use in an official proceeding; or (2) otherwise obstructs, influences, or impedes any official proceeding, or attempts to do so, shall be fined under this title or imprisoned not more than 20 years, or both.
\end{quote}

\textit{Id.}

\textbf{452.} \textit{See id.} This provision would then be called the “David Duncan Law” because the penalty was so light for the auditor Congress proposed to nab everyone with a prison sentence that hurts they take it upon themselves to destroy evidence.\textsuperscript{.}

\textbf{454.} Sarbanes-Oxley Act, supra note 408, § 1001. “It is the sense of the Senate that the Federal income tax return of a corporation should be signed by the chief executive officer of such corporation.” \textit{Id.}

\textbf{455.} The Act adds this new non-dischargeable debt category to 11 U.S.C.A. § 523(a) as category (19). \textit{See id.} § 803.

\textbf{456.} \textit{See id.} § 804, amending 28 U.S.C.A. § 1658 to provide that securities fraud suits:

\begin{quote}
“(M)ay be brought not later than the earlier of—

(1) 2 years after the discovery of the facts constituting the violation; or

(2) 5 years after such violation.”
\end{quote}

More changes could be forthcoming, because the bill also mandates a plethora of studies to be conducted over the next few years with substantial funding from Congress, including studying the consolidation of public accounting firms, credit reporting agencies, and the Federal Sentencing Guidelines.\footnote{457} The Act also forms new oversight bodies with the audit profession, now governed by an Accounting Oversight Board.\footnote{458} Those analysts who were so terribly conflicted during the boom economy will now be required to disclose their conflicts of interest in terms of research reports and compensation structures with clients and customers.\footnote{459}

The key factor in Sarbanes-Oxley is for companies and their officers to understand that, for the most part, companies do not operate as Enron or WorldCom did. Sarbanes-Oxley is the codification of moral standards for businesses, while providing the teeth for ensuring that those morals are understood and followed.

Now that the reforms have arrived, there are many still struggling with new corporate requirements. The elimination of auditor conflicts, in that an auditor cannot serve as the company’s auditor while providing consulting services, is critical. However, the accounting industry has been resistant to

\footnote{457} Title VII of the Act provides the funding authorizations as well as the descriptions of the areas to be studied. Sarbanes-Oxley Act, supra note 408, §§ 701-705.

\footnote{458} Section 101 of the new legislation provides:

There is established the Public Company Accounting Oversight Board, to oversee the audit of public companies that are subject to the securities laws, and related matters, in order to protect the interests of investors and further the public interest in the preparation of informative, accurate, and independent audit reports for companies the securities of which are sold to, and held by and for, public investors. The Board shall be a body corporate, operate as a nonprofit corporation, and have succession until dissolved by an Act of Congress.

\textit{Id.} § 101.

\footnote{459} Sarbanes-Oxley amends 15 U.S.C. § 78a by adding Section 15D with provisions on protecting analysts from pressure through the following changes in analysts’ relationships with their employers:

\begin{enumerate}
  \item[(1)] (A) [R]estricting the prepublication clearance or approval of research reports by persons employed by the broker or dealer who are engaged in investment banking activities, or persons not directly responsible for investment research, other than legal or compliance staff;
  \item[(B)] [L]imiting the supervision and compensatory evaluation of securities analysts to officials employed by the broker or dealer who are not engaged in investment banking activities; and
  \item[(C)] [R]equiring that a broker or dealer and persons employed by a broker or dealer who are involved with investment banking activities may not, directly or indirectly, retaliate against or threaten to retaliate against any securities analyst employed by that broker or dealer or its affiliates as a result of an adverse, negative, or otherwise unfavorable research report that may adversely affect the present or prospective investment banking relationship of the broker or dealer with the issuer that is the subject of the research report.
\end{enumerate}

\textit{Id.} § 501.
such reforms and mandatory elimination of the conflicts may be required. The same is true of brokers and analysts with regard to their relationships and financial arrangements, both with clients, and in their compensation systems. There are two ways to eliminate a conflict of interest: “don’t do it” or “disclose it.” In the case of auditors, “don’t do it” is the only option because the inherent conflict is not eliminated by disclosure.

The perfect storm is a systemic crisis. Different from the rogue traders and the occasional corrupt corporate officer, these are crises in which the systems inside and outside the companies failed to provide the checks and balances. Fundamentally, the companies and the executives running them lied. Accounting rules, interpretations, and legal opinions meant that their actions were in compliance, the standard form of corporate ethics, overall, they understood that their share prices were not justified given their true internal financial picture. Still, they continued this public deception, all while making significant salaries and returns on their own options.

That people lie is hardly new to this era or business. What may be different is the personal interest in the diabolical activities, the challenge is

460. While serving as a consultant to Arthur Andersen, in the initial days following the Enron collapse, Paul Volcker recommended the elimination of these conflicts, as well. Seth Sutel, As Andersen Edges Toward Extinction, Volcker Team Trots Out Ways to Reform it, THE COM. APPEAL, Mar. 12, 2002, at B8.

461. At Enron, some have labeled the activities as being more serious than lying. Robert L. Bartley, editor of the Wall Street Journal has described the Enron conduct as follows, “So it would appear, at least at this stage of the events that the chief financial officer and a few partners were stealing from shareholders. Someone might even call it embezzlement, in the broad sense of theft of company assets by those with fiduciary obligations.” Robert L. Bartley, Thinking Things Over: Enron: First, Apply the Law, WALL ST. J., Feb. 11, 2002, at A23.

462. There are more accounting tools and tricks out there that companies can employ to keep debt off the books, thereby increasing their share value and risk while decreasing their cost of capital including “synthetic leases,” a means of getting back the now verboten tool of selling company headquarters and then leasing it back to avoid carrying the debt. Some of the companies with synthetic lease issues, disclosed and not disclosed to shareholders, are Krispy Kreme, Cisco, Lexicon Genetics, and Dollar General. Seth Lubove & Elizabeth MacDonald, Debt? Who, Me?: Enron is Hardly Alone When it Comes to Creative Off-Balance-Sheet Accounting, FORBES, Feb. 18, 2002, at 56.

463. The reaction of some portions of the business community to even just the SEC’s new requirement on certification (see earlier discussion in Part IV) is not encouraging in terms of meaningful reform. One lawyer advised his business clients to resist the change because he doubted the SEC’s authority to take these steps. See Paul Beckett, SEC Order Forces Executives to Swear by Their Numbers, WALL ST. J., July 5, 2002, at A1. And Scott Sullivan, CFO of WorldCom, Gary Winnick of Global Crossing, and Martha Stewart have all continued with multi-million dollar renovations or constructions of mansions, with Sullivan’s in Boca Raton because bankruptcy exemptions there for homes are unlimited. See Jon Swartz, Homes of the Rich and Infamous, USA TODAY, July 15, 2002, at 3B.

464. For example, Middle West Utilities collapsed in the years following the 1929 stock crash precisely because it too had an astounding amount of off-the-books debt accomplished through the use of interconnected companies and interlocking boards. Its structure was so complex that it took the Federal Trade Commission seven years to unravel its financial structure. When it did collapse, Samuel L. Insull, its CEO, was very much a Ken Lay, someone who had been generous with political donations and someone who quickly became a target for
finding the means for curbing the diabolical activities of educated, and experienced business people, and those who reported to them because they were able to perpetuate longstanding deception of a magnitude that continues to stun an already stunned investor class. Incentive plans, stock options, bonuses, the unforgiving demands of quarterly results that meet announced goals, and not one penny less, served as both temptations and rationalizations.

Still, the root cause is not solely these carrots, nor will the sticks of fines, criminal charges and imprisonment solve the systemic crisis. While there presently is a crisis in ethics in business, there is also a crisis in the perceived fundamentals of business. What Andrew Fastow and WorldCom's CFO, Scott Sullivan, and a host of executives at Xerox believed was that if they could just hang on and keep the earnings coming using various FASB stretches, their pro formas would become reality and they would reign as the wizards of finance and business.

The crises in ethics are partially a function of longstanding rationalizations justified by unrealistic finance theories and even investor expectations in returns from those applied theories. Such a crisis cannot occur without the acquiescence of investors who were all too willing to believe that these astronomical share prices and earnings were possible on a continuing and regular basis. Investors, because of the increased sophistication, will need to

vilification. He was tried for fraud and embezzlement, left the country as lawsuits from shareholders were litigated and died of a heart attack while waiting for a subway in Paris. He had only 85 cents in his pocket. Mr. Insull "went down with his ship," even as Enron executives continue to enjoy a millionaire's life. Middle West's collapse was responsible for the passage of the 1934 Securities Exchange Act (15 U.S.C. § 78), the Public Utility Holding Company Act, and the Federal Power Act, the last two of which were federal laws in which Enron found loopholes. Rebecca Smith, Enron's Rise and Fall Gives Some Scholars a Sense of Deja Vu, WALL ST. J., Feb. 4, 2002, at A1.

465. Incredibly, there seems to be little shame or remorse over Enron. For example, when Mr. Skilling left Enron to "spend more time with his 3 children," having "missed too many soccer games over the years," he engaged in a short sale on August 24, 2001 against an Enron competitor, AES. Estimates put the value of the sale, because AES shares did indeed decline, at between $15 and $30 million. Ken Brown, Enron Ex-CEO Made Sideline Bet vs. Rival, WALL ST. J., Jan. 14, 2002, at C1.

466. In a recent piece in Forbes magazine, the chairman of Hypercom commented that he was reluctant to fire the company's top salesman even though there were charges of sexual harassment, abuse and at least one settlement of a case brought against the company for the salesman's behavior, "He was bringing in $70 million a year. Do you fire your number one rock star because he's difficult?" Daniel Lyons, Bad Boys, FORBES, July 22, 2002, at 99, 102.

467. This position is supported by Federal Reserve Chairman, Alan Greenspan who stated in testimony before Congress that Congress could not "effectively legislate morality or character." Mr. Greenspan did acknowledge that additional criminal penalties for CEOs could "have profoundly important effects" on corporate behavior. George Hager, Fed Chief Expresses Guarded Optimism, USA TODAY, July 17, 2002, at A1.

468. And we must not forget "Ebitda" (Earnings before interest, taxes, depreciation and amortization), a figure that was worshipped by many as a true indicator of firm performance. It's just that taxes and interest are real expenses and as it turns out with WorldCom, they were faking the real expenses anyway. Martin Peers & Robin Sidel, Days May be Numbered for Ebitda Numbers, WALL ST. J., July 5, 2002, at C1.
be savvier. Fortunately, that investment savvy is guided by a simple and overarching principle: if it sounds too good to be true, it is too good to be true. Investors will need to examine not just earnings, but the quality of earnings. If companies are reporting significant revenues and revenue increases, investor should check earnings quality, by comparing revenues with cash flow. Even when Enron’s share price was still at $63 in May 2001, a simple look at its lack cash and mounting debt would have been a tip to a relatively unsophisticated investor that there was something significant behind the financial statements.469

The fundamentals of sound business are not difficult: the business makes a product or offers a service that customers want; they make the product or provide the service and keep costs down; they sell the product or service and they have earnings. Just a glance at the chart of misdeeds demonstrates that this fundamental along with very simplistic philosophies were ignored. Investors were duped because they dismissed the old adage, if it sounds too good to be true, it is too good to be true. These companies were operating in such a leveraged fashion that when a rainy day came, i.e., in Enron’s case, a downturn in the economy post September 11, they had no cushion (savings) for a rainy day. The booking of revenues in advance of when they were earned was a violation of the sage advice: Don’t count your chickens before they are hatched. There is so much of common sense that has been ignored in business operations and financial reporting that this crisis has caused the complexities of regulatory reform to consume the discussions without acknowledging that there are far deeper problems, than whether auditors have an independent Board supervising them.

The behaviors at Enron included lavish spending, and executives who used their company as a means of self-enrichment or even as a bank for loans with enormously favorable terms.470 Some of these companies were carrying inventory, as in the case of the telecoms with their capacity, so large that there could never be a market of buyers large enough to use all the capacity that they had. The wisdom, art, and science of doing business is lost among the wizardry that is the substitute.

The crisis in confidence among investors has left them with the conclusion that there is no need to invest in companies, when the government can provide a financial return on instruments with lower rates of return but, which have clear terms, and a transparency that gives them comfort.471 Man-

470. In some situations, the enormously favorable terms for the loans meant not having to pay it back, the nirvana of all possible loan terms. The loan to WorldCom’s Bernie Ebbers was $366 million and has not been collected as yet. Rebecca Blumenstein & Jared Sandberg, WorldCom CEO Quits Amid Probe of Firm’s Finances, WALL ST. J., Apr. 30, 2002, at A1.
471. Given the performance of the market over the past two years, investors have realized that there is only a tiny additional gain to be made by investing in the market as opposed to Treasury bonds. One calculation puts the difference between an investment of $100,000 in 1987 in Treasury bonds vs. a $100,000 investment in the market to be only $40,000 less "and the investor would have been spared much of the angst of the 1987, 1998 and current market
agers once used skills of strategy, quality, and sales to bring about the higher returns for investors. Now companies, in all industries, have become financial service organizations that investors have difficulty understanding and which fundamentally carry more risk, both in terms of the structure of the financial instruments and trustworthiness. That investors no longer trust is evidenced both by survey attitudes, with seven out of ten believing that CEOs cannot be trusted, and in their behavior. During June 2002, withdrawals from domestic mutual funds exceeded investments by $19 billion according to Banc of America Securities. From July 9, 2002 through July 23, 2002, the Dow dropped 1393 points and declined eleven of the twelve trading days during that period.

Some internal changes could help curb reporting abuses in companies. Enron’s Audit Committee represented a case study in what not to do on a corporate Board. In order to perform that function effectively, members of the audit committee need the following:

- Expertise in reading financial statements (Sarbanes-Oxley gets at this requirement, but only with regard to one person and an audit committee needs financial expertise around the table, particularly because there should be robust disagreement about financial reporting issues and singular expertise will not provide that debate)
- Business experience that is applicable to the company business
- No financial ties to the company other than director compensation fees
- No conflicts of interest in the performance of the director/audit committee role (Again, Sarbanes-Oxley now requires something that should have been inherently obvious prior to this legislation and Enron. The statute provides a list of activities that constitute a conflict of interest by definition, such as bookkeeping. Also, as noted, conflicts can be more complex than simply relationships with the company or company employees and the statute is not broad enough to cover these types of conflicts)

---

472. Scandals Shake Public Trust, supra note 69. Additionally 8 out 10 investors believe that CEOs “will take ‘improper actions’ to help themselves at the expense of their companies.” Id. 69% indicate that they will rely less on the advice of a broker or analyst. Id. Even the General Services Administration, the purchasing agent for the federal government, has indicated it may not continue to do business with WorldCom because of its concerns about its viability and ability to deliver service. Andrew Backover, SEC ‘Disappointed’ by WorldCom Report, USA TODAY, July 2, 2002, at B1.

473. Scandals Shake Public Trust, supra note 69.

No excessive compensation and caution in using golden handcuffs as a mean of retaining officers because of their tendency to manipulate stock price to satisfy their desires upon departure in terms of share price.

The performance of the audit committee work requires the following, a set of factors not addressed by Sarbanes-Oxley:

- Regular meetings
- Familiarity with company internal auditors and internal controls
- Knowledge of the policy debates that are ongoing among managers, internal auditors and external auditors about the financial reporting issues of the company
- Contact apart from management with both internal and external auditors; best practices indicate that the audit committee should interact regularly at each meeting with the internal auditors outside the presence of management and with the external auditors outside the presence of both the internal auditors and management. Again, Sarbanes-Oxley specifies this type of meeting, but not with the delineation outlined here for these independent meetings.
- Consultation with industry experts on key accounting issues in the industry

While the various rules on audit committee independence have been in place since the early 1990s, the definition of independence appears to be somewhat fluid. A conflict of interest occurs, not just when a member of the audit committee is an insider or is an outsider with extensive consulting or contract ties to management and the company. A conflict occurs when there is self-interest in going along with management. As noted in the discussion of Enron’s Board, conflicts can come in the form of excessive compensation, non-profit connections, consulting contracts, and political connections.

475. Warren Buffett proposed his three questions for audit committee members three years ago and continues to adhere to them as a means of curbing some of these problems:

If the auditor were solely responsible for preparation of the company's financial statements, would they have been done differently, in either material or nonmaterial ways? If differently, the auditor should explain both management's argument and his own. (2) If the auditor were an investor, would he have received the information essential to understanding the company's financial performance during the reporting period? (3) Is the company following the same internal audit procedure the auditor would if he were CEO? If not, what are the differences and why?

Dirty Rotten Numbers, supra note 256, at 74.

476. It is interesting to note that the Corporate Library, an investor consulting company, does not put much stock in credentials in Board members, pointing to the presence of former Stanford business dean, Robert Jaedicke, on the Enron Board and noting what happened to that company. The Corporate Library, run by Nell Minow and Robert Monks publishes grades for both the quality of Boards and their decisions. In addition, they counsel investors on how to oust poor CEOs as well as get through resolutions on reporting and accountability. Dyan Machan, I Am Watching, FORBES, Mar. 4, 2002, at 68.

477. See supra notes 165-166 and accompanying discussions.
But the remainder of the repairs for the crisis in confidence comes from an unequivocal return to honesty. Arthur Levitt was successful in obtaining more public disclosures from companies including Web broadcasts, yet because of the technical compliance with accounting rules we now have less information about the true financial status of companies than ever. Regulation, additional disclosures, and more widespread disclosures have not solved the problem, nor will the new legislation and SEC mandates prove to be solutions. Honesty cannot be legislated and the return of honesty is no small task because dishonesty is so pervasive. For example, eighty-two percent of executives confess that they cheat at the game of golf. Yet ninety-nine percent of those same CEOs believe that they are honest in business. The straightforward answer is something still evaded, despite the ongoing crisis. When WorldCom declared bankruptcy, its new CEO, John Sidgmore, appeared on the Today show to reassure. When asked, as a Board member, whether he voted to approve the $400 million loan to former CEO Bernie Ebbers, he was hesitant to answer. When pressed by Mr. Lauer, he responded that the Compensation Committee approved the loan. As a Board member, he only “ratified” the contract.

Apparently before we can demand honesty, we must define honesty. The demands of honesty will force businesses to focus on the basics of business, rather than the wizardry of complex financial instruments and estimates of future returns. A simple definition of honesty in financial reporting could consist of the following:

- If we didn’t earn it, we don’t report it.
- If we don’t earn it for awhile, wait to report it.
- If it cost us, it’s an expense.
- No creating new companies without a product, a purpose, and an independent management team.
- Your bonus is tied to your honesty in your numbers, not just the numbers themselves, and if the numbers are inflated, the bonus is returned.

---

480. Id.
481. Id.
482. Id. Creditors, run for your lives or get rid of this new CEO. This guy is slick and can’t admit that the loan was wrong or at least own up to having made the loan.
We have goals we want to reach, but we do not lie to meet the goals.
If we miss a goal, we say so, clearly, with an explanation and with a promise to do better.
We disclose when we know.
We don’t trade in stock before others are told.
We remember the following – if I were a shareholder on the outside would I want to know this information?483
Why am I doing what I am doing? Am I hiding something? Am I hoping things will get better?

Boards should send a clear signal to employees that if there is something in the earnings reports or operations that are troubling, they want to know, and should provide employees with an outlet for reporting, including anonymous reporting systems such as hotlines. With definitions of honesty, a means for expressing concerns and reporting dishonesty, the ethical culture of a company can change. Boards entrench that culture when they act on employee concerns and follow through.

These reforms assume not just an independent Board, but also a fiercely independent, indeed crotchety Board, not afraid of management and experienced enough to ask the right questions. The fix for the crisis in confidence is honesty, defined and the reinforced by a Board that is intolerant of one whit of departure from that definition.

The current crisis in confidence in the markets is one that springs from moral issues. Moral issues are resolved, not through additional Boards, independent Boards, or new regulations. Moral clarity offered by business leaders committed to honesty and a return to business fundamentals is necessary. The only issue is whether companies have the courage to return to not just sound moral ground, but the sound business practices that high ground demands. If that move falters, we stand vulnerable, on the low ground, to more perfect storms.

483. One anecdote about Enron characterizes the notion of the false impression art that it had perfected:

One senior Wall Street official recalls recently asking Enron officials whether the company had retained bankruptcy counsel. He was told no. He later found out that while the company hadn’t formally retained such representation, it had met with bankruptcy lawyers. “If you don’t ask the absolute right question, you don’t get the right answer,” he says. “Enron does that a lot.”

Scandals Shake Public Trust, supra note 69.
